Assisting the board today advising 14 board is myself executive officer, Mr. John Robertson to my right, Mr. Brian Lodge to my right, and Ms. Jessica Jahr counsel from the State Water Board.

MR. YOUNG: Okay. Thank you. This is the time and place for a hearing of the Central Coast Regional Water Control Board for adoption of administrative civil liability order against South San Luis Obispo County Sanitation District.

This hearing will be conducted in accordance with the hearing procedures that were provided to the parties. Designated parties are

suggest to my colleague that because we have a 2 court reporter here it's important that only one 3 person speak at a time, otherwise it becomes a 4 very, very difficult task for her to separate the 5 testimony out and keep it straight and clear and 6 understandable.

MR. THOMAS: At what point do we introduce the parties to give their three-minute testimonies?

MR. YOUNG: Great question. And I'm going to get to that probably at Page 3 of the statement that I've got it in front of me.

MR. THOMAS: Thanks.

14 MR. YOUNG: For purposes of this 15 hearing, the functions of staff and counsel are separated. Prosecution staff who are proposing 16 17 this action have had no communication with the 18 board members or the board's advisors, other than 19 for noncontroversial procedural matters.

The board's counsel has not advised the prosecution team in this matter for this hearing. The prosecution team consists of Michael Thomas, assistant executive officer, Harvey Packard, Matthew Buffleben, Leo Sarmiento, Jim Fischer, Todd Stanley. Is Todd Stanley here? Okay.

Page 6

Page 8

as follows. Regional board prosecution team and San Luis Obispo County. The designated parties 3 and their witnesses are subject to cross-examination. The prosecution staff will be 5 allowed 180 minutes for their presentation, 6 including opening statements, direct testimony, 7 cross-examination and rebuttal. 8

South San Luis Obispo County Sanitation District will be allowed 180 minutes for their presentation, including opening statement, direct testimony, cross-examination and rebuttal. Each designated party will be allowed five minutes for a closing statement.

All other persons are considered interested persons and will be allowed three minutes. And for those individuals please fill out the speaker card which you'll find the white cards in the back of the room. Fill them out 19 completely and hand them up here to Mr. Robertson 20 in the red shirt at the end of the table. The 21 chair may provide additional time at his discretion. A timer will be used. Board members, the advisory team and

24 staff counsel may ask questions to clarify testimony of a witness at any time. And let me

24 25

Page 7

Shelia Soderberg and Katie DiSimone. They are 2 advised by Julie Macedo, counsel from the State 3 Water Resources Control Board's Office of Enforcement.

For this hearing the board's advisory team consists of Jessica Jahr, counsel from the State Water Resources Control Board Office of Chief Counsel and Ken Harris interim acting executive officer to my left, John Robertson, Brian Lodge introduced earlier.

Each person who testifies at this 12 hearing shall begin by stating his or her name and 13 address unless the address has already been given. All persons who may testify at this hearing please 14 stand now, even if you don't plan to testify but are involved in this matter. Raise your right hand and take the following oath. Do you solemnly swear that the testimony which you will give in this matter is the truth? Has anybody said anything else? Okay. Thank you.

21 The order presentation hearing will be 22 as follows: Opening statements by prosecution 23 staff South San Luis Obispo County Sanitation District.

Two, direct testimony of Mr. Thoma,

```

                                                                     MS. THORME: Melissa Thorme from Downey
 9
    cross-examination by prosecution staff.
                                                          9
                                                              Brand representing South San Luis Obispo County
10
            Five, representatives of agencies, they
                                                              Sanitation District. And this is Olivia Wright
                                                              one of my associates. She will be helping me
11
    will be allowed three minutes each.
                                                         11
12
            And to answer your question, sir. Six,
                                                              present today. And then our parallel Sandra
13
    other interested persons, three minutes each.
                                                         13
                                                             Collier.
14
            Then we will have closing statements by
                                                         14
                                                                     MR. YOUNG: Great. And welcome
15
    first the South San Luis Obispo County, five
                                                         15
                                                              everybody.
16
                                                         16
    minutes, and followed by prosecution staff, five
                                                                     MS. THORME: Thank you.
                                                         17
17
    minutes.
                                                                     MR. YOUNG: All right. Let's begin our
18
            Cross-examination of each witness will
                                                         18
                                                             hearing. Let's have our opening statement by the
19
    occur after that witness' direct testimony has
                                                         19
                                                              prosecution team.
                                                         20
20
    concluded. The party offering the witness then
                                                                     MS. MACEDO: Great. Good morning chair
21
    may then offer redirect testimony.
                                                         21 members of the board. As I just said, my name is
22
                                                         22
                                                             Julie Macedo and I'm senior staff counsel with the
            At the close of the hearing the board
23
    members and advisory team will adjourn to closed
                                                         23
                                                              office of enforcement. It's my pleasure to
24
                                                         24
                                                              present today what's going to be an all-day event
    session to deliberate on the evidence as
    authorized by Government Code Section 11126.
                                                             and clearly a packed house.

affiliation of whether you have taken the oath before you testify. We will begin with testimony by staff. We've already rearranged this somewhat. Okay. At this time evidence should be introduced on the following issues. Whether the regional 10 board should issue, reject or modify the proposed ACL order. I will now begin the hearing.

So let's start with our opening statements.

MR. JEFFRIES: Before you do that I think that if anybody has speaker cards, they're over in that alcove on the left-hand side or the right-hand side, they should be brought over to Mr. Robertson. Because I saw some people wandering around that didn't know what to do with the speaker cards.

MR. YOUNG: These cards should go up here. And then than perhaps what counsel can do 23 is introduce yourselves because I don't think that 24 the board has met all of you.

MS. MACEDO: Sure. I'm Julie Macedo,

resource control engineer; Matthew Buffleben, senior water resource control engineer, and Katie DiSimone, water resource control engineer from region three. Leo Sarmiento, Harvey Packard and Michael Thomas have also been instrumental in bringing this case to hearing, although they will 11 not be testifying today.

This enforcement matter concerns a sanitary sewer overflow and while we're concerned -- while we've covered substantial information in the written materials, we'll cover the high points in today's evidentiary hearing.

We know that we're asking you to adopt an order with a significant penalty during a tough economic time, and we don't take that lightly. We 20 would not be asking you to do that if you did not 21 have good reason and we didn't think that penalty 22 is warranted or necessary.

We also know that many on dischargers 24 with similar delayed maintenance issues to the ones that the district faced in December of 2010

are watching this hearing and we hope that the board sends them a message that it is better to deal with such issues as they arise, then hope that problems don't pile up and lead to a spill that has far reaching public health consequences 6 and ultimately could cost more than addressing the 7 problems in the first place. Such a result would be both fiscally responsible and protective of 9 water quality. With that said, let's begin. 10

There are two main issues to decide in this hearing. The appropriate penalty under the 2010 enforcement policy and the volume discharge during the overflow events that occurred on December 19th and 20th of 2010.

On December 19th and 20th there was an 16 illegal sewer overflow and we're arguing over how to assess the penalty. While the district hasn't had a similar spill of this type before, this was a spill that affected more homes than any other spill since the state started collecting information in its database in 2007. As I said, this is a matter of great importance around the

No defense applies to this spill event. No defense under the Clean Water Act and no penalty is fair based on other sanitary sewer overflow cases decided under the policy around the state. Conservative based on the circumstances and volume of the spill, and appropriate because it is needed to send a message to this particular discharger.

The recommended penalty is also fair based on the total volume of sewage and storm water we've calculated was spilled over the two-day event. The penalty amount is in line with other ACLCs for SSOs.

While the district claims the overflow was beyond its control, the facts and testimony you will hear today will indicate otherwise. The penalty should bare that out.

16 As the board and the public will see, 17 the prosecution team's recommended penalty could have been higher, but the prosecution team made several conservative selections in the district's favor; however, we feel that the penalty we are ultimately recommending is appropriate, fair and necessary.

A common theme you'll hear today from several of the witnesses is that the cause of the spill could not be boiled down to a single cause.

Page 14

Page 16

defense in the district's permit. Both the Clean 2 Water Act and the district's permit prohibit 3 discharges of untreated or partially treated 4 wastewaters into waters of the United States. 5

District counsel has argued and will likely argue today that the district should pay no penalty for this overflow. Its argument is flawed for a number of reasons, not least of which that it completely misstates the definition of the upset and bypass defenses which do not apply to this discharge violations.

Furthermore, the district will argue for low or inappropriate factors to be assigned to various steps in the enforcement policy penalty methodology which the prosecution team feels are inappropriate due to the gravity of the spill, the harm incurred by the public, and the failure of the district to recognize its contribution to the spill by years of delayed maintenance.

The prosecution team's recommended penalty is approximately \$1.4 million, after an analysis that 1.1 million gallons of raw sewage and storm water was discharged and an analysis of the factors under the 2010 enforcement policy.

The prosecution team's recommended

1 There were several overdue preventative 2 maintenance issues and improper operating 3 procedures that led to the overflow and ultimately the size of the spill.

These issues included a pump discharge valve being closed when it should have been opened, emergency pump problems, a leaky influent gate that may not have been addressed since the plant's construction in the early 1960s, ponding 10 issues that allowed for water intrusion into 11 electrical pool boxes, and faulty electrical 12 issues.

13 Finally, this matter had a significant 14 component. One of the main factors in the penalty calculator is the harm caused by the spill, and 15 from the size of the audience and the amount of public comments the board has received this spill 17 18 has caused a lot of harm.

19 Now, the board can't directly 20 compensate the Oceano residents for any damage 21 caused by the sewage backup into homes, but up to 22 50 percent of the penalty amount can stay right here in region three and be spent on a 23 24 supplemental environmental project. The

prosecution team fully supports a use of the Page 17

I think that the board has an opportunity to send a message to the district total hopefully on behalf of the residents of Oceano and to other dischargers who failed to address preventative maintenance issues until discharges such as this happen. Thank you.

MR. YOUNG: Okay. And the district's opening statements.

MS. THORME: Good morning, board members, Mr. Chairman, advisory team. As I said, my name is Melissa Throme and I'm here representing the South San Luis Obispo County Sanitation District. This is such a big chunk of things to say, I'm just going to call them the district from now on. Just so everybody knows when I use that term that's what I mean.

So I'd first like to say that the district greatly appreciates the additional time that was given to allow us to tell our entire story. And the story is basically a district that 22 hasn't had a sewer spill in 25 years until this flood event occurred. And we hope today that your job will be taking a critical view of this case. 25 You are the judge and jury in this case and so I

being kept from us. We asked under Public Records

2 Act request, they were hiding documents under an

3 investigative privilege, which is supposed to be

maintained only for criminal cases. So we said 5

okay, if you're going to have this be a criminal 6 case then under the law you have to give us all

7 the exculpatory evidence, things that would know

maybe the district wasn't at fault. And they

9 denied us under then as well. So we are at a

10 little bit of a disadvantage in this case.

So the other theme that I have is that 12 on the other hand it seems to me a little bit like 13 playing archery with a moving target. And I'll 14 give you one example of that. One is on its 15 private sewer lateral in-home spills. And under 16 the sanitary sewer overflow permit it is not required that a district report in-home spills. And that administrative civil liability complaint in this matter alleged that these were category 20 two spills and were not properly certified, and that was in paragraph 24 of the complaint.

So when the district showed the prosecution team in our brief that only category one spills have to be certified within a certain time frame then the target changed. And now in

Page 18

Page 20

want you to listen to both sides and not just take the prosecution team's side on this, just to listen with a critical ear.

As I was sitting trying to think of a theme for our opening statement I couldn't really decide between two different things. So I'm going to tell you both of my themes that I had for todav.

So on the one hand this case feels a 10 little to me like a poker game. And the poker game is where the prosecution team has all the 12 cards, all the face cards and all the aces, and we 13 have to have our cards laying up on the table. 14 And why I say that is because the district has 15 been at a disadvantage from the beginning.

The state has all the investigative 17 power. They can send letters and say tell us this 18 and tell us that. In fact, they sent letters saying please tell us that the advantages and 20 disadvantages of each of the spill methodologies that you put forth. And the district has to answer all those questions or they can be under penalty by the state for not doing so. 23

On the other hand, when we asked for 25 documents from the prosecution team they were

the final brief the prosecution team is arguing 2 that these are category one spills and need to be 3 certified. And now they are the most important

4 part of the prosecution team's case. And they've

5 been out interviewing people, local residents, 6 having meetings at local cantinas and trying to

7 get people to come and testify, and at the same 8 time they're keeping all that evidence of those

9 interviews from the district.

10 So our theme for today is asking the 11 board members to keep in mind this uneven playing 12 field and to keep in mind the actual facts of this 13 case as you consider and make a decision today. 14 Thank you.

MR. YOUNG: Okay. Thank you. Kind of a point of clarification, aren't we also determining first liability before we get into any kind of a penalty calculation? Your presentation suggested it's simply a matter of us determining how much. Don't we first have to look --

21 MS. MACEDO: I think everyone 22 understands that there was a spill --

23 MR. YOUNG: Correct.

24 MS. MACEDO: -- on December 19th and 25 20th.

		1	
1	MR. YOUNG: Right.	1	MS. MACEDO: Okay.
2	MS. MACEDO: To the extent that the	2	MS. MACEDO. ORBY.
3	district isn't denying that there is a spill you	3	CROSS-EXAMINATION
4	can reach the foundational question whether the	4	(Bill Thoma)
5	district was responsible for the spill or if	5	BY MS. MACEDO:
6	there's a defense and then what amount of penalty	6	Q. Okay. Do you have your declaration in
7	should apply. We don't think there's a full	7	front of you, Mr. Thoma?
8	defense, but the spill did occur. So you're not	8	A. Yes, I do.
9	answering the question of whether the spill	9	Q. When were you contacted to provide a
10	occurred.	10	declaration in this matter?
11	MR. YOUNG: Okay. I was curious	11	A. Approximately two months ago, a month
12	whether it was a preliminary question to be	12	and a half ago, something like that.
13	answered first.	13	Q. What materials were you given to
14	MS. MACEDO: We're past the point of	14	review?
15	whether the spill occurred. Okay.	15	A. I reviewed documents that were provided
16	MR. YOUNG: Okay. All right. Let's	16	to me in terms of the State Water Quality Control
17	begin then with Mr. Thoma, correct? And so we	17	Board's complaint. I reviewed I made a visit
18	will now begin. Who has our clock, who is our	18	to the site. I conducted an interview with the
19	clock keeper? Okay.	19	operators that were on duty at the site. I have
20	MR. THOMA: Good morning, board	20	reviewed I have knowledge of some of the work
21	members. My name is Bill Thoma, as was stated. I	21	that was done at that plant, as our firm has done
22	live at 3562 Empleo Street, San Luis Obispo,	22	some design work at that plant. And that's about
23	California. I did take the oath and my	23	
24	declaration is true and accurate as presented, and	24	MS. JAHR: I don't want to interrupt
25	so I would like to just the major conclusion to	25	you, if you're referencing an exhibit can you just
	Page 22		Page 24
	1 450 22		1 450 21
1	my report was that that I was looking at the	1	say that what that is for all board members if we
2	electrical issues related to what occurred on the	2	want to look at it?
3	date of December 19th.	3	MS. MACEDO: Absolutely. Yes. If I
4	And my conclusion is that the cause of	4	refer to something specific.
5	the failure of the electrical system on that date	5	MS. JAHR: You were referencing the
6	was a function of seals lacking water seals	6	declaration, right?
7	lacking in a number of conduits that entered into	7	MS. MACEDO: Oh, I'm sorry. Yeah I was
8	the influent building. And that is the cause of	8	referring to the declaration which is Exhibit 25
9	this electrical issue. It had nothing to do with	9	submitted with the district's materials. I
10	maintenance or ongoing maintenance or operations	10	apologize.
11	or replacement or deferred maintenance.	11	MS. JAHR: Thank you.
12	I welcome any questions you might have	12	BY MS. MACEDO:
13	about my report.	13	Q. Were you provided with all of the
14	MR. JEFFRIES: The sealed that	14	briefs in this action? You said you reviewed the
15	MR. YOUNG: I think what we should do	15	complaint. Did you review the prosecution team's
16	is let them go ahead and give their	16	opening or rebuttal briefs?
17	cross-examination and then when they're done we	17	A. I do not recall.
18	can do follow-up.	18	Q. You do not recall
19	MS. MACEDO: Mr. Thoma is a district	19	A. I'm not sure that I can identify
20	witness so direct would go first?	20	exactly what you're talking about.
21	MR. YOUNG: Correct.	21	Q. Okay. The prosecution team's submitted
22	MS. THORME: We're not going to have	22	an evidentiary brief on July 27th.
23	any direct examination.	23	A. I don't recall the date of the document
24	MR. YOUNG: Okay. All right. Then the	24	that I reviewed. I'm sorry, I think I may have
25	prosecution, do you have any cross-examination?	25	but I don't recall if that's the exact exhibit.
	Page 23		Page 25

1	If you want to show it to me I might recall.	1	Q. I want to show you one item, and I'll
2	Q. Okay. Let's go about it a different	2	pop it up for board members. This is Exhibit 2
3	way. You said you were contacted a couple months	3	submitted with the prosecution team's opening
4	ago to prepare your declaration?	4	brief, and I will hand the witness a copy. Does
5	A. Yes.	5	counsel need a copy or do you have it handy?
6	Q. Okay. You prepared that declaration in	6	MS. THORME: We don't need it.
7	assistance with attorneys at Downey Brand?	7	BY MS. MACEDO:
8	A. They reviewed it before it was	8	Q. So if I'm understanding your
9	submitted; however, I developed this brief on my	9	declaration correctly, you're an expert in
10	own based on my own investigation and my own	10	electrical matters, correct?
11	interviews and conducted my own investigation.	11	A. Yes.
12	Q. When did you provide the first draft to	12	Q. Okay. If you could turn to the final
13	Downey Brand?	13	page of the exhibit, Page 3, and I'll scroll down
14	A. I can't tell you the date. It was	14	to Page 3 on the screen. I will represent to you
15	probably about a week before the final was	15	that this is an excerpt from a budget from the
16	completed.	16	district's 2010 to 2011 budget, taking about a
17	Q. Okay. Their submission was due in	17	proposed electrical system upgrade. Take as much
18	August, so approximately August?	18	time as you need to read it.
19	A. Yes.	19	A. Okay. I've read it.
20	Q. Okay. Have you reviewed any documents	20	Q. Have you seen this document?
21	since then?	21	A. Yes, I have.
22	A. No, I haven't.	22	Q. Okay. Had you considered this document
23	Q. Okay. So you have not reviewed the	23	prior to submitting your declaration?
24	prosecution team's rebuttal brief?	24	A. Yes, I have.
25	A. I don't believe so.	25	Q. Okay. In your expert opinion is it
	Page 26		Page 28
	1 age 20		1 agc 20
1	O. Okay And in your declaration you	1	hest standard of care to allow wiring that is
1 2	Q. Okay. And in your declaration you describe yourself as an expert on electrical	1 2	best standard of care to allow wiring that is

A. No. Q. Okay. Would you describe yourself as an expert on grading or ponding issues? A. No. Q. Would you describe yourself as an expert on leaky influent gates? A. No.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	deteriorating due to groundwater intrusion to continue to not be upgraded? A. Wiring that is deteriorating, correct, would not be adequate to remain in service; however, I have found that not all the wiring in the facility was deteriorating. Q. That wasn't my question. You understand my question. So separate and apart from the cause of the spill, as an expert electrician, the reason you're here today, deteriorating groundwater or deteriorating wiring from groundwater intrusion is not the best standard of care? A. Deteriorating wire is not that has not been replaced is not a good standard of care. Q. Thank you. A. If identified as deteriorating. Not all the wiring in that facility was
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	describe yourself as an expert on electrical issues, correct? A. Correct. Q. Okay. Would you describe yourself as an expert on wastewater treatment plants? A. I would say I have experience in wastewater treatment plants. We've done a number of projects at wastewater treatment plants. I would expect I would say yes. Q. Okay. Would you describe yourself as an expert on standard operating procedures related to valves? A. No. Q. Okay. Would you describe yourself as an expert on grading or ponding issues? A. No. Q. Would you describe yourself as an expert on leaky influent gates?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	deteriorating due to groundwater intrusion to continue to not be upgraded? A. Wiring that is deteriorating, correct, would not be adequate to remain in service; however, I have found that not all the wiring in the facility was deteriorating. Q. That wasn't my question. You understand my question. So separate and apart from the cause of the spill, as an expert electrician, the reason you're here today, deteriorating groundwater or deteriorating wiring from groundwater intrusion is not the best standard of care? A. Deteriorating wire is not that has not been replaced is not a good standard of care. Q. Thank you. A. If identified as deteriorating. Not all the wiring in that facility was deteriorating.

TRANSCRIPT OF HEARING

1	MS. MACEDO: Thank you. Nothing	1	MR. YOUNG: Okay. And in your review
2	further for this witness.	2	of the information that was provided to you did
3	MR. YOUNG: Okay. Any board questions?	3	you find any electrical code violations?
4	Mr. Jeffries.	4	MR. THOMA: Of the documents or of the
5	MR. JEFFRIES: Good morning, sir.	5	facility?
6	THE WITNESS: Good morning.	6	MR. YOUNG: Of the facility, you know,
7	MR. JEFFRIES: Nice to have you have	7	anything that you thought you mentioned the
8	here.	8	seals. I'm wondering if you picked up on anything
9	THE WITNESS: Thank you.	9	else that may have been involved in causing the
10	MR. JEFFRIES: I have probably three	10	sequence of events that caused this spill?
11	questions for you. One is the conduits that you	11	MR. THOMA: There was nothing that I
12	referred to was the seals that were faulty, were	12	saw that was a code violation that resulted in any
13	they below grade?	13	of the outage condition that occurred. What I
14	MR. THOMA: The conduits were below	14	would say is that the seals were a violation
15	grade, yes.	15	themselves for having not been placed in the first
16	MR. JEFFRIES: Is there a periodic	16	place during construction.
17	maintenance procedure to examine those particular	17	MR. YOUNG: Okay.
18	conduits that are below grade for water intrusion?	18	MR. THOMA: That should have taken
19	MR. THOMA: A wire in conduit below	19	place probably back in 1986, '87.
20	grade is expected to be in water. By definition	20	MR. YOUNG: Thank you. Mr. Jordan and
21	it's considered a wet location, so the answer is	21	then Mr. Johnston.
22	the so it is a wet location. The seals are not	22	MR. JORDON: Good morning, Mr. Thoma.
23	normally in any experience that I've had been a	23	The description you're giving of what you
24	function of any inspection proceeding.	24	inspected is wiring and conduit. The picture up
25	MR. JEFFRIES: So you're saying that	25	on that was up there a moment ago is not wiring
	Page 30		Page 32
	rage 30		1 age 32
1	once the seal's placed then that should be	1	and conduit it looks like it's loose wiring in a
1 2	once the seal's placed then that should be serviceable for the life of that facility?	1 2	and conduit, it looks like it's loose wiring in a
2	serviceable for the life of that facility?	2	vault. Now, did you observe any wiring that more
2 3	serviceable for the life of that facility? MR. THOMA: Yes.	2	vault. Now, did you observe any wiring that more closely resembles what was up there on the board?
2 3 4	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is	2 3 4	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I
2 3 4 5	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet?	2 3 4 5	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please.
2 3 4 5 6	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet? MR. THOMA: Yes, it is.	2 3 4 5 6	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please. MR. JORDON: Okay. You described
2 3 4 5 6 7	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet? MR. THOMA: Yes, it is. MR. JEFFRIES: Is the wiring, is it a	2 3 4 5 6 7	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please. MR. JORDON: Okay. You described conduit and wiring, that's wiring that's in a wet
2 3 4 5 6 7 8	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet? MR. THOMA: Yes, it is. MR. JEFFRIES: Is the wiring, is it a plastic coating or a cloth coating?	2 3 4 5 6 7 8	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please. MR. JORDON: Okay. You described conduit and wiring, that's wiring that's in a wet location and sealed, and this is supposed to be
2 3 4 5 6 7 8 9	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet? MR. THOMA: Yes, it is. MR. JEFFRIES: Is the wiring, is it a plastic coating or a cloth coating? MR. THOMA: The wiring that was	2 3 4 5 6 7 8	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please. MR. JORDON: Okay. You described conduit and wiring, that's wiring that's in a wet location and sealed, and this is supposed to be there.
2 3 4 5 6 7 8 9	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet? MR. THOMA: Yes, it is. MR. JEFFRIES: Is the wiring, is it a plastic coating or a cloth coating? MR. THOMA: The wiring that was installed?	2 3 4 5 6 7 8	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please. MR. JORDON: Okay. You described conduit and wiring, that's wiring that's in a wet location and sealed, and this is supposed to be there. MR. THOMA: Correct.
2 3 4 5 6 7 8 9 10	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet? MR. THOMA: Yes, it is. MR. JEFFRIES: Is the wiring, is it a plastic coating or a cloth coating? MR. THOMA: The wiring that was installed? MR. JEFFRIES: Yes. Is it a	2 3 4 5 6 7 8 9 10	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please. MR. JORDON: Okay. You described conduit and wiring, that's wiring that's in a wet location and sealed, and this is supposed to be there. MR. THOMA: Correct. MR. JORDON: When I look at that
2 3 4 5 6 7 8 9 10 11	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet? MR. THOMA: Yes, it is. MR. JEFFRIES: Is the wiring, is it a plastic coating or a cloth coating? MR. THOMA: The wiring that was installed? MR. JEFFRIES: Yes. Is it a submersible type of wiring?	2 3 4 5 6 7 8 9 10 11	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please. MR. JORDON: Okay. You described conduit and wiring, that's wiring that's in a wet location and sealed, and this is supposed to be there. MR. THOMA: Correct. MR. JORDON: When I look at that picture it's not in the conduit, it doesn't look
2 3 4 5 6 7 8 9 10 11 12 13	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet? MR. THOMA: Yes, it is. MR. JEFFRIES: Is the wiring, is it a plastic coating or a cloth coating? MR. THOMA: The wiring that was installed? MR. JEFFRIES: Yes. Is it a submersible type of wiring? MR. THOMA: Yes, it's THW wire which is	2 3 4 5 6 7 8 9 10	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please. MR. JORDON: Okay. You described conduit and wiring, that's wiring that's in a wet location and sealed, and this is supposed to be there. MR. THOMA: Correct. MR. JORDON: When I look at that picture it's not in the conduit, it doesn't look like it's supposed to be in a wet location
2 3 4 5 6 7 8 9 10 11 12 13 14	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet? MR. THOMA: Yes, it is. MR. JEFFRIES: Is the wiring, is it a plastic coating or a cloth coating? MR. THOMA: The wiring that was installed? MR. JEFFRIES: Yes. Is it a submersible type of wiring? MR. THOMA: Yes, it's THW wire which is the wet the 'W' means wet.	2 3 4 5 6 7 8 9 10 11 12 13	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please. MR. JORDON: Okay. You described conduit and wiring, that's wiring that's in a wet location and sealed, and this is supposed to be there. MR. THOMA: Correct. MR. JORDON: When I look at that picture it's not in the conduit, it doesn't look like it's supposed to be in a wet location undergrade. So my question was did you observe
2 3 4 5 6 7 8 9 10 11 12 13 14 15	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet? MR. THOMA: Yes, it is. MR. JEFFRIES: Is the wiring, is it a plastic coating or a cloth coating? MR. THOMA: The wiring that was installed? MR. JEFFRIES: Yes. Is it a submersible type of wiring? MR. THOMA: Yes, it's THW wire which is the wet the 'W' means wet. MR. JEFFRIES: I understand. All	2 3 4 5 6 7 8 9 10 11 12 13 14 15	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please. MR. JORDON: Okay. You described conduit and wiring, that's wiring that's in a wet location and sealed, and this is supposed to be there. MR. THOMA: Correct. MR. JORDON: When I look at that picture it's not in the conduit, it doesn't look like it's supposed to be in a wet location undergrade. So my question was did you observe any wiring in your review that resembled that
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet? MR. THOMA: Yes, it is. MR. JEFFRIES: Is the wiring, is it a plastic coating or a cloth coating? MR. THOMA: The wiring that was installed? MR. JEFFRIES: Yes. Is it a submersible type of wiring? MR. THOMA: Yes, it's THW wire which is the wet the 'W' means wet. MR. JEFFRIES: I understand. All right. Thank you, sir.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please. MR. JORDON: Okay. You described conduit and wiring, that's wiring that's in a wet location and sealed, and this is supposed to be there. MR. THOMA: Correct. MR. JORDON: When I look at that picture it's not in the conduit, it doesn't look like it's supposed to be in a wet location undergrade. So my question was did you observe any wiring in your review that resembled that picture?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet? MR. THOMA: Yes, it is. MR. JEFFRIES: Is the wiring, is it a plastic coating or a cloth coating? MR. THOMA: The wiring that was installed? MR. JEFFRIES: Yes. Is it a submersible type of wiring? MR. THOMA: Yes, it's THW wire which is the wet the 'W' means wet. MR. JEFFRIES: I understand. All right. Thank you, sir. MR. YOUNG: I have a few questions for	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please. MR. JORDON: Okay. You described conduit and wiring, that's wiring that's in a wet location and sealed, and this is supposed to be there. MR. THOMA: Correct. MR. JORDON: When I look at that picture it's not in the conduit, it doesn't look like it's supposed to be in a wet location undergrade. So my question was did you observe any wiring in your review that resembled that picture? MR. THOMA: I have reviewed that box.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet? MR. THOMA: Yes, it is. MR. JEFFRIES: Is the wiring, is it a plastic coating or a cloth coating? MR. THOMA: The wiring that was installed? MR. JEFFRIES: Yes. Is it a submersible type of wiring? MR. THOMA: Yes, it's THW wire which is the wet the 'W' means wet. MR. JEFFRIES: I understand. All right. Thank you, sir. MR. YOUNG: I have a few questions for you. I noticed in my reading of the brief	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please. MR. JORDON: Okay. You described conduit and wiring, that's wiring that's in a wet location and sealed, and this is supposed to be there. MR. THOMA: Correct. MR. JORDON: When I look at that picture it's not in the conduit, it doesn't look like it's supposed to be in a wet location undergrade. So my question was did you observe any wiring in your review that resembled that picture? MR. THOMA: I have reviewed that box. And to clarify, is that box is below grade and it
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet? MR. THOMA: Yes, it is. MR. JEFFRIES: Is the wiring, is it a plastic coating or a cloth coating? MR. THOMA: The wiring that was installed? MR. JEFFRIES: Yes. Is it a submersible type of wiring? MR. THOMA: Yes, it's THW wire which is the wet the 'W' means wet. MR. JEFFRIES: I understand. All right. Thank you, sir. MR. YOUNG: I have a few questions for you. I noticed in my reading of the brief mentions of plumbing code, but I was interested in	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please. MR. JORDON: Okay. You described conduit and wiring, that's wiring that's in a wet location and sealed, and this is supposed to be there. MR. THOMA: Correct. MR. JORDON: When I look at that picture it's not in the conduit, it doesn't look like it's supposed to be in a wet location undergrade. So my question was did you observe any wiring in your review that resembled that picture? MR. THOMA: I have reviewed that box. And to clarify, is that box is below grade and it is anticipated that the water would be present
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet? MR. THOMA: Yes, it is. MR. JEFFRIES: Is the wiring, is it a plastic coating or a cloth coating? MR. THOMA: The wiring that was installed? MR. JEFFRIES: Yes. Is it a submersible type of wiring? MR. THOMA: Yes, it's THW wire which is the wet the 'W' means wet. MR. JEFFRIES: I understand. All right. Thank you, sir. MR. YOUNG: I have a few questions for you. I noticed in my reading of the brief mentions of plumbing code, but I was interested in whether the electric code applies to this	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please. MR. JORDON: Okay. You described conduit and wiring, that's wiring that's in a wet location and sealed, and this is supposed to be there. MR. THOMA: Correct. MR. JORDON: When I look at that picture it's not in the conduit, it doesn't look like it's supposed to be in a wet location undergrade. So my question was did you observe any wiring in your review that resembled that picture? MR. THOMA: I have reviewed that box. And to clarify, is that box is below grade and it is anticipated that the water would be present occasionally incidentally in that box. So the
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet? MR. THOMA: Yes, it is. MR. JEFFRIES: Is the wiring, is it a plastic coating or a cloth coating? MR. THOMA: The wiring that was installed? MR. JEFFRIES: Yes. Is it a submersible type of wiring? MR. THOMA: Yes, it's THW wire which is the wet the 'W' means wet. MR. JEFFRIES: I understand. All right. Thank you, sir. MR. YOUNG: I have a few questions for you. I noticed in my reading of the brief mentions of plumbing code, but I was interested in whether the electric code applies to this facility.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please. MR. JORDON: Okay. You described conduit and wiring, that's wiring that's in a wet location and sealed, and this is supposed to be there. MR. THOMA: Correct. MR. JORDON: When I look at that picture it's not in the conduit, it doesn't look like it's supposed to be in a wet location undergrade. So my question was did you observe any wiring in your review that resembled that picture? MR. THOMA: I have reviewed that box. And to clarify, is that box is below grade and it is anticipated that the water would be present occasionally incidentally in that box. So the seals are between that box and the inside of the
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	serviceable for the life of that facility? MR. THOMA: Yes. MR. JEFFRIES: And is this location, is it normally an area that is wet? MR. THOMA: Yes, it is. MR. JEFFRIES: Is the wiring, is it a plastic coating or a cloth coating? MR. THOMA: The wiring that was installed? MR. JEFFRIES: Yes. Is it a submersible type of wiring? MR. THOMA: Yes, it's THW wire which is the wet the 'W' means wet. MR. JEFFRIES: I understand. All right. Thank you, sir. MR. YOUNG: I have a few questions for you. I noticed in my reading of the brief mentions of plumbing code, but I was interested in whether the electric code applies to this facility. MR. THOMA: Of course, yes.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	vault. Now, did you observe any wiring that more closely resembles what was up there on the board? MR. THOMA: I'm sorry, I'm not sure I understand your question, please. MR. JORDON: Okay. You described conduit and wiring, that's wiring that's in a wet location and sealed, and this is supposed to be there. MR. THOMA: Correct. MR. JORDON: When I look at that picture it's not in the conduit, it doesn't look like it's supposed to be in a wet location undergrade. So my question was did you observe any wiring in your review that resembled that picture? MR. THOMA: I have reviewed that box. And to clarify, is that box is below grade and it is anticipated that the water would be present occasionally incidentally in that box. So the seals are between that box and the inside of the building where the damage and the incident

```
wires from -- through a conduit you -- when you
                                                              pump; is that correct?
    get from one building to another there's too many
                                                          2
                                                                      MR. THOMA: Correct. It's at the
                                                          3
    90 degree elbows to go through. So you have to
                                                              exterior mid-level landing in the influent pump
    place boxes on the site for pulling. So that's a
                                                          4
                                                              area. And as I understood it from the plans was
    pull box where they pull wires to, and then you go
                                                          5
                                                              an emergency shut off for that confined space.
 6
    into the building. Where it goes into the
                                                          6
                                                                      MR. JOHNSTON: And what I'm seeing on
 7
                                                          7
    building from the exterior box is where the seals
                                                              the diagram is that where the conduit entered the
 8
    were to have been placed.
                                                          8
                                                              building there should have been a seal on each
 9
            MR. JORDON: But still my question was
                                                          9
                                                              side of the wall, correct?
10
    did you observe any situation similar to that
                                                         10
                                                                      MR. THOMA: I don't know that it was on
11
    where there was bare wiring that was decomposing
                                                         11
                                                              either side or if it was on just the one side. I
12
    due to submerging water?
                                                              believe it would -- I believe it would have been
13
            MR. THOMA: No, I did not.
                                                         13
                                                              indicated to be just on one side.
14
            MR. JORDON: Thank you.
                                                         14
                                                                      MR. JOHNSTON: Now, would there also
15
            MR. YOUNG: Mr. Johnston.
                                                         15 have been seals on the conduit in the box, in that
16
            MR. JOHNSTON: Mr. Thoma, I've just
                                                         16
                                                              box that was -- that got flooded?
17
    been reviewing your declaration, and tell me if
                                                         17
                                                                      MR. THOMA: Not necessarily, and most
18
    I'm correct, it appears that your analysis of what
                                                         18
                                                             times not in the box.
19
    happened then is that there was a shunt trip
                                                         19
                                                                      MR. JOHNSTON: And when I say the
20
                                                         20
    switch in the box we've been talking about, which
                                                              "box," I'm not referring to the box that contains
21 is below grade, expected to get water on occasion,
                                                         21
                                                              the shunt trip switch, I'm referring to the pull
                                                         22
    and that the conduit going into the box containing
                                                              box that was flooded.
23
    the shunt trip switch was lacking seals which had
                                                         23
                                                                      MR. THOMA: The vault?
24 been specified in the original 1986 construction
                                                         24
                                                                      MR. JOHNSTON: The vault, yes.
                                                         25
    which the original electrical contractor hadn't
                                                                      MR. THOMA: No, they would normally not
                                                Page 34
                                                                                                          Page 36
                                                          1
                                                              be in the vault.
 1
    put in?
 2
                                                          2
            MR. THOMA: Correct.
                                                                     MR. JOHNSTON: Okay. So you would not
 3
            MR. JOHNSTON: Because of the lack of
                                                          3
                                                              normally have seals in a vault. What I'm
                                                          4
                                                              wondering about is you assert in your declaration
    the seals that water came into that box and that
 5
    that tripped and therefore tripped the breaker
                                                          5
                                                              that had the work that was considered for
 6
    controlling all four influent pumps; is that
                                                          6
                                                              budgeting in I think it was 2004, 2005 been done,
7
                                                          7
    correct?
                                                              that even had they pulled new wire through there
8
                                                              that they would not have known that there were no
            MR. THOMA: It tripped one circuit
9
    breaker, that impact then tripped all four pumps.
                                                              seals, or they would not have known that seals
10
    There's an exhibit on the board where I might just
                                                         10
                                                             were required, to put it more correctly. They
11
                                                         11
                                                              would have known there were no seals because they
    point out real quickly, right there there's the
12
    original construction documents for 1986. This is
                                                         12
                                                              were able to pull the wire cable through?
13
    exhibit -- I believe it's D -- I mean A in your --
                                                         13
                                                                     MR. THOMA: Correct.
                                                         14
                                                                     MR. JOHNSTON: But they would not have
    in my declaration. And those words right there
15
    (indicating) I believe state all conduit -- seal
                                                         15
                                                              known that seals were required?
16
    all conduits typical. And the little dots there
                                                         16
                                                                     MR. THOMA: Correct.
                                                         17
17
    indicate the seal locations.
                                                                     MR. JOHNSTON: And that's what I'm
18
            The box was right outside here. The
                                                             trying to understand. It seems to me if -- or at
19
    seals were between it and the inside building.
                                                              least that's what I'm trying to get my head
    The water intruded from the box outside in through
                                                         20
                                                              around. If you've got a contractor doing that
21
    those conduits without the seals and into the
                                                         21
                                                             budgeted work or that work that was considered for
22
                                                         22
                                                             budgeting in 2004, 2005, they're going to pull
    building. That's the location of the shunt trip
23
    switch.
                                                         23
                                                             wire presumably from that vault to this shunt trip
24
                                                         24
            MR. JOHNSTON: Okay. So the shunt trip
                                                              switch box in the pump room, and would they be
                                                         25 referring to this power plant that we're looking
    switch is in the building containing the influent
                                                Page 35
                                                                                                          Page 37
```

```
at here?
                                                             Again, I don't -- I'm not trying to be difficult.
                                                          2
                                                             I just -- I don't know what -- how the plans and
            MR. THOMA: It's possible that they
 3
    could be. It's possible -- it's more likely that
                                                             specifications called for that to be completed. I
    they would not, but that's a hypothetical
                                                             did not see the plans and specifications.
                                                          5
                                                                     MR. JOHNSTON: Thank you, sir.
    question. I'm not sure that they would or would
 6
                                                          6
                                                                     MR. YOUNG: Okay. Any other board?
    not.
 7
                                                          7
            MR. JOHNSTON: Well, how would they
                                                             Dr. Wolff.
    know where -- I mean, to pull wire you need to
                                                          8
                                                                     MR. WOLFF: Mr. Thoma, when you talked
    know where both ends of it are?
                                                          9
9
                                                             about sealing the conduits, isn't the general
10
            MR. THOMA: Well, replacing the wire is
                                                         10
                                                             industry practice to seal to prevent intrusion of
11 a matter of pulling the wire out from one end,
                                                         11
                                                             water in conduits?
12 pulling the rope in, pulling the new wire in
                                                         12
                                                                     MR. THOMA: I'm sorry?
13
                                                         13
    re-terminating.
                                                                     MR. WOLFF: Isn't the seal location
14
                                                         14
            MR. JOHNSTON: Right. So you have to
                                                             generally placed at a point that would prevent
15 know where both ends are?
                                                         15
                                                             water intrusion into the conduits?
16
                                                         16
            MR. THOMA: Yes, that's correct.
                                                                     MR. THOMA: Yes.
17
                                                         17
            MR. JOHNSTON: And you --
                                                                     MR. WOLFF: Therefore, shouldn't the
18
            MR. THOMA: But you don't know what the
                                                         18
                                                             seal be located in the J-box rather than -- the
19 route of that conduit takes to get from point A to
                                                         19
                                                             junction box rather than in the lower elevation of
                                                         20 a facility?
    point B. You see the end of it on this end, you
21 see the end of it at this side, and there's no way
                                                         21
                                                                     MR. THOMA: There's no code that talks
                                                         22 about the location of a seal, it strictly talks
22 to know if there's a hydraulic issue in that
23
    conduit or not.
                                                         23
                                                             about that you should seal to prevent moisture
24
                                                             intrusion. I think that you could arguing either
            MR. JOHNSTON: I understand, but what I
                                                         24
25 quess what I'm asking you is, if I'm the
                                                             direction, it's not necessarily going to be the
                                                Page 38
                                                                                                         Page 40
    electrician going into the vault and I'm told to
                                                          1
                                                             location of the seal in the box.
    replace this wire I have to know where both ends
                                                          2
                                                                     MR. WOLFF: If the National Electric
 3
    of the wire are. I have to look at some sort of
                                                          3
                                                             Code requires sealing wet locations, wouldn't that
                                                          4
    plans, right, to know where the wire's going, to
                                                             indicate that the seal should be at a point that
                                                          5
 5
    know where I'm pulling to, right?
                                                             prevents water intrusion into the conduit?
 6
            MR. THOMA: In pull boxes not
                                                          6
                                                                     MR. THOMA: No, I would disagree with
7
                                                          7
    necessarily, no. I mean you're pulling wire from
                                                             that.
                                                          8
 8
    one location, you're identifying it by pulling on
                                                                     MR. WOLFF: So you could therefore have
                                                         9
                                                             moisture and water intrusion that would remain in
    it and identifying it at the other location. You
10
    don't necessarily need to know where it's going.
                                                         10
                                                             the conduit?
11
    You're just simply replacing that wire for wire.
                                                         11
                                                                     MR. THOMA: You want to prevent water
12
            MR. JOHNSTON: Okay. So then if you --
                                                         12
                                                             from running into a conduit, but there's always
13
    vou're an electrical contractor, right?
                                                         13
                                                             going to be water in a conduit just by virtue of
14
                                                             condensation. Nearly every wire you pull out of
            MR. THOMA: Yes.
                                                         14
15
                                                             the underground conduit is wet, when it comes out
                                                         15
            MR. JOHNSTON: So if you were -- if you
16 were responsible if that budgeted -- or that job
                                                         16
                                                             it's wet because of the condensation in the
17
    that was considered in the budget, replacing that
                                                         17
                                                             conduit itself. And sometimes it's immersed in
    wire with waterproof wire, would you have been
                                                         18
                                                             water for its entire life.
19
    working from plans to do it or would you have
                                                         19
                                                                     MR. WOLFF: In the circumstance that we
20
                                                         20
    simply gone and pulled wire to see what wiggled on
                                                             have here there had been a history of water
21
    the other end?
                                                         21
                                                             ponding into the junction box based on some
22
                                                         22
                                                             evidence that I had read. Therefore, wouldn't the
            MR. THOMA: I would -- that's a
                                                         23
                                                             consideration of putting the seal in the box be a
23 hypothetical question. I don't know what I would
                                                         24
                                                             better location than a seal in the basement?
    have done unless I had a set of plans and
                                                         25
                                                                     MR. THOMA: Would it be a better
    specifications to answer that question from.
                                                Page 39
                                                                                                         Page 41
```

```
location? It possibly could be, that's conjecture
                                                             applications, that's correct.
    on our part. We weren't, again, asked to design
                                                         2
                                                                     MR. WOLFF: Okay. Outside of
                                                         3
 3
                                                             residential applications?
    the facility, nor was the operator the designer of
    the facility as I understand it. So I can answer
                                                         4
                                                                     MR. THOMA: Outside of residential
                                                         5
    that question, would it be better, possibly.
                                                             applications, commercial applications, industrial
                                                         6
 6
    There were drains in the boxes that drained to
                                                             applications, it's not a requirement; it is often
                                                         7
 7
    other locations. I can't argue that it could have
                                                             recommended.
    been a better location. It's not necessarily the
                                                         8
                                                                     MR. WOLFF: What's the -- I couldn't
9
                                                         9
    only location, however.
                                                             see on the single line diagram the capacity of the
10
            MR. WOLFF: So when you stated earlier
                                                        10
                                                             main breaker. I assume it's a 480 volt three
11
    with your experience that you do provide
                                                        11
                                                             phase system?
    electrical services in various facilities, so
                                                        12
                                                                     MR. THOMA: It was a 480 volt three
    therefore you do have experience with wet
                                                        13
                                                             phase system. If you want to go to exhibit -- I
13
14
                                                        14
                                                             believe it's B. Exhibit B. That's the breaker
    locations?
15
            MR. THOMA: Correct.
                                                        15
                                                             that tripped. That's a 400 amp breaker. It
16
                                                        16
                                                             flows -- that I believe is the 150 amp breaker and
            MR. WOLFF: And so on your other
    projects do you typically put the seal upstream as
                                                        17
                                                             a motor control center No. 1 that feeds on to a
18
    I'll call it versus downstream from where water
                                                        18
                                                             main breaker for the motor control center that
19
    could flow?
                                                        19
                                                             feeds the influent pumps. That is the breaker
20
                                                        20
                                                             that was tripped on the date of the December 19th
            MR. THOMA: My typical approach would
21 be to have an air gap and actually rise the
                                                        21
                                                             event.
                                                        22
22 conduits above the water level so it doesn't
                                                                     MR. WOLFF: Right. So the main breaker
    actually enter into the wet location, and then
                                                        23 is a 12 combo amp breaker?
                                                        24
    perhaps put a seal on one side or the other to
                                                                     MR. THOMA: This one right here, yes.
25 prevent just incidental moisture from entering.
                                                        25
                                                                     MR. WOLFF: All right. And this is a
                                                Page 42
                                                                                                        Page 44
    That was actually the fix that was provided for
                                                             480 volt system, correct?
                                                         2
    here was to reroute those conduits up over the
                                                                     MR. THOMA: Yes, sir.
 3
    wall and back down so there was an air gap so the
                                                         3
                                                                     MR. WOLFF: Is there a code requirement
                                                         4
 4
    water couldn't make continuous entry into the
                                                             on the 480 system, a thousand amp breaker or
 5
    building.
                                                         5
                                                             larger to have some type of additional protection?
 6
            MR. WOLFF: Thank you. My other
                                                         6
                                                                     MR. THOMA: It's required to have
 7
    question is as part of the evaluation,
                                                         7
                                                             ground vault protective device protection. It
 8
    investigation and corrective actions that you took
                                                             also requires testing to be done on it after it's
                                                         9
9
                                                             installed, correct.
    you performed a protective device coordination
                                                        10
10
    study?
                                                                     MR. WOLFF: All right. And so when you
11
                                                        11
                                                             have the systems with the ground vault protection
            MR. THOMA: Yes, we did.
12
            MR. WOLFF: And is a protective device
                                                        12
                                                             and also additional protection, which I would
13
                                                        13
                                                             assume is like over-current, et cetera, is there
    coordination study required in the National
14
    Electrical Code?
                                                        14
                                                             some type of a coordination that is required to
15
                                                        15
            MR. THOMA: Is it required? For
                                                             prevent tripping?
16
                                                        16
                                                                     MR. THOMA: You would normally do
    certain facilities, yes. I believe healthcare is
    required. I'm not certain whether wastewater
                                                        17
                                                             everything you could to prevent -- to provide
    treatment plants is one. I can't answer that
                                                        18 selective coordination, correct, so that the
19
    question, but it's not required by code.
                                                             downstream breakers would trip before the main,
                                                        19
20
            MR. WOLFF: So the National Electrical
                                                        20
                                                             correct. And that study -- we don't know whether
21 Code does not require protected device
                                                        21
                                                             that study was done, quite possibly it was. Do
                                                        22
                                                             know, but the designer and the installer of this
    coordination study in the electrical systems that
                                                        23
23
    you have applications which are nonresidential, is
                                                             facility may have done that.
24
                                                        24
    this the case here?
                                                                     MR. WOLFF: You performed this study
25
            MR. THOMA: It's not required for all
                                                        eventually, didn't you, as part of the corrective
                                                Page 43
```

```
action?
                                                             such as Flectro-Tech or Faton Cutler-Hammer to do
2
                                                          2
           MR. THOMA: We looked at the operators
                                                             those tests.
                                                          3
    because of the fact that the 400 amp breaker
                                                                     MR. WOLFF: And then those companies
    tripped ahead of one of the downstream breakers.
                                                          4
                                                             would perform the electrical preventive
 5
    We did look at is there something that could be
                                                          5
                                                             maintenance testing and they would be using the
                                                          6
 6
   done to better coordinate the breakers downstream
                                                             applicable standards?
                                                          7
7
    with the upstream breaker. And that was the
                                                                     MR. THOMA: Yes. Yes, I believe so.
    impetus for doing the coordination study.
                                                          8
                                                                     MR. WOLFF: There was problems with the
9
           We did identify that because of the
                                                         9
                                                             controls also based on some of the documents that
10
    molded case circuit breakers, and I know, sir,
                                                         10
                                                             I read. Did you have a chance to review or
11 that you're familiar with this equipment. The
                                                         11
                                                             troubleshoot some of these control problems that
12 molded case circuit breakers in this range in our
                                                             were discovered during, you know, the event?
13 instantaneous region are very much overlapping in
                                                         13
                                                                     MR. THOMA: Could you clarify which
14 a lot of vault conditions. So the higher vault
                                                         14
                                                             control issues? I'm not understanding what --
15 conditions pretty much any one of those four
                                                         15
                                                                     MR. WOLFF: That's the part where I'm
16 breakers could have tripped.
                                                         16
                                                             confused myself because it was referenced to
17
           So it's impossible to completely
                                                             controls problem in the MCC and I wasn't too sure
                                                         17
18 selectively coordinate all four breakers so that
                                                         18
                                                             if they were talking about the -- you know, if it
19 the downstream breaker trips ahead of the upstream
                                                         19
                                                             was VFD, verifiable frequency drive problems or
20 breaker. So it wasn't -- the impetus for doing
                                                         20
                                                             other problems.
                                                         21
21 the sturdy was to see if we couldn't improve upon
                                                                     MR. THOMA: Like I say, I did not look
22 any coordination settings to more properly or more
                                                         22
                                                             at any control issues or incidents, and I don't
23 effectively operate that system. And it turns out
                                                         23
                                                             believe they were in any way a factor in the
24 that there's very little that could be done based
                                                         24
                                                             failure of that system.
                                                         25
25 on the type of equipment that's there.
                                                                     MR. WOLFF: When you were hired to
                                                Page 46
                                                                                                         Page 48
 1
                                                             perform the study and you made in fact
            MR. WOLFF: And when you did this
 2
                                                          2
    coordination study to verify the setting of the
                                                             recommendation for addition of an arc flash study,
 3
    breaker, as you pointed out, you didn't have, you
                                                          3
                                                             was that performed?
                                                          4
 4
                                                                     MR. THOMA: Arc flash study has yet to
    know, different settings that could inadvertently
                                                          5
    overlap, did this include the testing of the
                                                             be performed. It was an option on our proposal,
 6
    breakers beyond just performing the theoretical
                                                          6
                                                             has not been performed by our firm.
7
                                                          7
    calculation?
                                                                     MR. WOLFF: When you reviewed the
 8
                                                          8
                                                             single line in the documents, have you had a
            MR. THOMA: There was no testing done,
                                                          9
 9
    no, sir. There has been no testing done. I'm not
                                                             chance to review the electrical preventative
                                                         10
10
    saying that there wasn't going to be or the
                                                             maintenance manual from this facility?
                                                         11
11
    district wasn't prepared to did that, but that
                                                                     MR. THOMA: No, I have not.
                                                         12
12
    hasn't been done as of yet.
                                                                     MR. WOLFF: Were you asked to provide
13
            MR. WOLFF: Is it an industry standard
                                                         13
                                                             that service?
14 practice or are there any ANSI standards that
                                                         14
                                                                     MR. THOMA: No, I was not.
15
                                                         15
    recommends preventative maintenance testing?
                                                                     MR. WOLFF: And so when you looked at
16
            MR. THOMA: Yes, there are. I can't
                                                         16
                                                             the electrical equipment was there any type of
17
    cite them for you, sir, but yes.
                                                         17
                                                             labels or indication of, you know, tested by and
18
            MR. WOLFF: And those standards would
                                                         18
                                                             dates?
19
                                                         19
    fall under NFEA standards, just like National
                                                                     MR. THOMA: I believe there are test
                                                         20
20
    Electric Code?
                                                             stickers on the main service equipment near and at
21
                                                         21
                                                             the 1200 amp main on the main service equipment,
            MR. THOMA: I can't verify that, sir.
22
                                                         22
            MR. WOLFF: You performed preventive
                                                             MSE.
                                                         23
23
    maintenance on facilities?
                                                                     MR. WOLFF: You don't recall the date
24
            MR. THOMA: We do perform preventive
                                                         24
                                                             of the test?
                                                         25
    maintenance. We normally hire an outside firm
                                                                     MR. THOMA: I do not recall the date of
```

Page 47

```
breaker that tripped is downstream of the transfer
    the test, I'm sorry.
                                                          2
                                                             switch, so when it tripped the generator could run
            MR. WOLFF: Okay. The standby
 3
                                                          3
    generator, have you -- part of your services, did
                                                             all day long, it's not going to back up those
 4
    they include also a review of the emergency
                                                          4
                                                             pumps.
 5
                                                          5
                                                                     MR. WOLFF: Yeah, because wasn't there
    generator system?
                                                          6
                                                             a problem with the pumps that they were not
 6
            MR. THOMA: Not in particular. It is a
 7
                                                          7
                                                             running at full rpm, instead of running at 1800
    part of and it's shown on a single line diagram,
    but I was not asked to review it. It was looked
                                                          8
                                                             rpm one of the emergency pumps, to be specific,
                                                          9
                                                             was only running at 1500 rpm?
 9
    at as part of the coordination study when the
10
    single line diagram was furnished to Eaton
                                                         10
                                                                     MR. THOMA: I have no knowledge of
11
    Culter-Hammer for the coordination study.
                                                         11
                                                             that. Are you talking about an electric pump?
12
            MR. WOLFF: That emergency standby
                                                         12
                                                                     MS. MACEDO: I don't want to interrupt,
13
                                                         13 but I believe Chairperson Wolff is talking about
    generator has a transit switch?
14
                                                             the emergency backup diesel pump and sort of the
            MR. THOMA: Yes, it does -- I'm sorry.
                                                         14
15
    The generator is the generator, the transfer
                                                         15
                                                             intermittent problems it had on the day of the
                                                             spill, and vou're referring to the generator. So
16
    switch is the transfer switch and it's located at
                                                         16
                                                             I don't want you to be talking about two different
17
    the main switch gear. It's in the lineup of the
                                                         17
18
    switchboard. So it's the PG&E underground pole
                                                         18
                                                             things and maybe both be right and sort of be
19
    section, a meter, a CT section, the main circuit
                                                         19
                                                             miscommunicating with each other. So I apologize.
                                                         20
                                                                     MR. THOMA: That's what I was
20 breakers, a transfer switch and distribution.
21
            MR. WOLFF: Okay. So part of that --
                                                         21
                                                             wondering, maybe that was the diesel pump that was
22 you know, critical part of the system, did you
                                                         22
                                                             running at lower rpm's, not the pumps -- the
    have also any review or input on the maintenance
                                                         23
                                                             influent pumps were off at the time so they
                                                         24
24 that was performed and the condition of this
                                                             weren't running.
                                                         25
25 critical piece of equipment?
                                                                     MR. WOLFF: Okay. All right. Well,
                                                Page 50
                                                                                                          Page 52
 1
            MR. THOMA: No, I was not, and as I
                                                          1
                                                              thank you for answering my questions.
 2
    understand it, it operated as it was supposed to
                                                          2
                                                                      MR. YOUNG: One last question for you.
 3
    have on the date of the event.
                                                          3
                                                              This junction box that had the wires in it, is it
 4
            MR. WOLFF: Well, wasn't there problems
                                                              your testimony that that box was properly designed
 5
                                                          5
    with the emergency generator? In some of the
                                                              and built and maintained to allow water to get
 6
    documents that I read there were problems with the
                                                          6
                                                              into it from ponding and that that would be okay,
7
                                                          7
    generator being able to perform correctly, and
                                                              that would not be an issue except for the lack of
 8
                                                          8
    please, you know, correct me if I'm mistaken
                                                              seals?
                                                          9
 9
    because there was guite a bit of material to read
                                                                      MR. THOMA: I would say -- I wouldn't
10
    and --
                                                         10
                                                              say that exactly, no. I wouldn't design a box to
11
                                                              be ponded on top of. We would never intentionally
                                                         11
            MR. THOMA: It was my understanding
12
    that the generator -- there was an alarm at the
                                                         12
                                                              design a box to be at the lowest level. My
13
    generator location as there was water ponding in
                                                         13
                                                              understanding is that in the year prior or maybe
14
    that area. And again, I don't know the details of
                                                         14
                                                              two years prior that that had been identified and
15
                                                              that the box lid had actually been raised about
    the water or what the alarm was. That was -- my
                                                         15
    understanding that was the first place that the
                                                         16
                                                              two or three inches so it wasn't -- it was out of
17
    operators responded to as an alarm came in, that
                                                         17
                                                              the ponding area, but the date of the event there
    there was an tissue there. When they got there
                                                              was water flowing -- surface water flowing 6 to 12
19 they started the generator and it operated
                                                         19
                                                              inches above the box. So even that that
                                                         20
20 correctly, then they moved into the electrical
                                                              maintenance lid raising didn't adequately prevent
    equipment room where the next alarm was giving
                                                         21
                                                              water from getting into the box.
                                                         22
                                                                      Incidental water from rain and
    them some kind of an alarm. I do not recall what
23
    the alarm was that caused them to go in there, but
                                                         23
                                                              condensation and fog that was expected to be in
                                                         24
24
    the transfer switch in the main electrical
                                                              the box outside. And that's why they're not
25 building which is a different building. The
                                                         25
                                                              sealed, you're just going to have -- so you do

22

MR. YOUNG: Okay. So if then you knew you had a box that was subject to flooding at times or inundation from water beyond incidental moisture from either air or soil, would you take other precautions? What would be the standard of 11 care in a situation like that?

MR. THOMA: Well, the standard of care 13 was that you probably would not want it to become 14 a drain, correct. And I believe prior to the event the district had taken those precautions, 16 and I'm not sure of the date of that, but they had 17 identified that problem and the box lid had been 18 raised. I can't tell you exactly how many inches 19 above the ponded area, but that area had depressed 20 slightly. You'd have to talk to the civil 21 engineering experts about that, but my 22 understanding is they identified that, and the box 23 that was raised so that water wouldn't just run 24 into that box, and that was, I believe, prior to

wiring, some of it was probably the old RH wire, cloth cover, older wire, which is now bordering on 50 years old. I can't say nor could any of the district folks tell us for sure that that was the subject of all of the issues that they had with wiring, but the wiring that was installed in 1986 was all THW or XHHW, which were all wet locations properly rated.

And I believe that the district over, you know, the course of time, I think it's 11 Exhibit 51 kind of shows over time where they had been replacing portions of the wire as projects came along. You'll see this table kind of talks 13 14 about -- and it's difficult to see, but I believe 15 they show the wire sizes -- I mean, the wire types and the dates that things were replaced.

17 This was when the wire was installed, 18 what the insulation types were. And the ones 19 that -- I think the GHHN, which is not a wet 20 location rated wire, you can see that they were 21 replacing many of those conductors, you know, 22 in -- back as early as 2006, 2009, and some of it 23 was since the event has occurred.

I'll also point out too you can't shut 25 the entire plant down and replace all of the wire,

Page 54

Page 56

```
1
          MR. YOUNG: Do you know when?
2
          MR. THOMA: I understood it was a
3
   couple of years prior to December 19th of 2011.
4
          MR. YOUNG: Where did you get that
5
   information from?
6
          MR. THOMA: In interviewing the Wallace
7
8
```

engineers as well as some testimony that I heard from -- I believe it was Mr. Appleton that that box had been raised.

MR. YOUNG: Okay. All right. 11 Dr. Wolff.

MR. WOLFF: I have one more question. 13 In testimony that were made, and I believe it was 14 Mr. Appleton, he referred to the degradation of 15 the wiring having caused a short at times, and earlier in some of the questions made there was a discussion about the replacement of the wiring. 18 And so in your investigation did you have an opportunity to review some of the history of the 20 wiring problems and perhaps the troubleshooting 21 loa?

MR. THOMA: I did not review the 23 troubleshooting logs. I have a bit of an understanding, the plant was, as I understand it, built in 1966 or thereabouts, so the original

Page 55

so the district's process was to try to do it 2 incrementally as projects came along as well as to 3 do it when off-peak times of the year when the 4 systems could be down if we didn't have redundant 5 systems to take care of a pump, that if we had to 6 take a critical pump out of service we couldn't do 7 that during peak time or you had to do that during 8 scheduled maintenance. So the fact that you 9 couldn't just do it all at one time this was, you 10 know, a process that they were going through and 11 demonstrates that they were making progress on 12 that older wire.

MR. WOLFF: On the budget which was around I think 2009, 2010 there was a budget to upgrade the electrical system, and I believe part of the upgrade was also the electrical wiring so was there still some wiring that required upgrades?

MR. THOMA: I would -- as of what period of time, sir?

21 MR. WOLFF: Around 2009.

22 MR. THOMA: I think according to this 23 there were probably still some occasions where the 24 older wiring still existed, correct.

MR. WOLFF: All right. Thank you.

		1	
1	MR. YOUNG: Okay.	1	Q. Okay. So most of the rewiring was for
2	MS. THORME: Can I do a couple of	2	the 1960 to 1986 construction?
3	redirect?	3	A. I can't speak to what the intent was,
4	MR. YOUNG: Sure. Go ahead.	4	but that would be my intent if I was doing that
5		5	because the other wire was only 17 years old and
6	REDIRECT EXAMINATION	6	it was all properly rated.
7	BY MS. THORME:	7	Q. Okay. And then you had talked about
8	Q. Mr. Thoma, so that Exhibit A that you	8	how these boxes are designed that they can have
9	had up there, those were the design schematics	9	water in them and that they drain; is that
10	from 1986; is that correct?	10	correct?
11	A. That's correct.	11	A. Normally it would drain through a hole
12	Q. Okay. So you testified that they	12	in the bottom or if there's a physical drain that
13	designed this to include seals, was that what I	13	goes between boxes and maybe a sump pump. I can't
14	heard?	14	speak to that specifically. I do know that there
15	A. That's what the construction documents	15	was in the original construction documents
16	show, correct.	16	identified a conduit between boxes and it was
17	Q. Okay. So the thought would have been	17	No. 999 on the conduit schedule. There was a two
18	that when they constructed that plant in 1986 that	18	and a half inch conduit that was near the bottom
19	somebody would have actually installed those	19	of the box to allow for the water to drain out.
20	seals, right?	20	Q. And then I think that you had mentioned
21	A. Correct, and would have been	21	things that had happened since the spill, that the
22	inspected.	22	conduits have now been rerouted over the walls?
23	Q. So then someone besides the district,	23	A. Correct.
24	the county or some other entity is supposed to	24	Q. And has the shunt trip switch that was
25	come and inspect?	25	the problem now been separated so that it only
	Page 58		Page 60
1	A. Normally there will be either a county	1	controls two pumps at a time instead of all
2	inspector or a deputy inspector.	2	four?
3	Q. Okay. Would it be easy to tell right	3	A. I do not know that that work has been
4	away that these weren't there?	4	completed. I understood that that work might be
5	A. I would say so.	5	taking place so that they would isolate those
6	Q. I mean, just looking at	6	shunt trip switches so to minimize the exposure.
7	A. Yes.	7	I don't know that the work has actually taken
8	Q. You could walk by and look and see that	8	place personally. It was anticipated to be done,
9	they weren't there? I mean, you would notice that	9	it was a suggestion that we made.
10	on a normal day?	10	Q. And then I think that you had talked
11	A. You mean after the construction's	11	about the boxes being raised?
12	complete.	12	
13	Q. Yes, after it's complete.	13	
14	A. Not necessarily.	14	•
15	Q. Okay. And as far as you're aware were	15	
16	there any problems with the fact that there were	16	lid of the box, this is where an extension ring
17	no seals since 1986 until this event occurred?	17	was placed on the top of the box to raise it,
18	A. It's my understanding that there were	18	looks like about four inches. And then a concrete
19	no problems prior to this event.	19	
20	Q. And were the construction design from	20	the lid goes inside of that box. So it was raised
21	1996, was all that wire supposed to be the	21	to prevent ponding water getting in there that
22	waterproof wire for the newer construction?	22	would just run right in. Incidental water could
23	A. From 1986?	23	get in, but during the event of the 19th the water
24	Q. Yes.	24	was 12 inches above that at the surrounding
25	A. Yes.	25	territory. There's a four inch box extension
	Page 59		Page 61
	E	1	E

1	didn't provide the	1	about the economic benefit and how it was derived,
2	MS. JAHR: Correction.	2	but I'm going to proceed directly to ability to
3	MS. THORME: That's Exhibit 71.	3	pay if you don't mind.
4	MS. JAHR: I wanted to show you the	4	A. That's fine.
5	front page. I wanted to show the picture first.	5	Q. Have you ordinarily conducted an
6	This is Exhibit 71 and the date on that is	6	ability to pay analysis?
7	MS. THORME: 2007. I think Mr. Young	7	A. Yes. In every case we usually require
8	had asked a time frame. So thank you very much,	8	a method analysis benefit of noncompliance and
9	Mr. Thoma.	9	also an ability to pay analysis.
10	MR. YOUNG: Any re-cross?	10	The ability to pay analysis is usually
11	MS. MACEDO: No.	11	done by first requesting the comprehensive annual
12	MR. YOUNG: Okay. Thank you very much,	12	financial report from the district that gives us a
13	Mr. Thoma. All right. Now we will go back to the	13	set of financials, according to a prescription
14	prosecution team's case in chief.	14	that has been agreed to by the accountants that do
15		15	this type of work. That has been was requested
16	DIRECT EXAMINATION	16	and we did not receive the comprehensive annual
17	(Gerald Horner)	17	financial report from the district, so therefore
18	BY MS. MACEDO:	18	we did not conduct a formal ability to pay on the
19	Q. Sure. We're going to go slightly out	19	initial June 27th submission in chief.
20	of order and call Mr. Horner. We had a ruling	20	Q. Okay. But we did at the time that the
21	yesterday that Mr. Horner was allowed to testify	21	district submitted its materials receive audited
22	to make sure some exhibits got into the record.	22	financial statements; isn't that correct?
23	So he drove from Sacramento yesterday, which we	23	A. Yes, we did.
24	appreciate. Good morning, Mr. Horner.	24	Q. So we were able to do an ability to pay
25	A. Good morning. My name is Gerald	25	analysis at that time?
	Page 62		Page 64
1	Horner. I'm the chief economist for the State	1	A. Yes, we did.
2	Water Resources Control Board. My address is	2	Q. What did it reveal?
3	1319 H Street, Sacramento, California 95814.	3	 A. The ability to pay of the district is
4	Q. And how long have you worked with the	4	adequate to cover the proposed ACL without any
5	Water Board?	5	kind of impact on the ratepayers.
6	A. I've worked with the Water Board for	6	Q. And how did you come to that
7	over 11 years.	7	conclusion?
8	Q. What is your title with the Water	8	A. The conclusion was derived from the
9	Board?	9	financial reports that were submitted for fiscal
10	A. I am the senior economist for the Water	10	years ending in June 30th, 2010, fiscal years
11	Board.	1	ending June 30th, 2009, and the fiscal report for
12	Q. And I know you helped me and the rest	12	the fiscal year June 30th, 2008.
13	of the prosecution team in a number of ways, and	13	In those reports there is a substantial
14	we're going to cover a couple of topics. Let's	14	amount of unencumbered cash and cash equivalents
15	start with the foundation of a number of exhibits.	15	held by the district that is free to be used with
16	You assisted the prosecution team with	16	contingency expenses for the district.
17	Exhibits 18, 109 and 113. Those are exhibits that	17	Q. When you say "substantial amount," what
18	concern the economic benefits that we believe was	18	amount are we talking about?
19	received by the district in this matter. Do you	19	A. For the years 19 fiscal year ending
20	recall those exhibits?	20	2010 it is \$5,125,000. For the year ending in
21	A. Yes, I do.	21	2009 it's \$5.8 million, and for the fiscal years
22	Q. Okay. And are they true and correct	22	ending of 2008 it was \$6.9 million. This is
23	copies of what they purport to be?	23	substantially more than what is typically retained
24	A. Yes, they are.	24	in this type of an account.
25	Q. Okay. Ms. Thorme may have questions	25	Q. Okay. So I want to make sure, I'm not

SEPTEMBER 7, 2012

an economist, I want to make sure I understand you 2 correctly. 3 The most recent financial documents 4 submitted to us that ends with fiscal year 2010 indicates a \$5 million surplus? 6

- A. Surplus.
- Q. Okay.

7

8

21

- A. Yes.
- 9 Q. So that is not indicating that there is bills to be paid, that's not reflected on a budget an outstanding income and assets, that's a 12 \$5 million surplus?
- 13 A. That is correct.
- 14 Okay. Is that money unencumbered?
- 15 A. That is correct.
- 16 Q. Is that money liquid?
- 17 A. It is. Some of it is held, but it's 18 not -- in a perusal of the account, it is not held nothing more than 90 days, so it's liquid in 20 90 days.
- Q. Okay. Now, in one of the documents we 22 talked a little bit about wastewater treatment 23 rates and, you know, so it's your conclusion that 24 based on this \$5 million surplus that the district 25 can pay the full penalty recommended by the

Q. Okay. And what input did you use for this document?

A. When we started this I normally go through with the technical people that are assigned to this project, if there is any indication of any kind of either practice or any kind of a program that should have been purchased that could have prevented the spill and also whether it was out of compliance.

We found -- I found in the fiscal year budget of 2004, 2005 a proposal for an electrical system upgrade. And my decision was to use or to indicate that this upgrade would have significant effect on prevention of the spill. And let me --I base this on the following description that was prepared by the district.

The original electrical system was 18 installed in 1964 and 1966 as part of the construction of the plant. Additional electrical 20 equipment and wiring was installed in 1986. The wiring that connects the various motors with the 22 motor control center located in the power generation plant has deteriorated over the years due to being submerged by groundwater. The existing wiring is not designed for this type of

Page 66

Page 68

1 prosecution team without passing it on to the 2 ratepayers, but based on the wastewater treatment rate what was your analysis of the rates, are they 4 fair based on a consideration of other wastewater 5 rates around the area?

A. The rates that are currently being paid by the district is about \$16 a month for a residence. \$16 a month is a lot less than what the average rates that are paid in the State of California. The average rates are about \$26 a month.

MS. MACEDO: All right. Subject to 13 redirect I don't have any further questions of 14 this witness.

MR. YOUNG: Go ahead.

CROSS-EXAMINATION

18 BY MS. THORME:

Q. Exhibit 18, please. So Mr. Horner, this is Exhibit 18 which was the Ben results that were provided to us in the prosecution team's evidence. Have you seen this document before?

- A. I have.
- 24 Q. Did you prepare this document?
- 25 A. I did.

service, and as a result there has been several 2 instances where the wiring has failed and either 3 caused an electrical fire or loss of power.

This project will replace all of the wiring to the various motors and lighting in the plant with waterproof wiring that is rated for this type of service. In order to keep the plant operating during this process the wiring will be replaced in a sequenced fashion with one set of wires replaced at a time. In addition, as-built drawings will be created.

And it was my judgment at that time had 13 that project been undertaken in 2004 or after 2005 it would have had a significant effect not only in upgrading the electrical system but to uncover other problems that were in existence in this vault.

Q. So Dr. Horner, were you given the district's evidence when we submitted it to review?

- A. Yes.
- Q. Did you review Mr. Thoma's declaration?
 - No, I did not. Α.
 - Did you hear Mr. Thoma's testimony

Page 69

Page 67

18 (Pages 66 to 69)

1	1.1.2	1	
1	today?	1	noncompliance.
2	A. I did.	2	Q. Okay. Where did the \$5,000 estimate
3	Q. Does that change your mind at all as	3	come for the one-time nondepreciable expenditure
4	to	4	come from?
5	A. No.	5	A. Well, that will be discussed later, but
6	Q whether that wire can I finish	6	it was for some minor very, very minor expenses
7	question, please?	7	that were not done at the time of the spill.
8	A. No.	8	Q. You don't know what those things
9	Q. Can I finish the question, then you	9	were?
10	answer it.	10	A. Well, I can't really remember right now
11	So does that not change your mind that	11	what they were.
12	this initial 2004 budget item would not have made	12	Q. Okay. What is the basis for your
13	a difference?	13	allegation that the costs were tax deductible?
14	A. No.	14	A. No, the tax status is a municipality.
15	Q. Were you aware of the rewiring projects	15	If you can right down there on the fifth line
16	in Exhibit 51 that we had up on the board?	16	there it says, "Tax rates in municipality which
17	A. Yes, I am.	17	pays no taxes." So it's not depreciable.
18	Q. And that doesn't change your mind	18	Q. Where did you come up with the discount
19	either?	19	rate?
20	A. This was done in June I did this	20	A. The discount rate in the Ben model is
21	performed this in June.	21	determined by the type of entity that you are, and
22	Q. I understand.	22	from municipalities the average bond rate is used
23	A. Okay. All right. Prior to the	23	as the discount rate.
24	submission of that evidence.	24	Q. What is that percentage?
25	Q. I understand.	25	A. For this particular case it is
	Page 70		Page 72
1	A. Okay.	1	4.5 percent.
2	Q. But if your mind has been changed and	2	Q. Okay. And do you know what the prime
3	the Ben model needs to be rerun, that's what the	3	rate interest rate is right now?
4	question I'm asking you, has there been any change	4	A. Prime interest for commercial lending?
5	in your thought process that would modify the Ben	5	Q. Yes.
6	model?	6	A. Is about 7 and a half percent,
7	A. Yes, there is.	7	9 percent.
8	Q. Okay.	8	Q. Okay. All right. And where did you
9	A. If I had to do it over again, I	9	come up with the useful life estimate of
10	certainly would look at a number of factors that	10	15 years?
11	led or possibly led to this occurrence. I think	11	A. 15 years is pretty typical on this type
12	the pump discharge valve I think needed to be	12	of an installation.
13	could be a cause. The emergency pump, the leaky	13	Q. What is the rate for SRF loan funding,
		14	state revolving fund loans?
14		1 7 7	
	influent gate, headworks had problems and then,	1	A. Right now it's about 2.5.
14		15	A. Right now it's about 2.5.O. And how did you select the probable
14 15	influent gate, headworks had problems and then, again, there was probably other electrical issues that will be discussed or were discussed this	15 16	Q. And how did you select the probable
14 15 16	influent gate, headworks had problems and then, again, there was probably other electrical issues	15	Q. And how did you select the probable payment date of 9/1/12?
14 15 16 17	influent gate, headworks had problems and then, again, there was probably other electrical issues that will be discussed or were discussed this morning.	15 16 17	Q. And how did you select the probable payment date of 9/1/12?A. That was in June, and counsel said that
14 15 16 17 18	influent gate, headworks had problems and then, again, there was probably other electrical issues that will be discussed or were discussed this morning. I would do a more detailed	15 16 17 18	Q. And how did you select the probable payment date of 9/1/12? A. That was in June, and counsel said that that was a probable date of settlement.
14 15 16 17 18	influent gate, headworks had problems and then, again, there was probably other electrical issues that will be discussed or were discussed this morning. I would do a more detailed investigation on those issues and determine what	15 16 17 18 19	 Q. And how did you select the probable payment date of 9/1/12? A. That was in June, and counsel said that that was a probable date of settlement. Q. Okay. All right. Can we pull up
14 15 16 17 18 19	influent gate, headworks had problems and then, again, there was probably other electrical issues that will be discussed or were discussed this morning. I would do a more detailed investigation on those issues and determine what the compliant costs were at the time that that	15 16 17 18 19 20	Q. And how did you select the probable payment date of 9/1/12? A. That was in June, and counsel said that that was a probable date of settlement. Q. Okay. All right. Can we pull up Exhibit 39, the last page, please. So this is the
14 15 16 17 18 19 20 21	influent gate, headworks had problems and then, again, there was probably other electrical issues that will be discussed or were discussed this morning. I would do a more detailed investigation on those issues and determine what the compliant costs were at the time that that should have been done to determine the spill.	15 16 17 18 19 20 21	Q. And how did you select the probable payment date of 9/1/12? A. That was in June, and counsel said that that was a probable date of settlement. Q. Okay. All right. Can we pull up Exhibit 39, the last page, please. So this is the shunt trip receipt for payment. So to make the
14 15 16 17 18 19 20 21 22	influent gate, headworks had problems and then, again, there was probably other electrical issues that will be discussed or were discussed this morning. I would do a more detailed investigation on those issues and determine what the compliant costs were at the time that that should have been done to determine the spill. Q. So my understanding you would make the	15 16 17 18 19 20 21 22	Q. And how did you select the probable payment date of 9/1/12? A. That was in June, and counsel said that that was a probable date of settlement. Q. Okay. All right. Can we pull up Exhibit 39, the last page, please. So this is the shunt trip receipt for payment. So to make the change to install the seal in the middle of the
14 15 16 17 18 19 20 21 22 23	influent gate, headworks had problems and then, again, there was probably other electrical issues that will be discussed or were discussed this morning. I would do a more detailed investigation on those issues and determine what the compliant costs were at the time that that should have been done to determine the spill. Q. So my understanding you would make the number bigger and not smaller?	15 16 17 18 19 20 21 22 23	Q. And how did you select the probable payment date of 9/1/12? A. That was in June, and counsel said that that was a probable date of settlement. Q. Okay. All right. Can we pull up Exhibit 39, the last page, please. So this is the shunt trip receipt for payment. So to make the

	TRANSCRIPT OF HEARING		SEPTEMBER 7, 2012
1 2 3 4 5 6 7 8 9 10 11 12 13 14	Was that in your analysis? A. No. Q. Okay. And can we go to Exhibit 98, please, which is the declaration of Aaron Yonker, it's Exhibit B on the financial information. Okay. So these funds here that are in the middle, were these the numbers that you used for determining there was a \$5 million surplus? A. I don't recognize that at all. Q. So what numbers were you looking at to determine there was a \$5 million surplus? A. Okay. This report is entitled the independent auditor's report and financial statements for the years ending or for the year	2 3 4 5 6 7 8 9 10 11 12 13 14	that were prepared after that date we did not see them. If that is a 2012 document it is immaterial, because, one, I would probably guess that is probably a budget; is that correct? Q. I am not testifying today. A. Well, can I see the title page for that? Q. This is attached to Mr. Yonker's declaration. This was evidence that was provided with the district's our case in chief, essentially. So you weren't given this to review? A. I have seen this. Okay. And this is not germane to ability to pay.
15 16 17 18 19 20 21 22 23 24 25	ending June 30th, 2010 for the South San Luis Obispo County Sanitation District. Q. Do you know whether that was evidence in this case as part of an exhibit? A. It was submitted I think by the discharger. Q. That wasn't my question. My question is did the board members have that evidence? A. I don't know. Q. I don't believe that they do. A. Oh, okay. Page 74	15 16 17 18 19 20 21 22 23	 Q. So cash on hand and ability to get the money is not relevant to whether someone can pay? A. Well, your cash on hand comes from your financial statements, from your balance sheet. That is not a balance sheet. Q. But doesn't it directly reflect to how much money you have in the bank? A. That does not show a complete picture. Q. Okay. So at the bottom, the table that Page 76
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	Q. So was there any evidence in the exhibits that were presented to the regional board that would show what you're claiming to be a \$5 million surplus? A. If you say no, no, there isn't. Q. So if you look at this information, which was presented in evidence to the board members, this is the as of July 1st, 2012 these are the balances. So there's operating fund balance, which is negative, an expansion fund which are sewer connection fees that cannot be touched under the government code, replacement fund to total \$3.7 million, where do you find a \$5 million surplus in there? A. The ability to pay analysis is based on	2 3 4 5 6 7 8 9 10 11 12 13 14 15	runs over into two pages, she can put both of them up so we can see both, so this is as of the revenues and expenditures for the coming year, which would be this fiscal year that we would actually the district would have to pay the penalty, so revenues minus expenditures. And then we see on there if this liability, which has now been raised, had to be paid it would leave a negative amount for the district to run the treatment plant. How does that not reflect ability to pay? A. Because your expenditures listed as fiscal year 2010-13 expenditures probably include there's no detail on this number, but I am guessing that that has a substantial amount of depreciation. Depreciation is a non-cash cost.

16 a US EPA model, it's a computer model for determining the financial status of a district. 18 And it uses the standard financial statements 19 called the balance sheet, the income report and a 20 cash flow statement. The basis -- the first basis 21 for ability to pay is cash and cash flows which 22 comes from the financial report. Now, the last report that was submitted

24 by the district was the fiscal year ending

25 June 30th, 2010. If there were adequate reports

24 A. And I'm saying that that number -- I

19 they're not done then we'll back in another

A. Okay. You asked me about that

25 have looked at your audited financial statements

Q. But what about major budget items that 18 have been scheduled that need to be done and if

Page 77

17

20

21

23

hearing?

Q. Right.

22 **number.**

1 (800) 288-3376

		1	
1	and your revenues exceed your expenditures in	1	BY MS. THORME:
2	every given year. You do not have an income	2	Q. And so are any of the funds that you
3	problem in the district.	3	are looking at in fund balance 19 actually, can
4	Q. But the last ones that you looked at	4	you go back to the earlier table? So which fund
5	you're relying on 2010 and we're two years later	5	balance were you looking at that had additional
6	than that now.	6	cash in it?
7		7	
	A. That's right.	8	A. Okay. This document is not the
8	Q. Because the audited forms for 2011	1	document that is used to determine ability to pay.
9	aren't due yet or haven't been done yet.	9	The ability to pay is determined by the financial
10	A. For 2011	10	statements of the district which you have said are
11	Q. Or you don't have them.	11	not completed yet for 2011, and they're also not
12	MS. MACEDO: They were provided.	12	completed for 2012.
13	THE WITNESS: The last I saw was	13	Q. Right. Well, the fiscal year just
14	2010.	14	ended fairly recently for 2012.
15	BY MS. THORME:	15	A. That's right.
16	Q. Okay. Where is your evidence that	16	Q. But my question goes to which fund
17	there is depreciation contained in those	17	balance the district has dedicated funds that
18	balances?	18	are for certain things and certain of those funds
19	A. Well, I can show you for these?	19	cannot be touched under law.
20	Q. Yes.	20	 I did not look at any of those.
21	A. Yes, I can if you want to see it.	21	Q. Okay. So if
22	Q. Well, if it's a document that's not in	22	A. I did not consider them.
23	evidence we have to put it into evidence. This is	23	Q. So if that money, the \$5 million that
24	two years old.	24	you were looking at was in a restricted fund that
25	MS. MACEDO: That's the latest you	25	couldn't be used for this purpose how does that
	Page 78		Page 80
	<u> </u>		<u> </u>
1	provided; so	1	affect your ability to pay analysis?
2	MR. YOUNG: If he's referring to this	2	A. Okay. For the fiscal year ending
3	document, is this in evidence?	3	June 30th, 2010, the current assets, cash and cash
4	MS. MACEDO: It's not.	4	equivalence \$5,190,955, that's where I got that.
5	MR. YOUNG: Why don't we mark it.	5	Q. Okay. But what I'm saying is you have
6	MS. THORME: Yeah, we should mark it.	6	to look at each of those funds to see where the
7	MR. YOUNG: Do you have a problem?	7	money is because under the government code certain
8	MS. MACEDO: I don't have any objection	8	funds that come from sewer connection fees have to
9	to it being marked as evidence as long as the	9	be deposited in a separate fund and can only be
10	district doesn't.	10	used for the purposes that those charges were
11	MR. YOUNG: Is this a district	11	
12	document?	12	cannot be used to pay a penalty which is not the
13	MS. THORME: I believe so, yes.	13	purpose that they were collected for. So my point
14	MS. MACEDO: It is.	14	is if you're looking at money that's in a
15	MR. YOUNG: Okay. So let's mark it.	15	restricted fund it cannot be used for ability to
16	MS. MACEDO: Okay. It will be	16	pay. And you didn't you didn't consider that
17	Exhibit 114.	17	when you're looking at the \$5 million surplus.
18	MS. THORME: Yes.	18	A. I did.
19	MS. MACEDO: It's the whole 2010 fiscal	19	Q. How did you?
20	audited response?	20	A. Those funds are not included in the
21	MR. HORNER: It is the independent	21	cash and cash equivalence. Those funds are
22	auditor's report and financial statement for the	22	separate. Those funds are kept clear by law.
23	South San Luis Obispo County Sanitation District	23	There is a clear statement about proprietary funds
24	for the year ending June 30th, 2010.	24	and those that are restricted by law not to be
25	////	25	touched, but it's very clear when your financial
	Page 79		Page 81

```
of the restrictions on a district that you cannot
    statement that your cash and cash equivalence,
                                                           2
                                                              just raise rates, that you actually have to go out
     accounts receivable, interest receivable and
                                                           3
    prepaid expenses are substantial. None of those
                                                              to a vote under Proposition 218 and Prop 226
    are restricted by any -- any rules or any laws.
                                                           4
                                                              before you can raise rates?
                                                           5
    Those are liquid, those are kept in interest
                                                                  A. Yes, I am.
                                                           6
                                                                  Q. Is it a sure thing that you're going to
 6
    bearing accounts of no more than 90 days.
                                                           7
 7
                                                              be able to raise rates?
        O. Okay. But this --
 8
            MR. YOUNG: Excuse me, can I just ask
                                                           8
                                                                  A. No, it's not. However, with this
                                                           9
                                                               amount of cash sitting on the books, there is no
 9
    him a question because it's --
10
                                                          10
                                                               way you should have to go to raise rates.
            MS. THORME: Yes. Certainly.
                                                          11
11
             MR. YOUNG: Mr. Horner, where then
                                                                  Q. But that was sitting on the books two
                                                          12
                                                              years ago?
12
    would the funds that you're referring to that are
                                                          13
13
                                                                  A. Right.
    designated and separate, where do they appear in
                                                          14
14
    that analysis or on this table?
                                                                      Now, if we can move to your Exhibit 109
15
            MR. HORNER: They are in separate -- in
                                                          15
                                                              which was the document that you submitted with
                                                              your rebuttal. All right. In this document you
16
    separate accounts that are identified in
                                                          16
17
                                                              said that there were illegal competitive
    proprietary accounts, but they're not in the
    financial statements. These are the statements by
                                                          18
                                                              advantages that you were looking at. Can you
19 law that must be accounted for in those
                                                          19
                                                               explain to me how a municipality can have an
                                                          20 illegal competitive advantage?
20 categories. They are not proprietary funds. We
                                                          21
                                                                  A. This response was prepared to the
21 don't look at proprietary funds. So we don't --
                                                          22 objection that was raised concerning the
22 we are aware of them, but I don't -- I have no
23 interest in proprietary funds.
                                                          23
                                                              Ben model. And the fact that the Ben model was
                                                          24
24
            MR. YOUNG: So this is a balance sheet,
                                                              controversial --
25 correct?
                                                          25
                                                                  Q. Okay. But wasn't the Ben model --
                                                 Page 82
                                                                                                            Page 84
                                                           1
1
           MR. HORNER: This is a balance sheet,
                                                                      Excuse me. Can I finish?
                                                           2
2
    yes.
                                                                 Q. Oh, I'm sorry.
3
           MR. YOUNG: So it's not identifying or
                                                           3
                                                                  A. The Ben model is controversial, there's
                                                           4
4
                                                              no question about it. Because it is used
    recognizing all of the district's assets, is that
5
    what you're saying?
                                                           5
                                                               nationally against major corporations. They have
6
           MR. HORNER: Yes.
                                                           6
                                                               prepared a number of arguments to challenge the
7
                                                           7
           MR. YOUNG: It is other assets that are
                                                               way that we discount, the way that we compound our
8
                                                           8
                                                               interest and this illegal competitive advantage,
    not on this balance sheet?
                                                           9
9
           MR. HORNER: Yes. Those proprietary
                                                               which does not pertain to this case.
   funds, yes, that they're nontouchable.
                                                          10
10
                                                                 Q. Right. So municipalities are a little
                                                              bit different than when you're using this model
                                                          11
11
           MR. YOUNG: Okay. Go ahead.
12 BY MS. THORME:
                                                          12
                                                              for a corporation that actually makes money?
                                                          13
13
       Q. Well, I just want to say we're at a
                                                                 A. That's correct.
14 little bit of a disadvantage because this wasn't
                                                          14
                                                                 Q. Okay. You also talked on the second
15 put in as evidence that we were preparing for
                                                          15
                                                               page of your document that there were five
16 today. So I haven't had a chance to look at this
                                                          16
                                                              alternative inflation rates that have been built
                                                          17
17 or know where it came from or anything. So I just
                                                               into the model and that default discount rates can
18 want to get that on the record that we're working
                                                          18
                                                              be overridden by the user. How are we to know
19 at a little bit of a disadvantage. We'll try to
                                                          19
                                                              from the black box whether you're overriding,
                                                          20
20 have district people testify to this later in the
                                                              whether you're using a standard, how is someone to
21 day, but this -- just for the point, this is 2010,
                                                          21
                                                              know just from the output what was the input?
                                                          22
22 we're now two years later and as everyone knows
                                                                  A. First, this is not a black box. The
                                                          23
23 your financial situation can change very quickly.
                                                              Ben model is nothing more than an Excel
                                                          24
                                                               spreadsheet. The Excel spreadsheet is distributed
24 And so if there was a need to go out to raise
25 rates in order to pay this penalty are you aware
                                                              with every download for the Ben model, it's a
                                                 Page 83
                                                                                                            Page 85
```

1	standard, stand-alone calculated. The input for	1	required by California law to prepare a
2	the Ben model is printed out. Now, I think I'm	2	comprehensive annual financial report and you
3	not sure if we had an exhibit or a slide, but I	3	cited sections of the government code. Do you
4	can certainly show it to you.	4	know whether those sections apply to the
5	MS. MACEDO: I can get it.	5	district?
6	MR. HORNER: In here is a description	6	MS. MACEDO: I'll object that it calls
7	of the inflaters that are used for a particular	7	for a legal conclusion.
8	expenditure or capital cost that should have been	8	MS. THORME: You can answer.
9	used for compliance. And I can certainly go	9	MS. MACEDO: You can say I don't
10	through those with you if you'd like. I can	10	know.
11	describe them. It's listed	11	MR. HORNER: I'm confused.
12	MR. YOUNG: Before we do that how	12	MR. YOUNG: Then don't say anything
13	are you doing?	13	until we
14	(Discussion off the record.)	14	MS. THORME: Well, he was putting these
15	MS. MACEDO: He's talking about 18.	15	legal arguments into his document, so he obviously
16	MS. THORME: Okay.	16	had a thought that this applied.
17	MS. MACEDO: If that helps.	17	MR. YOUNG: I think you asked him
18	MS. THORME: Which we had up before.	18	whether certain government code sections apply.
19	MS. MACEDO: Yes. You have it. There	19	MS. THORME: That's what I asked is
20	you go. Is that what you want, Gerry? The first	20	whether those apply to the district.
21	page?	21	MR. YOUNG: I think it's fair to ask
22	MR. HORNER: That one right there. And	22	him the question. Go ahead.
23	that's the standard input sheet that's printed out	23	MR. HORNER: Well, it was my opinion
24	and indicates what all the assumptions that were	24	
25	used in the analysis.	25	comprehensive annual financial report.
	Page 86		Page 88
1	BY MS. THORME:	1	BY MS. THORME:
2	Q. Okay. So also if we can go back to	2	Q. That's different than whether these
3	Exhibit 109 to the second page. At the bottom you	3	code sections apply to the district.
4	were saying that the 2012, 2013 adopted budget	4	A. The code sections are strongly
5	cannot be used to determine fund balance for the	5	suggested. Okay. They're not mandatory.
6	district. What's your basis for that statement?	6	Q. And do you know whether those only
7	A. Budgets have no rule.	7	apply to county governments?
8	Q. But that's how the district functions,	8	A. They apply across the board. Any
9	they work off of a budget and	9	public agency should be using a comprehensive
10	A. It's a planning document.	10	annual financial report format.
11	Q. But it's also based on reality of what	11	Q. That wasn't my question. My question
12	the money is in the bank at the beginning of the	12	was does this code section specifically apply to
13	budget and how they're going to spend it.	13	county sanitation districts?
14	A. Could be. There's no checks and	14	A. I don't know.
15	balances on budgets, never has been, never will	15	Q. Okay. And you said that there
16	be.	16	shouldn't be any impact to ratepayers and that was
17	Q. Right. But that's the way a public	17	based on your analysis that there's \$5 million in
18	entity functions. They don't function two years	18	surplus; is that correct?
19	ago on the audited documents, they're functioning	19	A. That's correct.
20	day to day on what's in the bank.	20	Q. But if rates had to be raised to pay
21	A. And I have to do my analysis based on	21	this penalty there would be an impact to the
22	what was and what is currently.	22	ratepayers; is that correct?
23	Q. Okay.	23	A. Could you ask that question again?
24	A. Not on what will be.	24	Q. If the district had to raise its rates
25	Q. You also said that many dischargers are	25	in order to pay this penalty, would that be an
	Page 87	1	Page 89

impact to the ratepayers? you're going to offer for the truth of the matter 2 A. If the rates were increased it would be 2 asserted. Okay? 3 3 a direct impact to the ratepayers, yes. MS. THORME: Yes. I just have one Q. And when you were considering the rates 4 clarifying question because Board Member Wolff was 5 of the district the only thing that was provided referring earlier to Mr. Appleton's testimony, 5 6 which was one of the documents that was excluded 6 by the prosecution team in evidence was 7 7 Exhibit 113 which were rates from 2006 to 2008, as evidence. were those the rates that you considered? 8 MR. YOUNG: Okay. 9 9 MS. JAHR: Right. We will -- the board 10 Q. So you were considering other rates 10 members will not be relying on any exhibit unless 11 that were not in evidence in this case? 11 it is used for those purposes. 12 A. No, the rates were effective in 2010. 12 MS. THORME: Thank you. 13 Q. Okay. But the prosecution team did not 13 MR. YOUNG: Okay. All right. So we 14 14 put those into evidence? will continue with Mr. Horner. And let me ask you A. I don't --15 15 something. Were you waiving your redirect? 16 Q. To be clear, which ones? 16 MS. MACEDO: No. I'm happy to do it now 17 A. I don't know. But it's directed -- it 17 or I'm happy to do it after board member 18 18 came from the district and it's your rate schedule questions. 19 that currently exists in the district. 19 MR. YOUNG: Okay. Why don't you do it 20 20 MS. THORME: Okay. All right. No now. 21 further questions. 21 22 22 MS. MACEDO: Do you want to take board REDIRECT EXAMINATION 23 questions? 23 BY MS. MACEDO: 24 2.4 MR. YOUNG: Do we have board questions? Q. Sure. So to the extent we should just 25 We do. All right. Let's take a break first. 25 clear the record, we've placed in front of Page 90 Page 92 1 (Recess taken.) everyone a document that was submitted by the 2 district that has been Bates stamped SLO 02503 MR. YOUNG: Just a couple of 3 housekeeping matters to take care of, then we'll through SLO 02537. And Mr. Horner, do you have 4 4 these documents in front of you? break for lunch. I received a request for one or 5 two of the public comment speakers that have a A. Yes, I do. 6 time crunch that would like to speak earlier in 6 Q. For the record I believe they are the 7 7 the day, and I'm going to grant that. Here's the independent auditor's report and financial 8 statements for the years ending 2009, 2008, and trade-off: If you were to speak at the end of the 9 then if you turn to Page 02520 that is the day you get three minutes, if I take you out of 10 order now you'll have two minutes. That's just a financial statement for the year ending June 30th, 2010. 11 trade-off I'm going to do. So Can I see a show of 11 12 12 hands so I get an idea of how much time I'm going A. That's correct. 13 13 to need for those that want to give up their Q. Okay. And this is where you had 14 minute and speak, I'll take you before we break 14 interacted with Ms. Thorme about the \$5 million 15 for lunch. I see one, two, three. So those three 15 surplus, correct? 16 we'll take before we break for lunch, just those 16 A. That's correct. 17 17 three at this point. Q. And you were assisting me with the 18 18 preparation of our rebuttal materials, you And then we just wanted to let counsel 19 prepared a couple of documents that we submitted, know, Melissa and Julie, what we're going to do, I 20 20 just want to make sure you're aware, we admitted a our rebuttal materials including documents 108 and 21 number of documents as hearsay documents. We're 21 113. These documents were submitted and you have 22 the opportunity to review them. They have not --22 going to rely on you, both of you, if there is a the district has not prepared -- or excuse me, the 23 23 document that you want admitted under a hearsay 24 district has not submitted any more recent 24 exception we're going to need to lay the 25 foundation and make sure we're aware of it which 25 financial statements? Page 91

1			
Τ.	A. That's correct.	1	this is Page 6 of 18 for Exhibit 113. And can you
2	Q. And Ms. Thorme showed you Mr. Yonker's	2	describe what this reflects?
3	declaration and some excerpts from that about a	3	A. This is the rate structure that's
4	proposed budget and where their money is and how	4	currently being used by the district, and this was
5	they have an inability to pay. Do you recall	5	proposed to the board by ordinance No. 2006-01.
6	that?	6	And it includes the rates that were submitted for
7	A. Yes.	7	approval up to May 1, 2010.
8	Q. And you testified briefly about the	8	Q. So the rates are more current than four
9	difference between a budget and an audited	9	years old, they're as current as May 1, 2010?
10	financial statement?	10	A. These yes. These were adopted by
11	A. That's correct.	11	the board and are currently operational.
12	Q. And it is your opinion that the board	12	Q. For my final question or series of
13	would not be able to make a finding of an	13	questions, you've testified in several ACL cases
14	inability to pay on a budget?	14	around the state, correct?
15	A. That's correct.	15	A. That's correct.
16	Q. Based on an audited financial statement	16	Q. Are you familiar with how the inability
17	from the year 2010, and now we're in the year	17	to pay defense works for dischargers?
18	2012, would it surprise you to learn that a	18	A. Yes.
19	\$5 million surplus has now been either spent or	19	Q. So once the prosecution team conducts
20	allocated in such a way that it cannot be used to	20	the review of documents how does the burden of
21	pay a \$1.4 administrative civil ability penalty?	21	proof then shift?
22	A. Yes, it would. And that conclusion is	22	A. It is on the discharger of the defense
23	based on the fact that the current income, current	23	to show that they have inability to pay.
24	expenses as reported in the last fiscal year's	24	Q. And is it your opinion in this case
25	document is very adequate to meet. There should	25	that they have the district has demonstrated an
20		2 3	
	Page 94		Page 96
1	be no negative balances. If a catastrophe, if	1	inability to pay?
2	something happened that was unforeseen, you could	2	A. Yes, as of end of fiscal year 2009,
	see a substantial decline in that balance, but I'm		2010.
~	see a substantial decline in that balance, but I in		
3	not aware that that in fact has happened	3	
4	not aware that that in fact has happened.	4	Q. Does the district has the ability to
4 5	Q. Okay. I wanted to direct your	4 5	Q. Does the district has the ability to pay the recommended penalty?
4 5 6	Q. Okay. I wanted to direct your attention	4 5 6	Q. Does the district has the ability topay the recommended penalty?A. Yes, that's right.
4 5 6 7	Q. Okay. I wanted to direct your attention MR. YOUNG: Hang on. Is there an	4 5 6 7	 Q. Does the district has the ability to pay the recommended penalty? A. Yes, that's right. MS. MACEDO: No further questions.
4 5 6 7 8	Q. Okay. I wanted to direct your attention MR. YOUNG: Hang on. Is there an objection?	4 5 6 7 8	Q. Does the district has the ability to pay the recommended penalty? A. Yes, that's right. MS. MACEDO: No further questions. MS. THORME: Mr. Young, if I could, we

THORME: Mr. Young, if I could, we just got copies of these documents and I didn't have them with me because they weren't in evidence. If I could have a little leeway to ask a couple questions. MR. YOUNG: Sure. You're referring to this?
4 5 6 7 8 9 10 11 12 13 14 15	Q. Okay. I wanted to direct your attention MR. YOUNG: Hang on. Is there an objection? MS. JAHR: No, I just wanted to clarify. You said last year's financial record. Are you referring to the 2010 financial year? When you had just stated you said the conclusion was based on the income and expenses from the last year's fiscal statement. MR. HORNER: Yes, 2010.	4 5 6 7 8 9 10 11 12 13 14 15	Q. Does the district has the ability to pay the recommended penalty? A. Yes, that's right. MS. MACEDO: No further questions. MS. THORME: Mr. Young, if I could, we just got copies of these documents and I didn't have them with me because they weren't in evidence. If I could have a little leeway to ask a couple questions. MR. YOUNG: Sure. You're referring to this? BY MS. THORME:
4 5 6 7 8 9 10 11 12 13 14 15	Q. Okay. I wanted to direct your attention MR. YOUNG: Hang on. Is there an objection? MS. JAHR: No, I just wanted to clarify. You said last year's financial record. Are you referring to the 2010 financial year? When you had just stated you said the conclusion was based on the income and expenses from the last year's fiscal statement. MR. HORNER: Yes, 2010. MS. JAHR: Okay.	4 5 6 7 8 9 10 11 12 13 14 15 16	Q. Does the district has the ability to pay the recommended penalty? A. Yes, that's right. MS. MACEDO: No further questions. MS. THORME: Mr. Young, if I could, we just got copies of these documents and I didn't have them with me because they weren't in evidence. If I could have a little leeway to ask a couple questions. MR. YOUNG: Sure. You're referring to this? BY MS. THORME: Q. Exhibit 114. So if you could put up
4 5 6 7 8 9 10 11 12 13 14 15 16	Q. Okay. I wanted to direct your attention MR. YOUNG: Hang on. Is there an objection? MS. JAHR: No, I just wanted to clarify. You said last year's financial record. Are you referring to the 2010 financial year? When you had just stated you said the conclusion was based on the income and expenses from the last year's fiscal statement. MR. HORNER: Yes, 2010. MS. JAHR: Okay. MR. HORNER: That's fiscal year 2010.	4 5 6 7 8 9 10 11 12 13 14 15 16 17	Q. Does the district has the ability to pay the recommended penalty? A. Yes, that's right. MS. MACEDO: No further questions. MS. THORME: Mr. Young, if I could, we just got copies of these documents and I didn't have them with me because they weren't in evidence. If I could have a little leeway to ask a couple questions. MR. YOUNG: Sure. You're referring to this? BY MS. THORME: Q. Exhibit 114. So if you could put upwe don't have this electronically either, so I
4 5 6 7 8 9 10 11 12 13 14 15 16 17	Q. Okay. I wanted to direct your attention MR. YOUNG: Hang on. Is there an objection? MS. JAHR: No, I just wanted to clarify. You said last year's financial record. Are you referring to the 2010 financial year? When you had just stated you said the conclusion was based on the income and expenses from the last year's fiscal statement. MR. HORNER: Yes, 2010. MS. JAHR: Okay. MR. HORNER: That's fiscal year 2010. BY MS. MACEDO:	4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	Q. Does the district has the ability to pay the recommended penalty? A. Yes, that's right. MS. MACEDO: No further questions. MS. THORME: Mr. Young, if I could, we just got copies of these documents and I didn't have them with me because they weren't in evidence. If I could have a little leeway to ask a couple questions. MR. YOUNG: Sure. You're referring to this? BY MS. THORME: Q. Exhibit 114. So if you could put upwe don't have this electronically either, so I would ask if we could put up the page that you
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	Q. Okay. I wanted to direct your attention MR. YOUNG: Hang on. Is there an objection? MS. JAHR: No, I just wanted to clarify. You said last year's financial record. Are you referring to the 2010 financial year? When you had just stated you said the conclusion was based on the income and expenses from the last year's fiscal statement. MR. HORNER: Yes, 2010. MS. JAHR: Okay. MR. HORNER: That's fiscal year 2010. BY MS. MACEDO: Q. Then we had a brief discussion about	4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	Q. Does the district has the ability to pay the recommended penalty? A. Yes, that's right. MS. MACEDO: No further questions. MS. THORME: Mr. Young, if I could, we just got copies of these documents and I didn't have them with me because they weren't in evidence. If I could have a little leeway to ask a couple questions. MR. YOUNG: Sure. You're referring to this? BY MS. THORME: Q. Exhibit 114. So if you could put up we don't have this electronically either, so I would ask if we could put up the page that you were testifying from, which I believe is Page 3 of
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	Q. Okay. I wanted to direct your attention MR. YOUNG: Hang on. Is there an objection? MS. JAHR: No, I just wanted to clarify. You said last year's financial record. Are you referring to the 2010 financial year? When you had just stated you said the conclusion was based on the income and expenses from the last year's fiscal statement. MR. HORNER: Yes, 2010. MS. JAHR: Okay. MR. HORNER: That's fiscal year 2010. BY MS. MACEDO: Q. Then we had a brief discussion about the current wastewater rates for the citizens of	4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	Q. Does the district has the ability to pay the recommended penalty? A. Yes, that's right. MS. MACEDO: No further questions. MS. THORME: Mr. Young, if I could, we just got copies of these documents and I didn't have them with me because they weren't in evidence. If I could have a little leeway to ask a couple questions. MR. YOUNG: Sure. You're referring to this? BY MS. THORME: Q. Exhibit 114. So if you could put up we don't have this electronically either, so I would ask if we could put up the page that you were testifying from, which I believe is Page 3 of that document. You had it pop up when he was
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	Q. Okay. I wanted to direct your attention MR. YOUNG: Hang on. Is there an objection? MS. JAHR: No, I just wanted to clarify. You said last year's financial record. Are you referring to the 2010 financial year? When you had just stated you said the conclusion was based on the income and expenses from the last year's fiscal statement. MR. HORNER: Yes, 2010. MS. JAHR: Okay. MR. HORNER: That's fiscal year 2010. BY MS. MACEDO: Q. Then we had a brief discussion about the current wastewater rates for the citizens of Oceano, and this was actually submitted with the	4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	Q. Does the district has the ability to pay the recommended penalty? A. Yes, that's right. MS. MACEDO: No further questions. MS. THORME: Mr. Young, if I could, we just got copies of these documents and I didn't have them with me because they weren't in evidence. If I could have a little leeway to ask a couple questions. MR. YOUNG: Sure. You're referring to this? BY MS. THORME: Q. Exhibit 114. So if you could put up we don't have this electronically either, so I would ask if we could put up the page that you were testifying from, which I believe is Page 3 of that document. You had it pop up when he was originally testifying.
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	Q. Okay. I wanted to direct your attention MR. YOUNG: Hang on. Is there an objection? MS. JAHR: No, I just wanted to clarify. You said last year's financial record. Are you referring to the 2010 financial year? When you had just stated you said the conclusion was based on the income and expenses from the last year's fiscal statement. MR. HORNER: Yes, 2010. MS. JAHR: Okay. MR. HORNER: That's fiscal year 2010. BY MS. MACEDO: Q. Then we had a brief discussion about the current wastewater rates for the citizens of Oceano, and this was actually submitted with the prosecution team's rebuttal documents and	4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	Q. Does the district has the ability to pay the recommended penalty? A. Yes, that's right. MS. MACEDO: No further questions. MS. THORME: Mr. Young, if I could, we just got copies of these documents and I didn't have them with me because they weren't in evidence. If I could have a little leeway to ask a couple questions. MR. YOUNG: Sure. You're referring to this? BY MS. THORME: Q. Exhibit 114. So if you could put up we don't have this electronically either, so I would ask if we could put up the page that you were testifying from, which I believe is Page 3 of that document. You had it pop up when he was originally testifying. So Dr. Horner, was this the document
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	Q. Okay. I wanted to direct your attention MR. YOUNG: Hang on. Is there an objection? MS. JAHR: No, I just wanted to clarify. You said last year's financial record. Are you referring to the 2010 financial year? When you had just stated you said the conclusion was based on the income and expenses from the last year's fiscal statement. MR. HORNER: Yes, 2010. MS. JAHR: Okay. MR. HORNER: That's fiscal year 2010. BY MS. MACEDO: Q. Then we had a brief discussion about the current wastewater rates for the citizens of Oceano, and this was actually submitted with the prosecution team's rebuttal documents and Exhibit 113, and I would like to point out that	4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	Q. Does the district has the ability to pay the recommended penalty? A. Yes, that's right. MS. MACEDO: No further questions. MS. THORME: Mr. Young, if I could, we just got copies of these documents and I didn't have them with me because they weren't in evidence. If I could have a little leeway to ask a couple questions. MR. YOUNG: Sure. You're referring to this? BY MS. THORME: Q. Exhibit 114. So if you could put up we don't have this electronically either, so I would ask if we could put up the page that you were testifying from, which I believe is Page 3 of that document. You had it pop up when he was originally testifying. So Dr. Horner, was this the document that you talked to me about earlier that you were
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	Q. Okay. I wanted to direct your attention MR. YOUNG: Hang on. Is there an objection? MS. JAHR: No, I just wanted to clarify. You said last year's financial record. Are you referring to the 2010 financial year? When you had just stated you said the conclusion was based on the income and expenses from the last year's fiscal statement. MR. HORNER: Yes, 2010. MS. JAHR: Okay. MR. HORNER: That's fiscal year 2010. BY MS. MACEDO: Q. Then we had a brief discussion about the current wastewater rates for the citizens of Oceano, and this was actually submitted with the prosecution team's rebuttal documents and Exhibit 113, and I would like to point out that these documents and rates are not four years old.	4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	Q. Does the district has the ability to pay the recommended penalty? A. Yes, that's right. MS. MACEDO: No further questions. MS. THORME: Mr. Young, if I could, we just got copies of these documents and I didn't have them with me because they weren't in evidence. If I could have a little leeway to ask a couple questions. MR. YOUNG: Sure. You're referring to this? BY MS. THORME: Q. Exhibit 114. So if you could put up we don't have this electronically either, so I would ask if we could put up the page that you were testifying from, which I believe is Page 3 of that document. You had it pop up when he was originally testifying. So Dr. Horner, was this the document that you talked to me about earlier that you were using to demonstrate a \$5 million surplus?
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	Q. Okay. I wanted to direct your attention MR. YOUNG: Hang on. Is there an objection? MS. JAHR: No, I just wanted to clarify. You said last year's financial record. Are you referring to the 2010 financial year? When you had just stated you said the conclusion was based on the income and expenses from the last year's fiscal statement. MR. HORNER: Yes, 2010. MS. JAHR: Okay. MR. HORNER: That's fiscal year 2010. BY MS. MACEDO: Q. Then we had a brief discussion about the current wastewater rates for the citizens of Oceano, and this was actually submitted with the prosecution team's rebuttal documents and Exhibit 113, and I would like to point out that these documents and rates are not four years old.	4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	Q. Does the district has the ability to pay the recommended penalty? A. Yes, that's right. MS. MACEDO: No further questions. MS. THORME: Mr. Young, if I could, we just got copies of these documents and I didn't have them with me because they weren't in evidence. If I could have a little leeway to ask a couple questions. MR. YOUNG: Sure. You're referring to this? BY MS. THORME: Q. Exhibit 114. So if you could put up we don't have this electronically either, so I would ask if we could put up the page that you were testifying from, which I believe is Page 3 of that document. You had it pop up when he was originally testifying. So Dr. Horner, was this the document that you talked to me about earlier that you were

- TRANSCRIPT OF HEARING **SEPTEMBER 7, 2012** Q. Okay. So did the amount of money in that's on the screen. 2 this financial report go down from 2009 to 2010? 2 MS. JAHR: Bates stamped SLO-60537. 3 3 A. Yes, it did. BY MS. THORME: 4 Q. Okay. And so the money that you're 4 Q. So does that \$5 million number that 5 looking at at the very bottom where it says 5 you're looking at include these reserve unrestricted 5.180985, is that the number that 6 6 accounts? 7 7 you're using for the \$5 million? A. No. No, the number that is used is the 8 Q. Why not? 9 9 amount of the current assets, which in 2010, I'm Because it doesn't. A. 10 just going to say fiscal year '09-'10 is 10 Q. Well, where is that money accounted for **11 \$5,640,248.** You have to subtract from that the 11 on the earlier slide? 12 current liabilities, which is in this case, again, 12 A. Okay. One of the problems that you 13 for the year **2010**, **\$515**,**160**. And that gives you 13 have with nonstandardized financial reports is 14 what is called the net current assets, which in that there is a whole degree of latitude that the 15 this case is \$5,125,079. auditors have in preparing these reports. A 16 Q. Where do you see that number? 16 comprehensive annual financial report dictates how 17 A. It's not on here. 17 all of these numbers will be prepared and 18 Q. Okay. Where did it come from? reported. The typical -- no, the mandated -- the procedure in a comprehensive annual report 19 A. Okay. It came from the total current 20 specifies that the current net assets are 20 assets. If I could go over there I could --21 Q. Yeah, you can go and point to it. 21 unencumbered, unencumbered either with respect to 22 A. Maybe the screen can be enlarged. Here 22 restriction or with respect to law or ruling. And 23 we go. Okay. The total current assets -- I can't that page right there is not what I'm concerned 24 quite read that, \$5,640,248. Net current assets 24 about. 25 25 is this number right here minus the total current Q. Okay. And you had talked with Page 98 Page 100 liabilities, which is \$515,169. That is what's Ms. Macedo about the rates, and those were 2 called your total net current assets. projected rates from an earlier time, projected to 3 Q. Is that not the same as essentially what they would be in a later time; is that 4 down at the bottom where it says net assets and 4 correct? some of it's invested and some of it is 5 A. No. 6 quote/unquote unrestricted? 6 The document that she had up on the 7 7 A. No. screen it said future rates as of, and then each 8 Q. So how is it different? 8 different year. 9 9 A. Well, what number are you referring to? A. Okay. An ordinance No. 2006-01 was put 10 10
- Q. Down at the bottom there's a 11 \$13 million figure for invested in capital assets and then unrestricted \$5.1 million which is

essentially in the same range of the number that 14 you're speaking to me about.

- 15 A. Your net assets includes a lot of invested capital and net related debt. It's 16 17 called other things, but that's not what we're 18 looking at in terms of ability to pay.
- 19 Q. Okay. So you're using the \$5 million 20 figure of cash and cash equivalence?
 - A. Yes.

21

25

- 22 Q. So if we can put up the last page of 23 this exhibit. It says note 9 reserves and 24 retained earnings.
 - MR. YOUNG: Next page after the one

- before the board of directors, these were proposed rates that were approved. 11
 - Q. Right.

12

13

14

- A. And now are currently in use.
- Okav. And what do those rates cover? Ο.
- 15 Those cover the rates to the
- 16 connections for the district.
- 17 Q. Okay. So that covers the treatment 18 plant and the trunk lines that are owned by the 19 district; is that right?
- 20 A. It covers whatever the district covers 21 to recover -- to charge service to recover to the 22 expenses.
- 23 Q. Do the satellite collection agencies 24 also charge rates for transport of sewage? 25
 - A. They do.

1 2	Q. And those are additive to the district's rate; is that correct?	1 2	Q. And do you know what the current rates are?
3	A. Only for those areas that pertain to	3	A. Well, it says right there.
4	the other their rate structure of their own.	4	Q. Do you know whether they've been
5	My understanding is that the South San Luis Obispo	5	changed since May 1st, 2010?
6	County Sanitation District furnishes services to	6	A. No.
7	two other districts. Is that correct?	7	MS. THORME: No further questions.
8	Q. No, it's three.	8	MR. YOUNG: Any redirect?
9	A. Well, aren't they included they're	9	MS. MACEDO: No.
10	one.	10	MR. YOUNG: Okay. Then we'll have
11	Q. No.	11	board questions. Let's start at the far end.
12	MS. MACEDO: She's not testifying.	12	Mr. Johnston, do you have any questions? We'll
13	BY MS. THORME:	13	just go down the line, Mr. Jordon, Dr. Wolff,
14	Q. I can't testify, but it will come out	14	Mr. Harris.
15	later in the day.	15	MR. JOHNSTON: Dr. Horner, I'm still
16	A. Okay. The \$16 is the recovery that it	16	trying to sort out this, and I admit reading
17	costs.	17	financial statements is far from my specialty.
18	Q. Okay. But then there are satellite	18	I'm looking at the final page of this auditor's
19	correction system agencies as well?	19	report, I believe it was shown earlier, the 2010
20	A. Yes.	20	auditor's report, and it's note 9 reserves and
21	Q. And do you know what those rates are?	21	retained earnings. So is it your understanding
22	A. I do. I've got them.	22	I see a reserve for capital replacement and
23	Q. Okay.	23	expansion. Is it your understanding that this is
24	A. If you want to discuss those.	24	the fund created that's set aside, I guess created
25	Q. For all three of the collection system	25	by connection fees and can't be touched?
	Page 102		Page 104
1	agencies?	1	MR. HORNER: That's the way this reads,
2	A. I do.	2	yes.
3	Q. Which collection system agencies do you	3	MR. JOHNSTON: Okay. And does that
4	have rates for?	4	so I'm looking at the there's a bottom number
5	A. Oceano CSD, City of Grover Beach.	5	there \$5,180,985 of total unrestricted net assets,
6	That's it. I have two.	6	and it's not clear to me why they would maybe
7	Q. Do you have what those monthly rates	7	this is term of art, but why they would call it
8	are?	8	unrestricted if it in fact is restricted to only
9	A. Yes, I do.	9	using for the specified purpose. Is that term
10	Q. Okay. And do you know whether the	10	unrestricted mean that they can use it for any
11	prosecution team put those into evidence?	11	purpose or is that do you have any sense?
12	A. No.	12	MR. HORNER: Procedures that are
13	Q. Okay. Exhibit 113.	13	established in the comprehensives annual financial
14	MS. MACEDO: Want me to pull it up?	14	report does not allow for any kind of what I'm
15	BY MS. THORME:	15	going to call, probably incorrectly, double
16	Q. No, we can do it. We have that one.	16	accounting. Okay.
17	If you can blow that first table up a little bit	17	The assets that are listed in your
18	for me, please.	18	balance sheet which are current assets must be
19	So you said these were the current	19	unrestricted. Those must exist as cash or cash
20	rates, but the last rate is these were adopted	20	equivalence or the accounts receivable, interest
21	in 2006, is that what you testified?	21	receivable pre-paid expenses. And they cannot
22	A. Yes.	22	appear in a proprietary restricted fund.
23	Q. So this says future rate as of May 1st,	23	MR. JOHNSTON: So what you're
24	2010. Is that the latest rate?	24	testifying is that if this accounting form were in
25	A. Yes.	25	the preferred format that this would be quite
			Page 105

TRANSCRIPT OF HEARING

```
for that project? Isn't this where it would show
    clear?
 2
                                                          2
                                                              up?
            MR. HORNER: Yes.
 3
                                                           3
            MR. JOHNSTON: Okay. But I'm trying
                                                                      MR. HORNER: What you're asking me for
 4
    to -- it's not.
                                                           4
                                                              is, if I understand your question, is, is the
 5
                                                              question on managing financial accounts, how would
            MR. HORNER: It's not.
            MR. JOHNSTON: So I'm trying to get at
                                                           6
                                                              you manage what you have and how you would
 6
                                                           7
 7
    whether you're able to testify one way or another
                                                              indicate on paper what you're doing. Okay. And
    as to whether there is a portion of the -- what
                                                          8
                                                              I'm reluctant to go there because that's certainly
 9
                                                          9
    vou're looking at, I believe the term vou used was
                                                              not my job.
10
    net unrestricted assets.
                                                          10
                                                                      MR. JORDON: But on the flip side
11
            MR. HORNER: Net current assets.
                                                          11
                                                              you're asking me to presume an alternative
12
                                                              scenario that you presented, right?
            MR. JOHNSTON: Net current assets.
13
                                                          13
                                                                      MR. HORNER: Absolutely.
            MR. HORNER: Right.
14
                                                          14
                                                                      MR. JORDON: Thank you.
            MR. JOHNSTON: That is in fact a
15
    reserve that they cannot legally touch for capital
                                                          15
                                                                      MR. HORNER: Hypothetically, if an
                                                          16 entity is planning what you said, a capital
16
    replacement and expansion. And are you able to
                                                              expansion, a project, what you should do is
17
    discern that from these documents?
                                                          17
18
            MR. HORNER: This document -- the
                                                          18
                                                              prepare the necessary funds to do that, to
19
    definition standard accounting definition for net
                                                          19
                                                              encumber your savings to be able to earmark that,
20
                                                          20 to be able to use it when it is required. And
    current assets is that it is unrestricted. It is
    primarily set aside or set for use for immediate
                                                          21 that's -- I get back to this CAFR, comprehensive
                                                          22 annual financial report, mandates that. That is
    contingencies and it is not earmarked for any
    particular use. That is the standard accounting
                                                          23
                                                              set on the formula. By saying that you had a
                                                              current asset you cannot have it encumbered. So
24
    definition.
25
                                                          25 their thinking about that is not evident to the
            MR. JOHNSTON: Okay. So what -- and I
                                                Page 106
                                                                                                          Page 108
    don't want to put words in your mouth, but my
                                                              person that's reading the financial statements.
 2
                                                           2
                                                                      MR. JORDON: So my experience is I
    understanding then from what you're saying is that
                                                              think a little difference than that, and maybe
 3
    if standard accounting definitions apply that the
                                                           3
 4
    restricted -- the connection fees restricted fund
                                                           4
                                                              we're just far apart on this word encumbered.
 5
    is not included in the net current assets?
                                                           5
                                                              Because if I have a 20 year schedule of unfunded
 6
            MR. HORNER: That's correct.
                                                           6
                                                              capital improvements those out years are subject
 7
                                                           7
            MR. JOHNSTON: I think I understand.
                                                              to city council or board of supervisor turnover as
 8
                                                           8
                                                              to what will be funded in the future or not, and I
            MR. YOUNG: Okay. Mr. Jordon.
 9
                                                          9
            MR. JORDON: Thank you, Mr. Chair.
                                                              don't think they're necessarily -- at one point in
10
    Good morning, Dr. Horner. I'm actually
                                                          10 time that they're restricted or encumbered. Those
    sympathizing with both side's points. My
                                                          11
                                                              monies can move back out again. But they're
11
12
    experience is that the city government at least is
                                                          12
                                                              certainly shown as -- my experience, they're shown
13
    that the use of the words encumbrances and
                                                          13
                                                              somewhere on a balance sheet or a fund or a bucket
                                                          14
                                                              as available funds being set aside for a future
14
    restrictions is a term that's played with in
                                                          15
15
    different ways by cities and also even within
                                                              capital project. That's my experience, so I --
16
    departments within the city.
                                                          16
                                                                      MR. HORNER: I understand.
17
                                                          17
            Could these numbers on this page
                                                                      MR. YOUNG: Is there a question?
18
    also -- while I understand the point you're
                                                          18
                                                                      MR. JORDON: That might not be proper
19
    making, could they also just not be -- also be a
                                                          19
                                                              in the way that you're describing it or the way
20
    pot that is being accumulated for long-term
                                                          20
                                                              you would apply to this particular situation. So
21 financial source on capital projects? Could they
                                                          21
                                                              going back to my question then, is it possible
                                                          22
    not have a 20-year list of capital projects and
                                                              that the top line there of $2.9 million is being
23
    this is the method they're accumulating funds
                                                          23
                                                              represented in that method?
                                                          24
                                                                      MR. HORNER: Well, I don't --
    until they are ready to do that project or until
                                                          25
                                                                      MR. JORDON: You don't know if it's
    they're ready to encumber or restrict those funds
                                                Page 107
                                                                                                         Page 109

TRANSCRIPT OF HEARING

```
possible?
                                                                       MR. JEFFRIES: Dr. Horner, I think
 2
                                                           2
                                                               there's some confusion that I'm hearing from some
            MR. HORNER: Well, it's possible, but I
 3
    think that's only in the management of the
                                                               of my colleagues of comparing the budget to a
 4
    district.
                                                               financial statement or an audited financial
 5
                                                           5
            MR. JORDON: Okay. Thanks.
                                                               statement. In governmental accounting it's very
 6
                                                           6
            MR. YOUNG: Dr. Wolff.
                                                               difficult to track some of these items.
 7
                                                           7
            MR. WOLFF: Thank you. In your
                                                                       You talked -- and there's been a lot of
 8
    testimony you addressed two issues, one is the
                                                               discussion about restricted funds. There are
 9
    ability to pay the fine, and then the second one,
                                                           9
                                                               restricted funds that are restricted by the vote
10
    which the first part we covered, was the
                                                          10
                                                               of the board and there's restricted funds by
11
    competitive benefit of not having performed the
                                                          11
                                                               government code.
    electrical repairs which were budgeted to
                                                          12
                                                                       Now, I know you said you didn't look at
13
    initially $200,000. And in the capital
                                                          13
                                                               restricted funds by government code, but did you
14
                                                          14
                                                               look at the budgets and their financial statements
    improvement activities the electrical system
15
    upgrades were listed as 04-MB-116, and as I
                                                          15
                                                               to look at restricted funds that were placed by a
16 understand those originally were estimated about
                                                          16
                                                               vote of a board? And those funds normally are for
17
    $200,000 to perform various electrical system
                                                          17
                                                               capital projects which could be changed by a vote
                                                          18
                                                               of the board by simple vote. Did you look at
18 upgrades. And earlier 01-MB-101 energy service
    project is a cogeneration installation, which if I
                                                          19
                                                               those as restricted funds or nonrestricted funds?
                                                          20
20
    recall was budgeted around $700,000.
                                                                       MR. HORNER: I assumed those were
21
                                                          21
            The justification also in the evidence
                                                               restricted funds.
22
                                                          22
    that were provided for the cogeneration was about
                                                                       MR. JEFFRIES: You assumed those were
    $120,000 year energy saving by installing the
                                                          23
                                                               restricted funds?
                                                          24
    system. That was one of primary economic element
                                                                       MR. HORNER: That is correct.
25 of the analysis.
                                                          25
                                                                       MR. JEFFRIES: So that would mean there
                                                Page 110
                                                                                                          Page 112
            So when reviewing competitive benefits
                                                              would be more cash available if the board decided,
2
    in allocating certain funds for certain activities
                                                              if they had an emergency, that they could by a
    versus other activities, when you reviewed the
                                                           3
                                                              vote and change that restriction to whatever they
4
    fiscal year of 2010 have you made any observation
                                                           4
                                                              wanted to do with it at that particular time.
5
    in terms of the ability of the district to commit
                                                           5
                                                              Now, did you do any comparisons from their budgets
 6
    some, you know, significant large capital
                                                           6
                                                              to their audited financial statement year endings
7
                                                           7
    equipment one way versus another, meaning $200,000
                                                              for each year, did you do comparisons?
                                                           8
8
    versus $700,000? And I'm not asking you, you
                                                                      MR. HORNER: No, I did not.
                                                           9
                                                                      MR. JEFFRIES: You didn't. So you just
    know, the technical question associated with
10 whether or not one would be more beneficial than
                                                          10
                                                              took the audited financial statements?
11 the other, but the affordability of being able to
                                                          11
                                                                      MR. HORNER: That's right.
12 spend $700,000 versus $200,000.
                                                          12
                                                                      MR. JEFFRIES: And a lot of audited
13
            MR. HORNER: No, I didn't. I did not
                                                          13
                                                              financial statements do not bring up all those
14 make that determination. My job is to determine
                                                          14
                                                              particular restricted funds that are normally in
                                                          15
                                                              budgets.
15 if there is a compliance project that was not
16 conducted or undertaken or practices that were not
                                                          16
                                                                      MR. HORNER: Yes, they do. The
                                                              restricted funds are listed as a financial
17 followed or procedures that needed to be upgraded
                                                          17
18 and to determine what the economic gain from that
                                                          18
                                                              statement.
19 by not doing -- either by avoiding it completely
                                                          19
                                                                      MR. JEFFRIES: Well, all restricted?
                                                          20
20 or delaying. And that's all my -- that's all I
                                                                      MR. HORNER: Yes.
21 did.
                                                          21
                                                                      MR. JEFFRIES: Okay. You took into
22
            MR. WOLFF: Thank you.
                                                          22
                                                              account for all the restricted?
23
            MR. YOUNG: Mr. Harris.
                                                          23
                                                                      MR. HORNER: Yes, but not as a budgeted
24
            MR. HARRIS: No questions.
                                                          24
                                                              item. I didn't look at the budgets. I only
25
            MR. YOUNG: Mr. Jeffries.
                                                              looked at the reported funds that were in the
                                                Page 111
                                                                                                          Page 113
```

1	proprietary.	1	MR. JEFFRIES: Calling me an expert
2	MR. JEFFRIES: Okay. And did you	2	witness or something?
3	separate those restricted funds? You did not is	3	MR. YOUNG: Well, you can ask the
4	my understanding.	4	witness the information that you're looking for
5	MR. HORNER: Yes.	5	instead of loading it up with a lot of
6	MR. JEFFRIES: You did?	6	information; so
7	MR. HORNER: Yes.	7	MR. JEFFRIES: Well, I have a lot of
8	MR. JEFFRIES: Oh, you did?	8	experience.
9	MR. HORNER: Yes. They are not	9	MR. YOUNG: We all do.
10	included in the financial current assets.	10	MR. JEFFRIES: I understand.
11	MR. JEFFRIES: Just to explain my	11	MR. YOUNG: I think it's best if you
12	question a little bit further, and maybe I'm	12	ask the questions, if you can, and not load it up
13	repeating myself. As I stated, there are	13	with so much stuff, you know what I mean?
14	government required restricted funds.	14	MR. HORNER: I think there's something
15	MR. HORNER: Yes.	15	that has not been discussed here that is pertinent
16	MR. JEFFRIES: There are restricted	16	to your question. I use the US CPA model that
17	funds that are placed on funds by the local	17	determines the ability to pay of the
18	board.	18	municipalities. Okay. In the priority for
19	MR. HORNER: Yes.	19	ability to pay we use current assets as the
20	MR. JEFFRIES: Okay. Did you separate	20	priority for payment. The second priority
21	those out again?	21	involves their ability to finance. Third, they go
22	MR. HORNER: Yes.	22	into raising fees for dealing with their operating
23	MR. JEFFRIES: You did?	23	income. So that is the last priority, that
24	MR. HORNER: Yes.	24	ability to pay. We didn't even get to the
25	MR. JEFFRIES: Okay. And that was	25	financing part of it because the assets were
	Page 114		Page 116
1	included in their ability to pay?	1	sufficient to cover the proposed ACL.
2	MR. HORNER: Yes.		MD 3FFFDIFC, 1 -41,, 46:-
		2	MR. JEFFRIES: Let me ask you this
3	MR. JEFFRIES: All right. Now, there	3	then: Your analysis of the three years that you
3 4	MR. JEFFRIES: All right. Now, there was an indication, I don't know, by somebody that	3 4	then: Your analysis of the three years that you presented to us, in your opinion with the trend do

Can you tell us what exhibit number you were referring to early on when you were talking about the 2004, 2005 budget? I think it had some discussion about the proposal for electrical system upgrade. MS. MACEDO: Number two. MR. YOUNG: That's Exhibit No. 2.
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	MR. JEFFRIES: All right. Now, there was an indication, I don't know, by somebody that said to raise rates you have to have a vote by the people, but you can also raise fees. Now, some people say well, fees are taxes, yeah, sure they are. Any time you have an increase from government it's a tax, I don't care what you call it, but you don't have to raise fees you don't have to have a vote of the people to raise fees. MR. HORNER: You have to have my understanding is with the district is that you have to have a majority of the board of directors. MR. JEFFRIES: That's right. They can raise the fees which is normal operating	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	then: Your analysis of the three years that you presented to us, in your opinion with the trend do they have the ability to pay the fine? A. Yes, they do. MR. JEFFRIES: Okay. Thank you very much. MR. YOUNG: Okay. Last question for you, Dr. Horner. Can you tell us what exhibit number you were referring to early on when you were talking about the 2004, 2005 budget? I think it had some discussion about the proposal for electrical system upgrade. MS. MACEDO: Number two. MR. YOUNG: That's Exhibit No. 2. Okay. All right. Any other board questions?
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	MR. JEFFRIES: All right. Now, there was an indication, I don't know, by somebody that said to raise rates you have to have a vote by the people, but you can also raise fees. Now, some people say well, fees are taxes, yeah, sure they are. Any time you have an increase from government it's a tax, I don't care what you call it, but you don't have to raise fees you don't have to have a vote of the people to raise fees. MR. HORNER: You have to have my understanding is with the district is that you have to have a majority of the board of directors. MR. JEFFRIES: That's right. They can raise the fees which is normal operating procedure.	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	then: Your analysis of the three years that you presented to us, in your opinion with the trend do they have the ability to pay the fine? A. Yes, they do. MR. JEFFRIES: Okay. Thank you very much. MR. YOUNG: Okay. Last question for you, Dr. Horner. Can you tell us what exhibit number you were referring to early on when you were talking about the 2004, 2005 budget? I think it had some discussion about the proposal for electrical system upgrade. MS. MACEDO: Number two. MR. YOUNG: That's Exhibit No. 2. Okay. All right. Any other board questions? Okay. Thank you, Dr. Horner.
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	MR. JEFFRIES: All right. Now, there was an indication, I don't know, by somebody that said to raise rates you have to have a vote by the people, but you can also raise fees. Now, some people say well, fees are taxes, yeah, sure they are. Any time you have an increase from government it's a tax, I don't care what you call it, but you don't have to raise fees you don't have to have a vote of the people to raise fees. MR. TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

```
fiscal years 2010 and 2011 which says, "As a
result, there have been several instances where
the wiring has failed and has caused an electrical
fire or loss of power."
```

5 Now I'd like to transition and tell you 6 about the sequence of events during December 19th 7 and 20th. The overflow we talked about today 9 overflow a predicted storm had brought nearly three inches of rain to the area; however, the plant was unattended by personnel on the morning 11 12 of the 19th until an alarm notified an operator 13 that an in-person response was needed. The former 14 chief plant operator arrived shortly thereafter, approximately 10:30 a.m., all four influent pumps 16 failed because of electrical problems. The CPO 18 emergency diesel pump to divert the flow from the headworks into the plant; however, the emergency

commenced on a Sunday morning. The day before the

17 and other plant personnel tried to use the

19

20 diesel pump had intermittent operational problems 21 throughout the day. In addition, the discharge 22 valve of the emergency diesel pump was in a closed

23 position and could only be partially opened due to 24 the rising water of the headworks room.

Shortly after the electrical failure

25

10

17

25 **state.**

This slide summarizes the investigative work the prosecution team did to develop the case. In addition, the regional board provided additional personnel from the investigative board, especially Matt Keeling early in the process, Katie DiSimone is here, and Harvey Packard more recently in the room also. The ultimate decisions as to whether to settle or file a penalty amount are always going to be made by the region.

So March 2010 after being called to assist, the office of enforcement conducted a facility inspection of the plant, followed by issuance of a notice of violation and 13267 order. And extensive review of the district's response to that NOV, followed by numerous technical meetings with the district both in person and on the phone. And additional investigation was conducted by the office of enforcement in the sewer backups in the private residences.

Settlement negotiations failed to 21 resolve the matter primarily because the disagreement concerning the volume. And the district's score kept changing, for example, in terms of the number of homes affected, how the district's net adjustment of law was applied,

Page 126

Page 128

```
sewage began to back up and overflow from manholes
   and other locations in the district's and Oceano's
   collection system and also backed up sewage inside
4
   of homes in Oceano. The overflow lasted most of
   the day on 19th and small spills persisted on
6
   20th. The pump discharge valve was fully opened
7
   by the district personnel around 2:30, an
8
   additional pump was borrowed from Pismo Beach and
9
   was operational around 6:00 p.m.
```

Moving to the next slide. Around 11 8:20 p.m. pump No. 3 was restarted and in 12 combination with the emergency diesel pump, around 13 ten o'clock p.m. the overflow had stopped. In 14 addition, on December 20th in the morning 15 additional sewer overflow was experienced in 16 several locations.

The regional board was notified of the 18 spill by the chief plant operator. Because of the 19 size of the spill and resource issues, the 20 regional board sought assistance from the State 21 Water Board Office of Enforcement in this case, 22 along with a number of other matter. The State 23 Water Board commonly does this type of practice 24 throughout the state to assist all regions in the

Page 127

determining, et cetera.

Settlement negotiations broke off May 2012, the complaint was issued on June 19th and the matter was set for hearing in September.

The actions and inactions of the district which led to the overflow and resulting discharge of untreated waste into homes and surface waters which ultimately reached the 9 Pacific Ocean was a violation of the district's 10 NPDS, the National Pollution Discharge Elimination 11 System permit and the sanitary sewer order.

This is a slide, a photograph that was 13 provided to us by the district. Here you'll see it's comprised of penalties for discharge violations, it also includes \$63,000 for nondischarge violations. These violations arise because of the district's failure to properly investigate and report the overflow that occurred in private residences. The backups in the private residences were clearly caused by the district's 21 overflow on December 19th and 20th.

Under the sanitary sewer order the district was required to report NC waste, and to track these types of spills and makes them publicly available. However, the district has

dischargers.

And while the district recorded at various times the number of difference homes being affected, our investigation confirmed 11 separate residences experienced sewer backups shown on the slide. Where a sewage backup inside the home, 10 either from a toilet, sink or tub or a combination 11 of those three. The integrity of the 12 self-reporting program that we have with CIWQS 13 depends on the accuracy of information submitted 14 by the discharger such as the district.

15 The language in the actual sanitary 16 sewer order shown here, it clearly states that the 17 district is required to report these spills 18 because it caused the spill. A sanitary sewer 19 overflow here in the slide is defined as, and I'll 20 read it, wastewater backup into buildings and on 21 private property that are caused by blockages or 22 flow conditions within the publicly owned portion 23 of the sanitary sewer system.

Because the district failed to 25 investigate and comply with reporting for all 1 MR. FISCHER: That's correct. That is 2 a nondischarge part, we wanted to cover that, it was brought up at the beginning, talking about 3 nondischarge violations.

MS. MACEDO: And Ms. DiSimone will go over the discharge violations and how we arrived at the penalty on the greater detail, but I don't have any further questions for you.

MR. YOUNG: Ms. Thorme.

CROSS-EXAMINATION

12 BY MS. THORME:

13 Q. Thank you. Good morning, Mr. Fischer. 14 Make sure we're still in the morning. Were you the primary author of -- can we get it turned over 15 16 to us so we can -- were you the primary author of 17 Exhibit 1, the technical report?

A. I was one of the authors of that report.

Q. And who else was an author?

21 A. Leo Sarmiento and Dr. Matthew Buffleben 22 who are both in the room here. Matthew's here and 23 Leo's here.

Q. Okay. And are you a civil engineer?

A. I'm a mechanical -- a registered

Page 132

Page 130

known sewer backups 401 days late for the 2 certification we included the \$63,000 penalty. 3 The maximum penalty could have been assessed at \$2.4 million; however, the prosecution team 5 exercised discretion to collapse each of the 6 violations to a maximum of 38 each yielding a 7 \$63,000 penalty here. This penalty affects 8 reporting violations only for six residential backups that the district admits occurred at all 10 and certified late as private lateral through the

To the extent the prosecution team 13 later discovered additional five backups that were confirmed by interviewing residents, that should be reported by the district and CIWQS, and those are also subject to penalties.

Thank you, and I'd be happy to answer any questions at this time that you may have.

MR. YOUNG: Ms. Macedo, do you have any further questions for him or is it now cross-examination time?

MS. MACEDO: Yeah, it's cross. I guess 23 on this slide I just wanted to clarify that the maximum penalty, Mr. Fischer, is for reporting violations only and not the discharge violations?

Page 131

mechanical engineer for the State of California.

- Q. Okay. And so is it within your professional specialty to render a professional opinion in a matter of a civil engineering nature?
- A. Please explain that. I don't understand that question.
- Q. Well, it's my understanding that it's separated out by categories in engineering, so 10 there's civil, there's electrical, it's kind of 11 like a doctor, you know, where you're a brain surgeon and not delivering babies, that kind of 13 thing.
 - A. I don't have an answer for you. Are you saying that I shouldn't have stamped this report, is that what you're asking me?
 - Q. I'm just asking what the limitations of your engineering skills are and do they cross into the civil engineering?
- A. We have a registered civil engineer 21 registered on this report. I'll certainly delve into those areas. Dr. Matthew Buffleben is a registered civil engineer.
- Q. Have you ever worked for a city or a 25 sanitation district?

A. No. I have not. BY MS. THORME: 2 Q. Has Mr. Sarmiento? 2 Q. So you've actually done volume 3 3 calculations for those spills where you've A. Yes, he has. 4 Q. Okay. And --4 investigated? 5 5 A. Yes. A. Extensively. 6 Q. Okay. And how many of those spills 6 Q. He's not testifying here today, though, 7 7 were during flood events? is he? 8 A. He's not testifying here today. 8 I don't know. 9 Q. How many sewer spills have you dealt 9 Q. Okay. And how many sewer spill 10 with personally? 10 enforcement actions have you worked on? 11 11 A. Are you talking about SSOs, all of them A. Again, out of the 30 numerous on-site, 12 or are you talking about sewer spills in homes or 12 you know, investigations, inspections I've done 13 are you talking about sewer spills from collection 13 there's been a handful, I can't give you an exact 14 systems? number, probably between five and ten. 14 15 Q. I'm talking about how many sewer spills 15 Q. Okay. And how many times in those 30 16 have you responded on the day that a spill has 16 cases that you've worked on has the water board 17 questioned the sewer system operator spill 17 happened? A. I'd have to say none on the day that volumes? 18 18 19 it's happened. 19 A. I can tell you this, that the whole 20 20 purpose of these inspections are verifying the Q. So how many sewer spills have you 21 actually estimated volumes for besides this truth of what's being reported into our database 22 system. So we go out there to verify what we have 22 **case?** 23 MS. MACEDO: I'm going to object to the 23 certified in our database matches what the records say, and it doesn't always line up. So that's 24 extent that you're questioning Mr. Fischer about 25 mostly what we do. In terms of the number I don't 25 the volume of the spills. We designated Page 134 Page 136 Dr. Buffleben on that subject. have a number for you, but numerous. 1 2 MR. YOUNG: But I think she can ask the 2 Q. But normally in these sewer spill cases 3 question and if he can't answer the question --3 isn't the volume really related to the estimated 4 4 start and stop time? MS. MACEDO: I'm happy to let him 5 answer, but we did describe areas of testimony and 5 A. It may be; however, what we're finding Mr. Fischer was not designated on that subject. as the office of enforcement joined at the head 6 7 7 MR. YOUNG: Okay. But his name is on with our division of water quality who runs this 8 8 program is the majority of the spills we this report, right? It does contain that 9 information. investigate do not have accurate estimations on 10 MS. MACEDO: Okay. This information 10 the books what actually happened. And this is the 11 11 first case I'm aware of where we actually did will be covered -- I mean, to the extent that we 12 were going to present our entire case and then 12 extensive engineering analysis on our own to look 13 allow the witnesses to be cross-examined as a 13 at everything that was submitted to us. Often we don't get these records; so --14 team, Dr. Buffleben is going to cover extensively 14 Q. But in a sewer spill case they have to 15 how our methodologies differ, so I'm going to 15 16 allow Mr. Fischer to answer, but if he wants to report within two hours of the spill starting; isn't that correct? 17 defer to Dr. Buffleben he can. 17 18 MR. FISCHER: I would like to defer to 18 Α. That's not correct. 19 Dr. Buffleben, but I can tell you that I've done 19 Q. Why is that not correct? 20 A. If you read the amended MRP at the over 30 inspections, investigations of my own 21 myself, and done about 50 at the State Water Board 21 water quality board 008-0002-EXEC page --Attachment A, Page 1 it says, "For any discharges 22 the last few years. And so it would be hazardous 22

23

24

Page 135

of sewage that result in a discharge to a drainage

channel or a service water, discharger shall as 25 soon as possible, but not later than two hours

25 /////

23 for me to even attempt to say how many I've been

24 involved in and the calculations, numerous.

23

- Q. Okay. So someone has to be notified 5 within two hours of becoming aware, and then if it's a category one spill they have to have their certification in within 15 days; isn't that correct?
- A. They have to have additional stuff in 10 there, they have to have a draft report 11 requirement within three calendars days or a certified report in the system with CIWQS within 13 **15** calendar days.
- Q. So that is a pretty compressed schedule 15 to get all of that information into CIWQS?
- 16 A. If you say so. I don't agree with that 17 and so --
- 18 Q. But my point is, is they're scrambling, number one, to stop the spill; number two, to 20 notify people within two hours of becoming aware, get their three-day report in, get their CIWQS 22 stuff in and at the same time they're 23 investigating all of the facts. That is on the 24 ground running to get that done, whereas the 25 office of enforcement can come in later and has

regulatory program has -- is beneficial and is working. And like I said earlier, we work in large step with the people that manage this program, I used to manage this program, the longer I have a history in it, we're out there to verify 6 7 again what's been certified under penalty of 8 perjury into our data system is true and correct 9 when we go out to the site. If we don't agree with it we'll do our own analysis and come up with 11 our own analysis of what was we think is true and 12 correct.

- Q. Okay. Have you ever seen a case in 14 California where the upset defense has been allowed?
- 16 A. Are you talking about both combined 17 sewer systems that take both storm water and 18 sanitary or just separate sanitary sewer systems?
- Q. In any case. 19
- 20 A. No, I have not.
- 21 Q. Okay. Are you aware that there's 22 already a shortage of qualified sewer system and 23 treatment plant operators in California? 24
 - No, I'm not aware of that.
 - Okay. How many times has the office of

Page 140

Page 138 the benefit of additional time to make tweaks to

estimates that might not be available to --MS. MACEDO: No question pending.

BY MS. THORME:

Q. -- to the district; isn't that correct?

- A. As the office of enforcement action we're going to look at whatever the discharger does. If they're up to their eyeballs with one 10 person out there running around trying to get 11 everything done it may be a violation and we'd 12 consider that in the enforcement action. It's not 13 what's being discussed here today.
- Q. But isn't essentially the office of 15 enforcement second guessing the estimates that 16 were made by the district?
- 17 A. Every investigation that we conduct we 18 went to get to the truth of whether the spill 19 volume was reported correctly. So this is no 20 different than any other case that we did. We 21 take a look what was submitted to us, if we don't 22 agree with it we do our own analysis.
- Q. But why would anyone want to be a sewer 24 system operator if they make their best estimate 25 and someone comes in and second guesses them?

enforcement performed a volume calculation for a 2 sewer spill?

A. I mentioned it earlier, I think there 3 4 would be too many for me to count. Like I said,

5 30 sites, some sites can have up to a thousand 6 spills. So, you know, what we typically do when

7 we did out, to look at all thousand is

8 impractical, we might look at ten. So it would be

numerous; however, I can tell you that for the ten

we do check we look at all the records and we

11 interview all the people involved with the spill,

determining the start time as mentioned earlier,

13 other factors that we need to evaluate whether

it's truthful what they reported. 15

Q. Do you conduct sewer spill training?

16 A. I used to, not anymore.

> Q. Okay. Did you present in May of 2011 a sanitary sewer overflow reduction program training?

A. I don't remember.

21 Q. Bringing up Exhibit 66, does this look 22 familiar to you?

23 A. I want to just make clear that I'm one 24 of three staff that work on this program. I'm on 25 the enforcement side, we have two other full-time

- TRANSCRIPT OF HEARING 1 staff that work on the compliance side. It could 1 Approved, I -- okay. 2 -- that was recommended, why are they be either one of us giving this presentation. I don't see my name on here, it's possible it could being challenged as being wrong? have been mine. 4 A. This is not inclusive of every method 5 5 Q. But is this coming from the State Water in the state that you would use to estimate a 6 Board and their training of operators? 6 sewer spill. There's many iterations of what 7 7 A. We don't train operators as the office you're looking at here. These are in compliance, 8 of enforcement; however -you're going to hear about it more later. That's 9 9 MR. YOUNG: Mr. Fischer, why don't you all I have to say. 10 Q. Okay. Now, you had mentioned that 10 just try to answer the question as it's posed as 11 best as you can. 11 there's this sanitary sewer overflow waste 12 THE WITNESS: I would say yes. discharge requirement and I'm going to call that 13 13 SSO WDR. BY MS. THORME: 14 14 Q. If you can go to the next line in that A. Sure. 15 training, same page. 15 Q. Okay. And that SSO WDR is where you 16 A. This is not my presentation, by the 16 got the designation of sanitary sewer overflow 17 17 that you referred to in your presentation; is that way. 18 18 Q. But this is training that has been done correct? 19 by the State Water Board, and are these various 19 A. Yes. It's on Page 5 of the order, 20 methodologies that the State Water Board has Section 8 definitions. 21 presented as ways of estimating sewer spills? 21 Right. So it's on Exhibit 56-5? 22 22 A. This is not a complete list, but this Can I just check to make sure it's the Α. 23 is a partial list of ways you could do it. We 23 same? 24 24 learn every day there are more and more. Q. Sure. 25 Q. Okay. And the next line on that page, 25 I'll assume that it is. We can Page 142 Page 144 please. So this is stating that volumes can be continue. 2 estimated using various approaches, is that true, Q. We can pop it up if you want to see 3 Mr. Fischer? 3 that. 4 4 A. Yes. A. I've got it right in front of me, so no 5 5 Q. Okay. And that the spill circumstances problem. may dictate which method is appropriate and 6 Q. I just want to make sure that we're 7 7 whether multiple methods need to be used; is that getting that definition from the same place. 8 correct? 8 A. Okav. 9 9 Q. So you're comfortable that that's in A. 10 Q. And that the person estimating the 10 the sanitary sewer overflow WDR? A. Yes. 11 spill should make the best judgment on which 11 12 method to use? Q. Then that classifies what a sanitary 13 A. The person doing it, sure. 13 sewer overflow is, and then the monitoring and 14 Q. Okay. And that there are other reporting program is a separate document from the 15 engineering estimating methods that might be 15 waste discharge requirements; is that correct? 16 used? 16 A. That's correct.
 - A. True.

17

18

- Q. Okay. And wasn't this training done 19 after the sewer spill happened in 2010?
- 20 A. It wasn't my presentation, but it 21 appears it's in May 2011, I haven't verified the 22 date, if you say so, okay.
- 23 Q. Okay. So given that the district used 24 one of these approved methods in the middle slid 25 on that page --
- 17 Q. So that is our Exhibit 57. So then 18 does that document bring down the different types of sewer overflows into different categories? 19
 - A. That in fact does.
- 21 Q. Okay. So a category one spill, can you 22 describe that for me?
- 23 A. Category one spill is -- and I'll just 24 read it so there's not any mistakes.
 - Q. We have it up here in the screen if you

SEPTEMBER 7, 2012

TRANSCRIPT OF HEARING want it. 2 A. It's right here. "All discharges of sewage and ultimate failure in a sanitary sewer 4 system that equal or exceed --5 Q. You might want to slow down a little 6 bit. 7 A. I'm sorry. "Discharges that exceed a thousand gallons result in discharge to a drainage 9 channel and/or a service water or discharge into a pipe that was not fully captured and returned to 11 the sanitary sewer system." 12 Q. Okay. And then if you can go to the 13 next page 57-3 there's also a category two spill and a private sewer lateral discharge? 15 A. That's correct. Wait a second. 16 O. So basically the category two is any 17 other noncategory one spills; is that correct? 18 A. Anything that didn't go to service 19 water over a thousand gallons or is not fully 20 captured and returned. 21 Q. And then there are private sewer 22 laterals which are generally in-home spills? 23 A. That is not correct. Those are private 24 lateral sewage discharges defined here in the MRE 25 PLSDs. Page 146 Q. Okay. Aren't many private sewer 2

here, don't you have to tell the location of the SSO by entering GPS coordinates?

- 3 A. I can tell you because we've studied 4 this and we've seen this in practice with many of 5 the audits, many discharges simply had five 6 manhole overflow in one location and that's 7 acceptable at this time in our database.
 - Q. Okay. So also paragraph G says that you have to have the SSO scores which identify a manhole clean-out or et cetera. So does that not indicate that there's a specific locations for each spill that you're supposed to be reporting?
- A. That's an example. There could be many 14 other sources.
 - Q. If you could pull up Exhibit 68 for me, please. Doesn't the CIWQS reporting program currently require that input from each manhole be entered into CIWQS? A. Like I said earlier, Ms. Thorme, it
- 20 doesn't require -- the order doesn't require that. CIWQS has been set up to do that, but in practice that's not what happens, and that's not what we 23 have today in the system. If you talk to the program staff and we've talked to them. It's in 25 there both ways. It can be one location even

Page 148

laterals in-home spills?

A. The in-home spill that you're referring to here, can you define that?

Q. No, I'm not referring to any spill. I'm just saying in general many private sewer lateral discharges are in-home spills?

A. I don't know the answer to that.

Q. Okay. Or they can be from someone's clean-out on their lateral; is that correct?

A. Correct.

3

Q. Okay. So if we can go to Page 4 of 13 Exhibit 57, please. Does the sanitary sewer overflow WDR require that estimates be given for each spill location?

A. No, it does not; however, for wastewater backup into private --

18 Q. I'm not talking about in-home spills at 19 this moment. I'm just talking about the 20 requirements of the MR.

A. Well, wastewater backups in buildings 22 on private property, those are defined in the 23 order. Those each individually have to be 24 reported. Nothing else does.

Q. Okay. But if you look at paragraph 9

though it was multiple locations or it can be one 2 individual location and be certified.

3 Q. So on this it has physical location 4 detail, so this is a blank CIWQS score so it 5 doesn't have anything entered into it, but at 6 paragraph three it says spill location name, four, 7 latitude of spill location, five, longitude of 8 spill location. If you have multiple spill 9 locations you're saying that they don't have to enter each one of those spill locations where they 11 know it's coming out of a manhole at a certain 12 location?

A. I'm saying if you talk to the program staff right now they are finding it acceptable in one central location if you have multiple for the non-wastewater backups in the homes that are not defined in the order.

Q. Okay. But how would you put that into the form?

20 A. Like I mentioned earlier, it's up to 21 the discharger to do this. We have set up a 22 database to the individual; however, there's 23 nothing in the order that says every single 24 location must go in to CIWQS independently.

Q. So you never instructed anyone at the

Page 149

1	district to input each manhole's data	1 n	need to be reported if the spill occurs from a
2	separately?		single event?
3	A. I don't actually remember what I told	3	A. That's incorrect. The office of
4	you now.		enforcement, my job is not to do anything with the
5	Q. Can I have Exhibit 46-9, please.		program; however, like I said earlier, I

SEPTEMBER 7, 2012

- A. Yeah, it's currently stated for the 2 board the private lateral sewage discharges that 3 are not caused by failure flow condition within a 4 sanitary sewer system publicly owned are proposed 5 to be voluntarily reported in to CIWQS. So yeah, 6 we're not mandating those all have to be reported 7 in to CIWQS; however, we're still looking for the records for those sessions here about record keeping that's related just for the record. 9 10
- Q. Okay. And when was the ACL complaint issued in this case? 11
- 12 A. The ACL was issued on June 19th, 13 **2012.**
- Q. And after that complaint was issued did 15 staff and legal counsel from the office of 16 enforcement go down to Oceano in July and August of this year? 17
 - A. Yes, we did.

14

18

19

3

8

9

10

11

14

18

19

- Q. Did you talk to individual homeowners 20 trying to determine if there were more in-home discharges?
- 22 A. The office of enforcement's 23 investigative process includes taking more than 24 one staff in the field to investigate whether or 25 not -- what the impact from the still was, period.

answer for you. Q. Are you aware that the district

process took a year and a half, so I don't have an

meetings with the district back and forth. This

- undertook a great deal of outrage to try to determine where the private home spills were?
- No, the only evidence that I saw from the district asked about if you saw a manhole overflowing.
- 10 Q. Can we have Exhibit 67, please. Have 11 you seen this exhibit, Mr. Fischer?
 - A. I have.
 - Q. Okay. So what do you think this document is?
- 15 A. This is a spreadsheet that was given to us of some of the investigative work done by the 16 17 district to basically look at the different homes 18 in the area if they were impacted by sewage.
 - Q. So in the ones that were in read that were the ones that were reported in the CIWQS where they had information they reported those in-home spills?
- 23 A. Our evidence I believe we only have six 2.4 that were reported as private lateral sewage discharges in CIWQS, so that looks like more than

Page 156

Whether it was private lateral -- I'm sorry, 2 wastewater map in the home --

MR. YOUNG: Excuse me, could you just give her a direct answer? It sounded like a yes or no to me.

THE WITNESS: Okay. Yes.

BY MS. THORME:

- Q. Okay. And why would you make so much effort investigating in-home spills if they're not required to be reported?
- A. That's where we differ, and so the 12 answer is those are required to be reported and 13 we're going to explain more about that later.
- Q. Okay. And if you were so concerned 15 about these in-home spills why didn't you come 16 down to this investigation right after the spill event when these issues were very clear in people's mind and not a year and a half later?
- A. This is a complex investigation with a 20 lot of different components to it. We never 21 stopped investigating until the complaint's 22 issued, this is the way it happened. We did not 23 get word from the regional board right when the 24 spill happened to come out and check it out.

25 There was a delay in that. We had numerous

six from here.

Q. When did the district report in-home spills that it was aware of?

- A. The certified documents that we have are March 6th, 2012 certified by the district for CIWQS for the wastewater backup to the private residences, again, certified as private lateral discharge reports. We don't have -- that's what we have, excuse me.
- Q. Okay. And can we get Exhibit 7, please, the first page. So this is a spreadsheet, we have no idea who prepared this or where it came from, but it says on there "SSO volumes certified in CIWQS as of 10/5/11." Where did that date come 15 from?
 - A. I don't know.
 - Q. If you could get the next page for me, please. This is one of the CIWQS reports for one of the in-home spills, that if you could blow up the first half of that for me, please. So this states that the draft was submitted on 3/6/12, which is the first version of the draft that you see in paragraph No. 2, and it was certified the same day. So I believe the allegation was that they waited to certify their reports and it was

Page 155

	TRANSCRIPT OF HEARING		SEPTEMBER 7, 2012
1	untimely certification. So if it was reported and	1	were category two spills?
2	certified on the same day how is that an untimely	2	A. No.
3	certification?	3	Q. Okay. Did you check to see it there
4	 A. Let me read to you the actual language 	4	were permits for those devices at the county?
5	out of the permit, that's what we go by. And it	5	A. No, we didn't.
6	says in the monitoring reporting program	6	Q. If the reason there was a sewer backup
7	2008-0002-EXEC, Page 2 it says, "Category two	7	into the house was the lack of a required backflow
8	SSOs. All SSOs that meet the above criteria for	8	device, then how was that the district's
9	category two SSOs must be reported to	9	responsibility?
10	MR. YOUNG: Slow down	10	A. My response to that is a backflow
11	MS. THORME: We can pull this out so	11	prevention device can be a sewer relief valve that
12	the board members can see it.	12	allows sewage to come out of from garden into the

16	A. Okay. No. 5 here, "All SSOs that meet	16	sewage lateral sewage discharges as defined here
17	the above criteria for category two SSOs must be	17	on Page 2 of the MRP.
18	reported to the online SSO database 30 days after	18	Q. I'm not sure that answers my question.
19	the end of the calendar month in which the SSO	19	Can you read that question back for me,
20	occurs."	20	please.
21	Q. And how do you categorize these as	21	(Record read.)
22	category two spills?	22	THE WITNESS: The order says what it
23	 A. These are spills that don't meet the 	23	said. I don't have the authority to change the
24	criteria for category ones as certified by the	24	order, so we look at the order and the orders says
25	district and that's what we want.	25	the SSO caused by the failure in the publicly
	Page 158		Page 160
1	Q. But in paragraph six doesn't it say,	1	owned portion of the sanitary sewer system. As
2	"All sewage discharge that meet the above criteria	2	stated before, that's how I came up with the
3	for private sewer lateral discharges may be	3	determination.
4	reported"?	4	BY MS. THORME:
5	A Okay That's the part we're missing	=	Put the definition of private lateral

8

9

10

11

12

13

14

15

17

20

21

22

- A. Okay. That's the part we're missing here. Let's go to page -- the sanitary order. Do you have that still? Okay. I'm sorry, it's in the same document on the top of Page 2. Actually 8 it's above this. Yeah. No. 3, this is private lateral sewage discharges, sewage discharges that 11 are caused by blockages or other problems within 12 privately owned laterals.
- Q. When you interviewed homeowners during 14 your investigation did you inquire whether those homeowners each had a backflow prevention device as required a state law and county ordinance?

17 MS. MACEDO: I'm going to object to the 18 extent it calls for legal conclusion.

19 You can answer whether you interviewed 20 them.

21 THE WITNESS: I don't believe we asked 22 everybody that question, no.

BY MS. THORME:

13

24

Q. Did you confirm the existence of these devices in each of the 11 instances that you said

Q. But the definition of private lateral sewage discharge says problems within a privately owned lateral. So if the problem in the privately owned lateral is they don't have a backflow prevention device to keep the sewage when it's surcharging in the main out of the house, that was our argument is that that is not the district's responsibility.

So I mean, maybe it's semantical or -but there are two different definition here. So one of the questions I have for you, if you can put up Exhibit 480-2 is you had showed this earlier and had little circles around things, and we don't have that document, but it looks to me that there's approximately 32 homes in these two areas.

A. Sounds about right.

So your investigation found 11 of them had them. So potentially the other houses have backflow prevention devices and didn't flood. We need to know why all the houses didn't flood. Do

Page 161

SEPTEMBER 7, 2012

vou have an answer for that?

2

5

6

7

13

14

22

23

5

6

7

8

9 10

11

12

14

15

23

A. I think you're going to hear about this a little bit more later when Matthew talks about the volume. So I don't have an answer for you right now.

Q. Okay. So in your technical report if we could go to Exhibit 1, Page 18, please. So it says, "As required under the amended MRP Section A-6, the discharger failed to certify each of the six individual sewer backup reports in 11 CIWQS database within 30 day after the end of the calendar month." So if we could switch back and pull up side by side A-6 on 57-3.

So A-6 is the private sewer lateral 15 discharger. So on the one hand you're telling us 16 that it's not a private sewer lateral discharge and in your technical report it's saying that it 18 was required for them to certify these backups within 30 days under A-6 which says that it may be 20 reported and there's no certification requirement. Can you explain that, please?

A. Can I see the technical report?

O. Let me switch it back.

24 A. You know, I believe we already 25 submitted some corrections that are oversights in

MR. BROSS: I'm Larry Bross. I do live

2 in Oceano. I didn't have a back spill. I'm

concerned about the fact that only the SAND

district was chosen by the prosecution team for

5 liability here, and I think it goes beyond the

6 SAND district. I think the county -- because you

7 see, if you don't have a flood you won't have

these problems. And I was here in '82 when we had

9 a greater storm than we had then. It was the

perfect storm, we had the high tide and the storm

11 coming at the same time. That's when Pismo pier

went down. None of this was flooded, none of it.

13 Okay. And understand this, that nothing was

14 flooded by the Arroyo Grande Creek, it's Meadow

15 Creek that -- I haven't got enough time to explain

16 to you, but it's Meadow Creek that creates this

17 situation. And it's the gate in the levy that is

18 the gravity gate, because you see, Meadow Creek

19 runs into the Arroyo Grande Creek under the levy. 20 And I was there in '82 when we lifted the gate and

the water flowed out and there was no story.

22 Okav.

23 And the county could have done the same 24 thing this time, they didn't. So I believe that 25 they are liable. All right. And go from there --

Page 162

Page 164

this report in some lengthy amount of documents, so I don't know if that was included in the 3 corrections or not, but we'll take a look at it 4 right now.

MR. BUFFLEBEN: Yes.

THE WITNESS: What page is that, Melissa?

MS. THORME: Page 18. Then can we bring up the administrative civil liability complaint, please? Page 6, paragraph 24. It must be after that.

MR. YOUNG: I think this is a good time 13 for us to take a break.

MS. THORME: Okay.

MR. YOUNG: So we'll resume --16 actually, what we need to do is we have three people that I'm going to take out of order, then we'll take our lunch break. You probably have a lot more for him, I don't know, but I've got to call a timeout at some point on him and we'll 21 switch to the three people that have raised their 22 hands.

Sir, we'll start with you, if you can 24 come over here. So you'll each have two minutes each. Okay. And please state your name.

Page 163

24

and let me say one more thing. Oceano has a lot 2 of very poor people there. And I don't care what 3 you say, the rates will be raised. A resident in

4 Oceano just looks at the bill, it's water which

5 has just been raised. There are going to be

6 people, farm workers who are going to be losing 7 their homes, okay, and not going to be able to pay 8

because of this action. Thank you.

9 MR. YOUNG: Thank you, Mr. Bross. 10 Okay. Julie Sacker.

11 MS. STACKER: Good afternoon. My name 12 is Julie Stacker and I did swear to tell the

13 truth. I didn't think I had anything to offer 14 today's proceedings until I read the letter from

15 Mayor Ferrera to your board, specifically with

item No. 2, he tries to say derogatory things

17 about the prosecution. What he says is something 18

about how a local news agency acquired letters 19 from assemblyman Katcho Achadjian. I was in a

20 sanitation district meeting where Mr. Wallace 21

spoke about its asking our legislatures 22 Assemblyman Achadjian and Senator Blakeslee to

23 write on behalf of the district.

I was the source who called Karen Velie 25 of Cal Coast News and told her that the

```
legislatures had been contacted, and it is my
                                                               we're I going to have this again.
    understanding that she got the letters from the
                                                           2
                                                                      If it was to rain again it would happen
 3
                                                           3
                                                              again, right now. I don't even think they've got
    legislatures that they are public record.
 4
            Something that occurred to me today in
                                                           4
                                                               far enough. If we got another foot and a half of
 5
    your earliest testimony from the electrician, I
                                                           5
                                                               water like we had that day or that night it would
 6
    did listen to the August 15th south county --
                                                           6
                                                               happen again. Everybody on the island, as we call
 7
                                                           7
    south SAND district board meeting, there was an
                                                               it, got sick. I got sick, my son got sick, all
    electrical item on their agenda. They had taken
                                                           8
                                                               the neighbors got sick, I assume there are many
 9
    three bids and they were awarding a contract. One
                                                           9
                                                               names of people that got sick.
10
    of the board members asked the current
                                                          10
                                                                      This isn't like who's going to pay the
11
    superintendent if he had contacted Thoma Electric
                                                          11
                                                              bill, we're dealing with people's lives here, you
    to bid on the current job, and Mr. Bellargio the
                                                               know. People are getting sick from sewage.
13
    current superintendent said that his son worked
                                                          13
                                                               Whatever needs to be done needs to be done and it
14
    for Thoma, and that he did not want there to
                                                          14
                                                               needs to be done quickly.
15
    appear to be a conflict. So I don't know if that
                                                          15
                                                                      And as for the fine, I think you should
16
                                                          16 go back into the neighborhood to address the
    has ever been disclosed, the relationship with
                                                               environmental impact that happened and to take
17
    Mr. Thoma and the Bellargio family.
                                                          17
18
                                                          18
                                                               care of these flood control channels. And a lot
            MR. YOUNG: Thank you for your
19
    comments, Ms. Stacker.
                                                          19
                                                               of the egrets and the herons and the stuff that we
20
            Last speaker for this morning. Sir,
                                                          20 used to enjoy would come back. And we'd also have
21
    can you identity yourself?
                                                          21 a way for the water to get out of the
22
            MR. EHENS: I'm Steve Ehens, I live at
                                                          22 neighborhood. If we can't get it out of the
23
     547 Security Court.
                                                          23
                                                               neighborhood it's going to flood the sanitation
24
            MR. YOUNG: Your name again?
                                                          24
                                                               district and we'll get it again. Thanks for your
                                                          25 time.
25
            MR. EHENS: Steve Ehens, E-h-e-n-s. I
                                                Page 166
                                                                                                          Page 168
    live at 547 Security Court and I was one of those
                                                           1
                                                                       MR. YOUNG: Thank you for your
 2
    homes that (inaudible) top of the sink and the
                                                           2
                                                               comments. Okay. Next we will take our lunch
                                                               break.
 3
    bath tub. I believe my home is on a divert valve
                                                           3
                                                           4
    system, I'm not really sure. It doesn't really
                                                                       (Lunch recess taken.)
 5
                                                           5
    matter, we were overwhelmed with it. It was a
                                                                       MS. MACEDO: I'm going to make a
 6
    foot and a half of water, then right outside my
                                                           6
                                                               statement for the record then I believe we're
7
                                                           7
    door about ten feet night is a sewer manhole which
                                                               being to resume with Ms. Thorme's cross.
 8
                                                           8
    was gushing out there. So I was getting it from
                                                                       MS. THORME: Correct.
                                                           9
9
    both ways.
                                                                       MS. MACEDO: Okay. So Ms. Thorme
10
            I'm not really sure what of the long
                                                          10
                                                               before lunch was questioning Mr. Fischer about
11
    and short of all the legal stuff, what it is, but
                                                          11
                                                               what appeared to be a typographical error, and the
12
    I do know this is a twofold problem. One of them
                                                          12
                                                               prosecution team took a look at the documents over
13 is the sewer plant is not up to snuff, that's the
                                                          13
                                                               lunch and confirmed that there did appear to be a
    bottom line. And another thing is it's
14
                                                          14
                                                               typographical error, and that error appeared in
15
    maintenance, they're not maintaining the control
                                                          15
                                                               both the complaint and the technical reports. And
    channels, the flood channels that are both on the
                                                          16
                                                               rather than attempt to argue that the meaning and
17
    sanitation property, and adjacent to it to get the
                                                          17
                                                               the intent of the violation was clear in our
18
    water out of the area. If the water hadn't been
                                                               briefing we will not do so at this late date. And
19
    there the pumps wouldn't have failed.
                                                          19
                                                               we will forego the $63,000 in reporting violation.
20
                                                          20
            I mean, I've been to every board
                                                               In terms of the penalty that will reduce it by
21
    meeting that I could get away from work to go to,
                                                          21
                                                               $63,000. We would prefer for this not to have
                                                          22
                                                               precedential value, so our arguments regarding
    and they keep telling me it's this person's
                                                          23
23
    problem, the state's problem, this or that, but
                                                               whether the spills have to be reported or whether
```

24

25

Page 167

they are PLSD type spills is not an issue for the

board to consider. And that's the statement.

until you guys correct this flooding issue that we

25 have in the control -- flood control district

24

1	MS. JAHR: I just want to make sure if	1	in the standard operating procedures at that
2	the board members have any questions about what	2	point?
3	will now not be considered violations or what we	3	MS. MACEDO: No, I apologize. You
4	are looking at now.	4	clarified that the person being cross-examined is
5	MR. WOLFF: That's fine.	5	the only one who's going to answer your
6	MR. YOUNG: Okay. So we will resume	6	questions.
7	then with Mr. Fischer.	7	MS. THORME: Well, if he doesn't know
8	MS. MACEDO: Yes.	8	then I would ask that he tell me who on the
9	MR. YOUNG: And Ms. Thorme was	9	prosecution team would know so that I can not have
10	continuing her cross-examination.	10	to ask everybody the same question.
11	MS. THORME: Yes. Thank you.	11	MS. MACEDO: If someone is going to
12	·	12	answer that question later we will answer it, but
13	CROSS-EXAMINATION (resumed)	13	he doesn't know.
14	BY MS. THORME:	14	MR. YOUNG: Well, he needs to answer
15	Q. Mr. Fischer, prior to this enforcement	15	the question.
16	action did the office of enforcement also	16	MS. MACEDO: Yeah, he didn't
17	investigate Mr. Jeff Appleton for allegedly	17	THE WITNESS: I don't know.
18	violating the operator certification	18	BY MS. THORME:
19	regulations?	19	Q. Who would know?
20	A. Yes.	20	A. I don't know.
21	Q. And did the office of enforcement also	21	Q. And did you provide the local residents
22	send a notice of violation to the district for	22	that you interviewed with any information?
23	issues related to their O&M, operation and	23	A. I don't understand your question. What
24	maintenance manual and standard operating	24	kind of information?
25	procedures?	25	Q. Any kind of information about this
	Page 170		Page 172
1	A. Yes.	1	case.
2	Q. And did the district revise its	2	A. Yes.
3	operating and maintenance manual and standard	3	Q. Okay. We've marked this as Exhibit
4	operating procedures in October of 2010?	4	115, and I can provide a copy. All right. Just
5	A. Yes.	5	so for disclosure we redacted the names to who
6	Q. And did the district send those revised	6	these e-mails were given, but is this an e-mail
7	documents to the office of enforcement on	7	that are these both e-mails that you sent?
8	November 1st, 2010?	8	A. Yes, they appear to be.
9	A. I don't remember the date.	9	Q. Okay. So why were you sending let's
10	Q. Can I have Exhibit 14, page 1, please.	l	go to the second page first. Why were you sending
11	That has a date of November 1st, 2010. If you can	11	out the district's objections to people?
12	put up Page 10, please. And the CCs attach or	12	A. I was advised these were public
13	not CCs, the attachments. So does that refresh	13	documents.
14	your recollection as to whether those were sent on	14	Q. Okay. And why do you think that the
15	November 1st, 2010?	15	residents would need those documents and why
16	A. Those weren't sent to me, but I'm	16	couldn't they just be put on the website for
17	familiar with it.	17	everyone to have?
18	Q. Okay. And since you have those	18	A. I don't know.
19	documents on November 1st, 2010 before the spill,	19	Q. Okay. Then on the first page that this
20	did you point out at that time that the district	20	is an announcement about a meeting that you had on
21	was correctly operating and maintaining their	21	Wednesday night at Old Juan's Cantina restaurant.
22	plant?	22	Did you actually hold that meeting?
23	A. I don't know. They were sent to me.	23	A. Yes.
24	Q. Okay. It's a question for the	24	Q. Okay. How many people came to that
25	prosecution team, so did you point out any errors	25	meeting?
	Page 171		Page 173

1	A. Four.	1	nino discharges?
1 2		2	pipe discharges? A. Yes, it is.
	Q. Okay. What was the intent of that	3	•
3	meeting?		Q. To the extent that you've met with
4	A. Provide information.	4	homeowners in the Oceano area and provided them
5	Q. Okay. And did you or anyone on the	5	with public documentation, has it always been your
6	prosecution team provide people with a sample	6	goal to provide them with accurate information?
7	letter to send in?	7	A. Yes, it is.
8	A. No, we did not.	8	Q. And encourage them to attend today and
9	Q. Did you or anyone on the prosecution	9	provide the board with their statements regardless
10	team ever allude to the ability to maybe get part	10	of whether they were in support of the prosecution
11	of the fine for local residents?	11	team or the district?
12	A. Absolutely not.	12	A. That's correct.
13	MS. THORME: No more questions.	13	MS. MACEDO: Nothing further.
14	MS. MACEDO: Redirect?	14	MR. YOUNG: Re-cross?
15	MR. YOUNG: Yes.	15	
16		16	RE-CROSS EXAMINATION
17	REDIRECT EXAMINATION	17	BY MS. THORME:
18	BY MS. MACEDO:	18	Q. I just have one question. If you could
19	Q. Mr. Fischer, early in Ms. Thorme's	19	bring up Exhibit 86 at page just do the first
20	questioning she asked you why the office of	20	page first so they can see what it is. So this is
21	enforcement sometimes doesn't just accept initial	21	administrative civil liability case against
22		22	eastern municipal water district. Did you work on
	estimates that are reported to the regional boards	23	this matter?
23	from dischargers. Do you recall that?	24	
25	A. Yes.	25	A. No, I did not.
23	Q. Okay. Are you aware that the initial	25	Q. Okay. So this was a 2011 sewer spill
	Page 174		Page 176
1	estimate made to the regional board in this case	1	case. If you could turn to the next page, 86-2,
2	was approximately two to three million gallons	2	and pull up paragraph nine for me, please. So is
3	made by Mr. Appleton the former chief plant	1 2	it unusual for the gallonage to change in a sewer
	-	3	
4	operator?	4	spill case? In this case it says that they had
4 5	operator? A. Yes, I am.		
	operator?	4	spill case? In this case it says that they had originally estimated 2.39 million but additional information was provided justifying a reduction to
5	operator? A. Yes, I am.	4 5	spill case? In this case it says that they had originally estimated 2.39 million but additional
5 6	operator? A. Yes, I am. Q. Is that size of a spill enough to	4 5 6	spill case? In this case it says that they had originally estimated 2.39 million but additional information was provided justifying a reduction to
5 6 7	operator? A. Yes, I am. Q. Is that size of a spill enough to trigger investigation by the office of	4 5 6 7	spill case? In this case it says that they had originally estimated 2.39 million but additional information was provided justifying a reduction to 1.6 million. So my question is, is that unusual
5 6 7 8	operator? A. Yes, I am. Q. Is that size of a spill enough to trigger investigation by the office of enforcement?	4 5 6 7 8	spill case? In this case it says that they had originally estimated 2.39 million but additional information was provided justifying a reduction to 1.6 million. So my question is, is that unusual for the gallonage amount to be changed based on
5 6 7 8 9	operator? A. Yes, I am. Q. Is that size of a spill enough to trigger investigation by the office of enforcement? A. Yes.	4 5 6 7 8 9	spill case? In this case it says that they had originally estimated 2.39 million but additional information was provided justifying a reduction to 1.6 million. So my question is, is that unusual for the gallonage amount to be changed based on new information?
5 6 7 8 9	operator? A. Yes, I am. Q. Is that size of a spill enough to trigger investigation by the office of enforcement? A. Yes. Q. And the first entry entered in to CIWQS	4 5 6 7 8 9	spill case? In this case it says that they had originally estimated 2.39 million but additional information was provided justifying a reduction to 1.6 million. So my question is, is that unusual for the gallonage amount to be changed based on new information? A. I don't know.
5 6 7 8 9 10 11	operator? A. Yes, I am. Q. Is that size of a spill enough to trigger investigation by the office of enforcement? A. Yes. Q. And the first entry entered in to CIWQS by the district, was that substantially lower?	4 5 6 7 8 9 10 11	spill case? In this case it says that they had originally estimated 2.39 million but additional information was provided justifying a reduction to 1.6 million. So my question is, is that unusual for the gallonage amount to be changed based on new information? A. I don't know. MS. THORME: Okay. Thank you.
5 6 7 8 9 10 11 12	operator? A. Yes, I am. Q. Is that size of a spill enough to trigger investigation by the office of enforcement? A. Yes. Q. And the first entry entered in to CIWQS by the district, was that substantially lower? A. Yes, it was. Q. And is the disparity between the amount	4 5 6 7 8 9 10 11 12	spill case? In this case it says that they had originally estimated 2.39 million but additional information was provided justifying a reduction to 1.6 million. So my question is, is that unusual for the gallonage amount to be changed based on new information? A. I don't know. MS. THORME: Okay. Thank you. MR. YOUNG: Are we finished with this
5 6 7 8 9 10 11 12	operator? A. Yes, I am. Q. Is that size of a spill enough to trigger investigation by the office of enforcement? A. Yes. Q. And the first entry entered in to CIWQS by the district, was that substantially lower? A. Yes, it was. Q. And is the disparity between the amount initially entered by the district and the amount	4 5 6 7 8 9 10 11 12 13	spill case? In this case it says that they had originally estimated 2.39 million but additional information was provided justifying a reduction to 1.6 million. So my question is, is that unusual for the gallonage amount to be changed based on new information? A. I don't know. MS. THORME: Okay. Thank you. MR. YOUNG: Are we finished with this witness? MS. MACEDO: Yes. You want board
5 6 7 8 9 10 11 12 13 14	operator? A. Yes, I am. Q. Is that size of a spill enough to trigger investigation by the office of enforcement? A. Yes. Q. And the first entry entered in to CIWQS by the district, was that substantially lower? A. Yes, it was. Q. And is the disparity between the amount initially entered by the district and the amount reported by Mr. Appleton, is the disparity between	4 5 6 7 8 9 10 11 12 13	spill case? In this case it says that they had originally estimated 2.39 million but additional information was provided justifying a reduction to 1.6 million. So my question is, is that unusual for the gallonage amount to be changed based on new information? A. I don't know. MS. THORME: Okay. Thank you. MR. YOUNG: Are we finished with this witness? MS. HARRIS: One question, Mr. Fischer, and it goes back to I think the discussion regarding the backup from the plant through the trunk line and ultimately into the other

TRANSCRIPT OF HEARING

		1	
1	MR. HARRIS: I was just wondering are	1	but what about as to any of the hearsay
2	there I think the district was trying to draw a	2	exceptions?
3	line about whether or not they would be	3	MS. MACEDO: Well, the witness appeared
4	responsible for that backup. Are there any cases	4	and was able to be cross-examined, and was
5	recorded currently in CIWQS or any prosecuted that	5	cross-examined.
6	would be similar where a district's trunk lines	6	
7		7	MR. YOUNG: Okay. On his testimony but
	backup into someone else's collection system		not as everything in those documents. So I'm just
8	having a spill and then that primary collector or	8	wondering what we wanted to do was make sure
9	treatment plant itself was responsible?	9	that if you want the documents to come in or
10	MR. FISCHER: I can't speak for the	10	for all purposes
11	enforcement action but certainly for reporting	11	MS. MACEDO: Do you want me to go
12	that has been done that way, yes. I'm familiar	12	through documents one by one?
13	with cases like that.	13	MR. YOUNG: No, I think you need to ask
14	MR. HARRIS: Thank you.	14	him, you know, whether if he deals with the
15	MR. YOUNG: Dr. Wolff?	15	business records exceptions, that's what I'm
16	MR. WOLFF: Thank you. To your	16	thinking needs to be done.
17	knowledge someone with a mechanical engineering	17	MS. THORME: Yeah, there needs to be
18	background can operate a water treatment plant	18	more foundation laid for hearsay that just saying
19	with the proper licensing?	19	that he prepared and put these documents together.
20	MR. FISCHER: I don't know. I don't	20	MR. YOUNG: For the hearsay
21	remember the requirements for that.	21	exception.
22	MR. WOLFF: Thank you.	22	MS. THORME: And they need to be
23	MR. YOUNG: Mr. Jordan?	23	authenticated.
24	MR. JORDON: No.	24	MR. YOUNG: The documents are coming in
25	MR. YOUNG: Mr. Johnston?	25	as hearsay.
	Page 178		Page 180
-	-		
1	MR. JOHNSTON: No.	1	MS. MACEDO: Right. I'm happy to go
2	MR. YOUNG: Okay. Thank you. We'll	2	through every document.
2 3	MR. YOUNG: Okay. Thank you. We'll let this witness go.	2 3	through every document. MR. YOUNG: Well, if you can I think
2 3 4	MR. YOUNG: Okay. Thank you. We'll let this witness go. MS. MACEDO: I have one question if you	2 3 4	through every document. MR. YOUNG: Well, if you can I think you're going to need to if you want to get them
2 3 4 5	MR. YOUNG: Okay. Thank you. We'll let this witness go. MS. MACEDO: I have one question if you don't mind. I believe the evidentiary objections	2 3 4 5	through every document. MR. YOUNG: Well, if you can I think you're going to need to if you want to get them all in, then you can put them up on the screen and
2 3 4 5 6	MR. YOUNG: Okay. Thank you. We'll let this witness go. MS. MACEDO: I have one question if you don't mind. I believe the evidentiary objections that were submitted last week, Exhibit A came in	2 3 4 5 6	through every document. MR. YOUNG: Well, if you can I think you're going to need to if you want to get them all in, then you can put them up on the screen and go through the steps.
2 3 4 5 6 7	MR. YOUNG: Okay. Thank you. We'll let this witness go. MS. MACEDO: I have one question if you don't mind. I believe the evidentiary objections	2 3 4 5	through every document. MR. YOUNG: Well, if you can I think you're going to need to if you want to get them all in, then you can put them up on the screen and go through the steps. MS. MACEDO: I'm happy to do business
2 3 4 5 6	MR. YOUNG: Okay. Thank you. We'll let this witness go. MS. MACEDO: I have one question if you don't mind. I believe the evidentiary objections that were submitted last week, Exhibit A came in	2 3 4 5 6	through every document. MR. YOUNG: Well, if you can I think you're going to need to if you want to get them all in, then you can put them up on the screen and go through the steps.
2 3 4 5 6 7	MR. YOUNG: Okay. Thank you. We'll let this witness go. MS. MACEDO: I have one question if you don't mind. I believe the evidentiary objections that were submitted last week, Exhibit A came in wherein Mr. Fischer provided a declaration, if you could switch to D. So I just want to confirm that, Mr. Fischer, you assisted with the	2 3 4 5 6 7	through every document. MR. YOUNG: Well, if you can I think you're going to need to if you want to get them all in, then you can put them up on the screen and go through the steps. MS. MACEDO: I'm happy to do business
2 3 4 5 6 7 8	MR. YOUNG: Okay. Thank you. We'll let this witness go. MS. MACEDO: I have one question if you don't mind. I believe the evidentiary objections that were submitted last week, Exhibit A came in wherein Mr. Fischer provided a declaration, if you could switch to D. So I just want to confirm	2 3 4 5 6 7 8	through every document. MR. YOUNG: Well, if you can I think you're going to need to if you want to get them all in, then you can put them up on the screen and go through the steps. MS. MACEDO: I'm happy to do business record exception and hit every document. I guess
2 3 4 5 6 7 8	MR. YOUNG: Okay. Thank you. We'll let this witness go. MS. MACEDO: I have one question if you don't mind. I believe the evidentiary objections that were submitted last week, Exhibit A came in wherein Mr. Fischer provided a declaration, if you could switch to D. So I just want to confirm that, Mr. Fischer, you assisted with the	2 3 4 5 6 7 8	through every document. MR. YOUNG: Well, if you can I think you're going to need to if you want to get them all in, then you can put them up on the screen and go through the steps. MS. MACEDO: I'm happy to do business record exception and hit every document. I guess I'd prefer to do that at the end, just to get
2 3 4 5 6 7 8 9	MR. YOUNG: Okay. Thank you. We'll let this witness go. MS. MACEDO: I have one question if you don't mind. I believe the evidentiary objections that were submitted last week, Exhibit A came in wherein Mr. Fischer provided a declaration, if you could switch to D. So I just want to confirm that, Mr. Fischer, you assisted with the preparation of the materials submitted with both	2 3 4 5 6 7 8 9	through every document. MR. YOUNG: Well, if you can I think you're going to need to if you want to get them all in, then you can put them up on the screen and go through the steps. MS. MACEDO: I'm happy to do business record exception and hit every document. I guess I'd prefer to do that at the end, just to get through the main testimony. Do you have a
2 3 4 5 6 7 8 9 10	MR. YOUNG: Okay. Thank you. We'll let this witness go. MS. MACEDO: I have one question if you don't mind. I believe the evidentiary objections that were submitted last week, Exhibit A came in wherein Mr. Fischer provided a declaration, if you could switch to D. So I just want to confirm that, Mr. Fischer, you assisted with the preparation of the materials submitted with both the prosecution team's case in chief and rebuttal	2 3 4 5 6 7 8 9 10	through every document. MR. YOUNG: Well, if you can I think you're going to need to if you want to get them all in, then you can put them up on the screen and go through the steps. MS. MACEDO: I'm happy to do business record exception and hit every document. I guess I'd prefer to do that at the end, just to get through the main testimony. Do you have a preference?
2 3 4 5 6 7 8 9 10 11	MR. YOUNG: Okay. Thank you. We'll let this witness go. MS. MACEDO: I have one question if you don't mind. I believe the evidentiary objections that were submitted last week, Exhibit A came in wherein Mr. Fischer provided a declaration, if you could switch to D. So I just want to confirm that, Mr. Fischer, you assisted with the preparation of the materials submitted with both the prosecution team's case in chief and rebuttal and that your signature appears on the top of this page?	2 3 4 5 6 7 8 9 10 11	through every document. MR. YOUNG: Well, if you can I think you're going to need to if you want to get them all in, then you can put them up on the screen and go through the steps. MS. MACEDO: I'm happy to do business record exception and hit every document. I guess I'd prefer to do that at the end, just to get through the main testimony. Do you have a preference? MR. YOUNG: I don't have a preference
2 3 4 5 6 7 8 9 10 11 12 13	MR. YOUNG: Okay. Thank you. We'll let this witness go. MS. MACEDO: I have one question if you don't mind. I believe the evidentiary objections that were submitted last week, Exhibit A came in wherein Mr. Fischer provided a declaration, if you could switch to D. So I just want to confirm that, Mr. Fischer, you assisted with the preparation of the materials submitted with both the prosecution team's case in chief and rebuttal and that your signature appears on the top of this page? MR. FISCHER: Yes, it does.	2 3 4 5 6 7 8 9 10 11 12 13	through every document. MR. YOUNG: Well, if you can I think you're going to need to if you want to get them all in, then you can put them up on the screen and go through the steps. MS. MACEDO: I'm happy to do business record exception and hit every document. I guess I'd prefer to do that at the end, just to get through the main testimony. Do you have a preference? MR. YOUNG: I don't have a preference one way or the other with that. MS. MACEDO: Okay. Is that all right?
2 3 4 5 6 7 8 9 10 11 12 13 14 15	MR. YOUNG: Okay. Thank you. We'll let this witness go. MS. MACEDO: I have one question if you don't mind. I believe the evidentiary objections that were submitted last week, Exhibit A came in wherein Mr. Fischer provided a declaration, if you could switch to D. So I just want to confirm that, Mr. Fischer, you assisted with the preparation of the materials submitted with both the prosecution team's case in chief and rebuttal and that your signature appears on the top of this page? MR. FISCHER: Yes, it does. MS. MACEDO: Okay. And we prepared	2 3 4 5 6 7 8 9 10 11 12 13 14	through every document. MR. YOUNG: Well, if you can I think you're going to need to if you want to get them all in, then you can put them up on the screen and go through the steps. MS. MACEDO: I'm happy to do business record exception and hit every document. I guess I'd prefer to do that at the end, just to get through the main testimony. Do you have a preference? MR. YOUNG: I don't have a preference one way or the other with that. MS. MACEDO: Okay. Is that all right? MR. YOUNG: That's all right.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	MR. YOUNG: Okay. Thank you. We'll let this witness go. MS. MACEDO: I have one question if you don't mind. I believe the evidentiary objections that were submitted last week, Exhibit A came in wherein Mr. Fischer provided a declaration, if you could switch to D. So I just want to confirm that, Mr. Fischer, you assisted with the preparation of the materials submitted with both the prosecution team's case in chief and rebuttal and that your signature appears on the top of this page? MR. FISCHER: Yes, it does. MS. MACEDO: Okay. And we prepared what was I believe exhibits 1 through 24 and 99	2 3 4 5 6 7 8 9 10 11 12 13 14 15	through every document. MR. YOUNG: Well, if you can I think you're going to need to if you want to get them all in, then you can put them up on the screen and go through the steps. MS. TRANSCRIPT OF HEARING
                                                        1
    So there's a little background on me. This is the
    first time many of you have seen me here, but I've
                                                        2
                                                        3
    worked her for a while, so thank you for
    entertaining me here today.
                                                        4
 5
                                                        5
           I am doing my presentation of the
 6
    penalty calculations presented here today. I'm
                                                        6
                                                        7
7
    taking a bit of a departure than the typical
    PowerPoint presentation efforts and instead I'm
                                                       8
                                                       9
9
    going to use an Excel spreadsheet so we can walk
    through exactly how the penalty was calculated
                                                       10
                                                       11
11
    that you're considering today.
12
            So while our region has issued many
                                                       12
13
    ACLs over the past years the proposed penalty
                                                       13
14
    presented for your consideration today is based on
                                                       14
15
    the relatively recent enforcement policy penalty
                                                       15
16
                                                       16
    calculation methodology adopted in May 2010.
17
            The 2010 policy associated methodology
                                                       17
18 were created to ensure a consistent, fair method
                                                       18
19 of calculating penalties across various regions
                                                       19
                                                       20
```

20 for various types of violations, and in consideration of water code section 13385(b).

This discussion of the methodology 23 we'll walk through in this spreadsheet will probably sound familiar and ring some bells for you. As section manager Harvey Packard has

what has already been put into evidence.
```

MS. JAHR: Is that acceptable to you?

MS. THORME: Yes.

MR. YOUNG: Let us know what exhibit number you're looking at and what page.

MS. MACEDO: Well, we're hoping you'd follow along on the screen. That's the best we can do.

MR. YOUNG: Okay. This is a part of the technical report?

MS. MACEDO: It's in the technical report which is Exhibit 1 to the prosecution team's submission on July 27th.

MR. YOUNG: Okav.

MS. DISIMONE: Bear with me one second while I make that slightly larger. So with that, the penalty policy calculation methodology has ten steps to determine the final liability including consideration of type of discharge, impact to beneficial use, culpability, ability to pay and 21 various other factors.

The prosecution team and the district 23 agree on a few of the steps but definitely not all of the steps or the factors that go into the determination as part of this methodology. So

Page 184

previously briefed the board on this methodology earlier this year.

MS. THORME: And Mr. Chairman, if I could interject, if she's going to put things up on the screen we need to print them as she talks about them so they can go in the record. Because if it's just going by on the screen it won't get into the record.

MR. YOUNG: I take it we don't have paper copies of this already generated?

MS. MACEDO: No, it's going to be created as she talks. And I'm happy to print it as soon as it's a completed document and then provide it for everyone, but it's being created so people just don't look at it and not listen to her as she presents.

MS. JAHR: The final product, however, is already in its attached in the technical 18 report, right?

MS. MACEDO: That's right.

MS. JAHR: To the minus 63-?

MS. MACEDO: Minus 63-, that's right. MS. THORME: My understanding she was

24 going to move things around potentially.

> MS. DISIMONE: It will look the same as Page 183

today I'll walk through the steps, the factors, 2 where we had agreement and where we have 3 disagreement. As a general -- I'm going to ask a 4 guestion. Is this large enough for the board 5 members to see? 6

MR. YOUNG: We can see.

MS. DISIMONE: And the district to be able to see on the board clearly.

9 MR. YOUNG: Yes. 10

MS. THORME: Yes. Okay.

11 MS. DISIMONE: So with that you can 12 tell there's ten factors -- ten steps, excuse me. 13 And what I'm going to do is scroll up to the top, 14 start with step on.

Step one is called a potential harm factor. And it's an evaluation of potential harm to beneficial uses considering that harm that may result from exposure to the discharge. Within that step one we're going to actually have three -- four factors, if you will, up here in the 21 top right-hand corner in green of the spreadsheet.

22 The four factors are potential harm for 23 discharge violations, characteristics of the discharge, susceptibility of cleanup or abatement, 24 25 and deviations from requirement.

25

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

So let's walk through the first factor. Potential harm for discharge violations. As we look at this there is a pull-down scale that comes with this indicating that there's an availability of a score between zero and five, where zero is considered negligible and five is considered major, and that describes the threat to beneficial uses; in other words, negligible threat or major threat.

5

6

7

8

9

10

17

19

23

24

9

10

12

13

14

15

17

18

19

20

21

22

23

24

25

Of note here, if you refer back to the 11 2010 enforcement policy, I do believe all the board members have that policy for consideration during their weighing of the evidence presented 14 here. Scores zero through three do not include 15 restrictions on beneficial use as a result of 16 discharge, whereas scores four and five are both explicitly stated that they acknowledge the discharge caused restrictions on beneficial uses. 18

The difference being between scores 20 four and five is with regards to the duration of the restrictions on beneficial use. A score of four would be less than five days and a score of five would be greater than five days.

The prosecution team selected a score 25 of five, a major threat to beneficial uses for

and select five.

The district has proposed or has argued in their briefs and evidence that the score of two, in other words, below moderate, is appropriate. You can refer to the enforcement policy for a description of below moderate, but the description includes where harm is minor. A score this low fails to acknowledge the county imposed beach restrictions on nearly one dozen confirmed residential sewer spills and the reported acute potentially chronic illnesses reported after exposure to the spill.

Looking at the next factor which 14 involves the physical, chemical, biological 15 characteristics of the discharge; in other words, 16 what exactly was spilled, what are those characteristics. In this case we're talking about untreated sewage combined with storm water flows. So in this particular drop-down the score ranges 20 from zero to four, similar to the other, zero being negligible risk, four going all the way up to a significant risk.

The prosecution team has used a score of three, above moderate, to describe discharge material. This is consistent with other wet

Page 186

Page 188

this particular action and violation. This is 2 acknowledging that sewage flowed into creeks --3 untreated sewage flowed into creeks, lagoons, Pacific Ocean. Sewage flowed into private 5 residences directly exposing residents to 6 wastewater. Reports of illnesses have been 7 presented in the prosecution team's evidence, both 8 acute and chronic exposure effects.

Beneficial uses of the water that were impacted by the spill included potential source of drinking water, aquatic habitat, recreational uses both direction and nondirect or contact and noncontact. But additionally the beach was closed for multiple days as a result of the spill. While the prosecution team recognizes that beach conditions were also affected by high surf and flooding at the same time as the spill occurred, a sewage spill of this magnitude without the surf and flooding would have still resulted in beach restrictions and closures.

In this particular case those beach restrictions were in place longer than five days. The prosecution team believes that that evidence supports the selection of the threat score of five. So I'm going to fill that in here for you

Page 187

1 weather SSOs that were researched by the 2 prosecution team. And the district, however, 3 proposes to use two which will be a moderate 4 description. We don't feel this is appropriate 5 and a failure to acknowledge the dangers inherent 6 in untreated sewage disclosures. Pathogens, 7 bacteria, viruses, metal, excessive nutrients and 8 organic floating, floating materials, personal 9 hygiene products, any number of things that people 10 put into their sewer system, both industrially, 11 personally, you just don't know.

So I would like to note that the 13 enforcement policy is written and the scores given encompasses a wide range of types of discharges or spills that could be contained. So the scale of zero to four can even include things like chlorinated drinking water all the way up to industrial waste. A score of three, again, just to reiterate, is consistent with other ACLs within the state for wet weather sewage spills.

Factor three is fairly straightforward and is called acceptability of cleanup or abatement. This one we have an agreement on. Both the district and prosecution team agreed on less than 50 percent of the spilled materials can

11

17

18

19

22

24

10

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

be recovered for a cleanup or abatement action and therefore we choose that. And that actually 3 assigned a score of one. It's not clear on the spreadsheet, but that particular assignment generates a score of one. If you were to make a determination that greater than 50 percent could have been cleaned up the score would be zero.

6

7

8

9

11

12

13

14

15

16

17

23

24

10

I'm going to now take those three factors that I've just described and add them together, five, three, one is nine, but I can still do that math. So we're going to take that nine and go to table one of the 2010 enforcement policy which I have recreated here just for demonstration purposes. This is the same table as the one that's presented in the 2010 enforcement policy.

The potential harm scores, the sum that 18 I just talked about of those three factors in which case ours is nine, I would get out a laser. 20 It's nine right there. And in order to read the 21 final thing we need to for step one we're going to 22 have to make a determination that is on the Y axis for deviation from requirement.

So in this particular case we're going 25 to have to decide whether the deviation from

1 Furthermore, it would be difficult to 2 argue that the discharger had an intent to comply 3 when there were no electrical weaknesses within the wastewater treatment plant wiring and grading, 5 valve operations that were unaddressed, especially 6 with regards to the electrical as was seen in 7 2004, major budget items, making decisions to save 8 money and therefore jeopardizing the ability to 9 comply with the requirement in a reasonable manner 10 does not meet the minor definition.

Using moderate as our selected 12 deviation we can come back to the main table 13 select moderate from the pull-down menu, and then 14 use this newfangled button that says determine 15 harm and per gallon per day factors for violation 16 one. When I press that button magic happens and step one has the total score of nine that we discussed, and it also populates the two green squares within step two's per gallon factor and 20 per day factor, with a per gallon factor per day 21 of .5 each.

So for clarification, if you were to 23 compare with what the district is proposing you would instead go to table one and use a total score of potential harm of five and choose minor,

Page 190

Page 192

requirement fits minor, moderate or major as the 2 correct description. What does the deviation from requirement reflect? It's the extent to which the 4 violation deviates from the specific requirement; in other words, how far away from compliance with 6 the requirement are we. And in this case we're 7 talking about the deviation from the prohibition 8 of spilling or discharging of untreated sewage at 9 a collection system.

So minor would be described as the 11 general intent to comply, the effectiveness of the 12 requirement generally remains intact. Major would 13 mean the requirement was rendered ineffective. 14 The prosecution team fits somewhere in between the 15 two descriptions. Moderate is an appropriate 16 description, the requirement is partially 17 achieved. So while not all the sewage from that 18 day spilled and a collection system didn't 19 completely fail, they were effective partially and 20 therefore partial achievement was required. 21

We do not feel that it meets minor 22 intent. This is a fairly major gallon spill, I 23 think it would be inappropriate to term this a 24 minor spill where effectiveness generally was 25 intact.

1 moderate or major. At this point I can't give you 2 a clear answer what the per gallon and per day 3 factor would be that the district has proposed 4

because they've simultaneously argued it's 5 somewhere between minor or moderate. And it's 6 unclear to me from the evidence that's been 7 presented, which would be the argument they say

applies. So with that we have a couple lines of 9 our table filled, we're done with step one. Let's

move on to step two.

11 Step two is the assessment for the 12 discharge violation. Under water code section 13 13385 where deemed appropriate such as for large 14 scale spills both per gallon and per day

assessments may be considered. We feel this is 15 16 appropriate here and have included such in our

17 penalty calculations. Under the water code section 13385(c) the maximum per gallon penalty

19 allowed under the water code is \$10 per gallon;

20 however, in consideration of large spills the 21 water board can consider a maximum of \$2 per

22 gallon under their discretion. The prosecution team is using that recommendation and using \$2 per 23

24 gallon as the adjusted max per gallon.

And with regards to the statutory

Page 193

Page 191

25

11

13

14

21

22

23

24

25

1

2

3

4

5

6

14

15

16

24

SEPTEMBER 7, 2012

```
maximum per day on a per day factor, according to
 2
    section 13 again, according to water code section
 3
    13385(c) it's $10,000 per day. I'll fill that in.
    And now we have a couple of remaining factors to
    fill in, the gallons and the days. I'll start
 6
    with the easier discussion item. The spill
 7
    occurred on December 19th and 20th, 2010, so I'm
    going to put two for the number of days. And the
 9
    gallons -- the per gallon penalty amount applied
    after the first thousand gallons spilled, so in
11
    this case the prosecution team has estimated the
    total gallons spilled as 1,139,825 gallons. And
    I'm going to subtract off a thousand gallons to be
14
    consistent with the regulation policy, so it's
15
    1,138,825 gallons.
16
```

So filling in step two with those last bits of information has completed step two, and we can move on to step three, which would be per day assessments for nondischarged violation. 20 Previously in the original consideration that you 21 had in front of you at the start of the day we did 22 include the reporting violations, or I should say non-reporting violations. And as we've just testified to we're going to take those off the

Page 194

table due to typographical error, so normally this

would be filled out, I'm going to leave it blank.

I guess it's maybe a question of consistency. May I leave this blank? For the purposes of my

demonstration can we agree to leave it off? 5

MR. YOUNG: Sure. MS. JAHR: Yes.

17

18

19

23

3

6

7

8

9

10

11

12

13

15

17

19

20

21

24

MS. DISIMONE: Okay. I will do that. You will all be pleased to know that will save about 15 minutes. And since these are now zeros and it generates an initial -- the spreadsheet generates an initial amount of the APL in the total of \$1,148,825.

We now move on to step four which is 14 called additional factors. These are adjustment factors that the board can consider, and essentially they describe the violator's conduct and can make adjustments up or down to the final 18 ACL amount based on the discharger's conduct, or the violator's conduct.

The thing to remember with these remaining factors as we discuss them is that these are sliding scales. Anything great -- a factor greater than 1.0 will result in an increase to the final ACL amount. Any factor less than one will 25 be a multiplier and will decrease the final ACL

Page 195

amount.

2 The first factor we're going to look at 3 under step four is culpability, and culpability in 4 this case, higher liabilities should result from 5 intentional or negligent violations and for 6 accidental or non-negligent violations. The test 7 for this under the policy guide is what a reasonable and prudent person would have done or 9 not done under similar circumstances.

In this particular case we're not just talking about an operator working at the wastewater treatment plant, but rather the district as a whole and how their actions play a part in the reasonable and prudent test.

15 So in evaluating the adjustment 16 multiplier given in the policy is anywhere between 17 .5 and 1.5. The prosecution team in this case has selected a 1.1. So again, for clarity, the 18 19 maximum we could have assessed was 1.5, we've 20 chosen just over a neutral factor.

We do feel that the district has culpability in their actions and that it was not reasonable and prudent to defer the major budget items for electrical repairs since 2004, that the standard operating procedures were deficient in

Page 196

that to close all 12-inch valves and then subsequently that 12-inch valve created problems during the spill. Standard operating procedures were revised after the spill as a result.

It's a flood prone area, there's known grade issues that weren't addressed sufficiently 7 to prevent some of the intrusion of water, so while there was a flood and we are acknowledging that that does contribute to the problems 10 experienced, it does not release the district from 11 the problems they encountered with regards to 12 electrical repairs which could have in large part 13 prevented the problems and the eventual failure.

With that I'm going to move on to cleanup and cooperation. This is describing the extent to which the discharger voluntarily 17 cooperated in returning to compliance and correcting environmental damage. This factor can 18 19 go, according to policy, and we're using .75 to 20 1.5. In this particular case the prosecution team 21 is recommending a one, a neutral. We don't feel 22 they went to any superior or less than superior. 23 A one is essentially an average rating. We feel they behaved according to what regulations dictated, and we're not discounting for any issues Page 197

50 (Pages 194 to 197)

10

11

12

13

14

15

16

17

21

22

24

The third factor is listed as a history of violations. It's important to note that you cannot go lower than one, a 1.0 factor on this, but if there was a history of repeated violations a minimum multiplier would be 1.1. In this particular case we're not finding that there is a history of repeated violations so we're going to consider increasing the amount but we're going to leave that also at a factor of one.

10 11 I think I'd like to just touch on one 12 thing. It wasn't in my notes but I would like to address it. I'm very sympathetic to the public 13 input that I heard with regards to the flood 15 causing the problems here. The electrical 16 problems and the way that these issues happened 17 and the pumps failed and the shorts that were 18 experienced didn't require a flood of this 19 magnitude. The district had problems prior to 20 this flood with their electrical system. That's 21 clear in the language that was brought before you 22 in evidence describing the major budget items for electrical repairs, that there were need to 24 replace with waterproof wiring, several instances 25 of failure causing loss of power previously, and

evidence that they've examined the district's 2 financial records and concluded that the district has the ability to pay. With that it now switches to the district, and the district must provide an 5 affirmative defense; in other words, clearly 6 demonstrate an inability to pay in order for the 7 board to adjust the recommended penalty under step

With regards to ability to pay -- take 10 a moment here. The ability to pay today has 11 focused thus far on issues with regards to a \$5 million, roughly, cash reserves or liquid 13 accounts and whether or not there could be a 14 theory that that money could be saved for -- that 15 that money could be saved for -- whether that 16 money could have been saved for larger projects. 17 future projects, but the district was anticipating 18 that the wastewater treatment plant or otherwise. 19 And I heard the district say that the 1.4 million 20 is beyond their ability to pay.

I find this curious because in my job 22 at the water board as dealing with the permit compliance for the wastewater treatment plant for the district their wastewater treatment plant

25 permit MPDS permit No. R32009-0046 fax sheet F,

Page 200

that seals had not been installed, they had deteriorated wiring.

It wasn't a flood that was needed, it was merely water in contact with wires which could result from rainfall events, wash-down water, delivery trucks, dust control water. This could have been from a number of different sources, not iust a flood.

So while I'm sympathetic the flood was a compounding issue with regards to complexity of what was experienced on that day by the district, it did not need to be a flood of that size to cause those problems. And that is at the heart of the prosecution team's presentation and considerations. And I think a 1.1 culpability score is quite conservative given those factors.

Moving on to step five, that is simply 18 a new sum total after factoring in step four multipliers. And so with the 1.1 culpability 20 factor we did increase by 10 percent the base liability amount to \$1,263,707.50.

Step six, we've heard a lot about this 23 step earlier, or we started to, and that was the ability to pay and continue in business. So at 25 the start the prosecution team has presented

Page 199

planned changes. I'd like to describe this. It 1 2 says, "Addition of a second secondary clarifier 3 and an aeration tank" -- I left off the dimensions

from the description for ease -- "is planned during the time frame of this permit. These

6 additions to the secondary treatment process will

7 improve the facility's ability to handle

8 anticipated increased strength BOD and TSS of 9 wastewater due to water conservation efforts of

10 the member agencies. These changes will also 11 provide redundancy in the secondary equivalent

12 biological treatment process in the event of an 13 emergency shutdown, mechanical failure or routine 14 maintenance."

15 MS. THORME: Can we get a page number 16 of that?

17 MS. DISIMONE: That's F-6. 18 MS. THORME: Is that in --19 MS. DISIMONE: In the order.

20 MS. THORME: In the order. What 21 exhibit was that?

22 MS. JAHR: I believe it's Exhibit 28. 23 MS. DISIMONE: It's order R32009. I

24 don't have the evidence list in front of me. 25 MS. JAHR: 0046, Exhibit 28.

6

7

8

16

17

24

3 The plant does needs these improvements. These are -- this was highlighted 4 5 in a recent inspection that I performed at the 6 plant, I'd say about roughly four months ago. 7 Currently the secondary treatment process has no redundancy, it's a single fixed film reactor. And 9 this need has been identified by the district many 10 years past, and I'll pull from also Exhibit 6, 11 Page 2765 is the description of a major budget 12 item for fiscal budget year 2010 to 2011 is what I have on the screen currently. Scroll up to the top. This talks about long-range planned 15 expansion. The total project budget is 16 \$8,500,000. This is actually done from previous budget years but had it at \$12 million. And those 18 facts and figures can now be found within that 19

same exhibit, just on previous pages. As it says in this exhibit and on this 21 page the district -- in this paragraph here, I'm 22 sorry. I can enlarge it. It says here, also as part of the SRF process, in other words, the state 24 revolving fund process, staff, meaning the district, is also working on a rate study to

1 What I don't read on here, getting to 2 previous comments I've heard during today, is that 3 the district isn't mentioning a separate fund set aside in pre-planning of this. What I see is we 5 think that the rates currently might be adequate 6 to qualify for an SRF loan. I worked previously 7 for a city in developing SRF loan applications and budgeting for major improvement projects at a 9 wastewater treatment plant, and if I had had 10 \$5 million planned for this major budget item I 11 believe I would have mentioned it.

So going back to ability to pay. We're 13 entering a factor of one. We don't feel that this needs to be decreased, we believe that the district has the ability to pay. We do not 16 believe that the district has met the affirmative 17 defense to show an inability to pay.

Step seven is a mouthful that says other factors as justice may require staff costs. 19 20 So if the water board believes that the amount 21 determined using the above factors is 22 inappropriate the amount may be adjusted under the provision for other factors as justice may require, but only if express findings are made to 25 justify this. Staff costs are included within

Page 202

Page 204

determine if current rates are sufficient to qualify for the loan, getting information from the member agencies has proved cumbersome, and it goes on to say that they're working on a rate study.

As a staff member of the water board interested in looking at compliance with the permit, and in regards to this particular penalty and why I feel it's important as a message to the district about the importance and urgency of 10 needed projects, not just electrical projects but 11 also things likely redundancy within your 12 treatment processes, especially for secondary 13 treatment. According to the permit this work was 14 going to be completed during that permit -- this 15 current permit cycle. This permit expires in two years.

If the rate study isn't competed or out 18 according to this document, I don't have final 19 engineering drawings, I don't have a project out 20 for bid, I don't have construction started, and I 21 only have two years of this permit left. This to 22 me is failing to adjust the urgency of previously identified needs. The district needs to hear that message, and I think the ACL is a method of doing 25 **that.**

this amount for \$75,000 as -- I'm sorry, for \$75,000, and so those are included in there.

MR. YOUNG: Which is 25,000 more than what's in our exhibit, right? And that's because of --

MS. MACEDO: Yes. At the time of the complaint staff costs were 50,000, at the time of the initial submission of evidentiary brief they were 63-, and at the time of the rebuttal brief they were 75-. And we estimated that we would accept 75- unless you the board wanted specific information and we would calculate an exact amount, but we would be willing to accept a \$75,000 award.

MR. YOUNG: Okay.

MS. DISIMONE: And so moving on to step eight, economic benefit has also been discussed previously. We heard testimony from Dr. Gerry Horner that the economic benefit district derived from delaying major budget items for electrical repairs at the plant was \$177,209. Wonderfully entering that number in gets us almost to the end of our presentation of the ten steps.

Step nine being the minimum and maximum liability amounts. These are straightforward from

Page 205

```
the enforcement policy and water code. The
                                                               sense this urgency. With two years left in their
2
    minimum ACL has to be 10 percent over the economic
                                                           2
                                                               permit and the expectation that that work was
                                                           3
    benefit derived, so in this case the formula
                                                               going to be done before then, I fear that we're on
    entered here is 10 percent greater than the
                                                               a course to not meet that.
                                                           5
 5
    $177,209 yielding a minimum liability amount of
                                                                       The district is expected -- the recent
 6
    $194,930. So the maximum liability amount, the
                                                           6
                                                              inspections also verified that there's an unlined
7
                                                           7
    next part of step nine, and that is calculated as
                                                               sludge drying bed and other things which were also
    $10 per gallon exceeding the first one thousand
                                                               part of their major budget improvement. The
    gallon spill plus $10,000 per day. So in this
                                                           9
                                                               district has work to do and I hope they feel the
10 case it is as if the per day factor of two days --
                                                          10
                                                               urgency to do that.
11 or excuse me, it's as if the per day factor and
                                                          11
                                                                       MR. WOLFF: Can you repeat the last
12 the per gallon factor were not applied and instead
                                                          12
                                                               sentence, please? I didn't understand that.
13 multiplied by the maximum statutory limit for each
                                                          13
                                                                       MS. DISIMONE: Sure. I would hope
14 of those, $10 per gallon and $10,000 per day.
                                                          14
                                                               that -- the district has a lot of remaining work
15
           Step ten is simply a final tally of
                                                          15
                                                               to be done with the plant expansion to include a
16 what our final liability amount would be after the
                                                          16
                                                               redundancy within their secondary treatment
    multipliers and factors considered and described
                                                          17
                                                               process as well as other major budget items, such
18 in my previous part of the presentation, and the
                                                          18
                                                               as unlined sludge drying beds which were a part of
19 total final liability amount in step 10 would be
                                                          19
                                                               the discussion during my recent inspection there.
                                                          20
20 $1,338,707.50. For clarification and just to
                                                                       And I hope that the district is able to
21 reiterate, that amount takes out the 63,000 that
                                                          21
                                                              feel the sense of urgency to perform that work
22 was previously on the table at the beginning of
                                                          22
                                                               given that their two years -- they only have two
23 the day for consideration. So by showing a live
                                                          23
                                                               years left in their current permit cycle and that
24 demonstration of this, this would be the new
                                                          24
                                                               redundancy within a secondary treatment was
25 amount for consideration based on the prosecution
                                                               expected before the end of this permit cycle.
                                                Page 206
                                                                                                          Page 208
    team's recommendation, that includes
                                                           1
                                                                      The district may not appear to
                                                           2
    acknowledgement of removing that 63,000
                                                              recognize that urgency and I would not like to be
    non-discharge violation for the failure to
 3
                                                           3
                                                              back in front of you on an upset of failure to
 4
                                                           4
                                                              comply because a secondary treatment system had a
    report.
 5
            MS. THORME: So can we have this
                                                           5
                                                              problem and they failed to recognize that urgency.
     printed and marked as Exhibit 116 then?
                                                           6
                                                              So with that said I am open to questions.
7
                                                           7
                                                                      MS. MACEDO: I'll save mine for
            MR. YOUNG: Sure.
8
                                                           8
            MS. DISIMONE: Absolutely.
                                                              redirect.
9
                                                           9
            MS. MACEDO: Yes.
                                                                      MR. YOUNG: Okay. Cross.
10
            MS. DISIMONE: I can do that. I just
                                                          10
11
    will probably coordinate getting it off the laptop
                                                          11
                                                                          CROSS-EXAMINATION
12
    and onto the printer when I'm done with being
                                                          12
                                                              BY MS. THORME:
13
    crossed.
                                                          13
                                                                 O. Ms. DiSimone, can I have you stand at
14
                                                          14
                                                              the podium so I can actually see you?
            In summary, the penalty presented here
15
    today consistent with the 2010 water quality
                                                          15
                                                                 A. Yes.
16
    enforcement policy, water code represents a
                                                          16
                                                                 Q. So you were not the district's water
    conservative and fair assessment of the factors
                                                              board contact at the time of the 2010 spill; is
17
                                                          17
18
    affecting the final penalty amount and the
                                                          18
                                                              that correct?
19
    conditions of the spill. We are hopeful that the
                                                          19
                                                                 A. No.
20
                                                          20
    penalties will emphasize the importance and
                                                                 Q. Was it Matt Keeling?
21 urgency of promptly performing maintenance and
                                                          21
                                                                  A. Yes. Okay. Wait. Was that correct?
    identifying necessary improvements to meet permit
                                                          22 Yes, it was correct.
    conditions. I talked about the challenges the
                                                                 Q. Was Matt Keeling the person who was
23
                                                          23
```

24

25

Page 207

their contact at that time?

A. Yes, I believe so.

district is facing in the near future with regards

to plant expansion, and it's important that they

24

1	Q. Okay. And did you have any involvement	1	bypass?
2	in drafting the prosecution team's Exhibit 1	2	 A. The wastewater treatment plant permit
3	technical report?	3	does.
4	A. No, ma'am.	4	Q. Okay. And isn't the prosecution team
5	Q. Okay. And did you review any of the	5	alleging that the cause of the spill occurred at
6	staff people's inspection reports prior to the	6	the wastewater treatment plant?
7	2010 event?	7	A. That is correct, that the influent pump
8	A. Can you repeat that?	8	failure caused the backup in the collection
9	Q. Yes. Did you review any of the	9	system.
10	regional board's inspection reports of the plant,	10	Q. And can you provide me of any examples
11	prior that were in time prior to the 2010	11	where the defense of either upset or bypass have
12	event?	12	been allowed by this regional board?
13		13	A. I cannot.
	A. I'm a little hesitant what time frame	14	
14	you're asking me. So have I ever reviewed any of		Q. And do you know why the permit contains
15	the inspection reports from	15	those defenses?
16	Q. So say there were inspections done	16	A. Because the MPDS allows that. MPDS
17	annually of the plant, is that about right? How	17	permit allows that.
18	often is the plant inspected?	18	Q. Do the federal regulations not require
19	A. I would defer to the record on that. I	19	that permit have upset and bypass defenses that
20	am not the case worker since	20	include language that is copied from the
21	Q. Okay. So my question is, assuming it's	21	regulations into the permit?
22	inspected annually, did you go back when you were	22	MS. MACEDO: Objection. Calls for a
23	preparing the penalty factors and look at the	23	legal conclusion.
24	inspection reports for 2008, 2009, 2010?	24	You can answer if you know.
25	A. Yes, I reviewed various parts of the	25	MS. DISIMONE: I don't see much
	Page 210		Page 212
	1 age 210		1 agc 212
1	record, including inspection reports.	1	difference between my answer and what you just
2	Q. Okay. And did any of those inspection	2	said.
3	reports indicate that this 2010 spill was	3	BY MS. THORME:
4	likely?	4	Q. Are you aware that the federal
5	A. I don't recall that.	5	regulations also included upset and bypass
6	Q. What is your understanding of	6	defenses?
7	"upset"?	7	A. Yes.
8	A. In what context?	8	Q. Okay. And do you think wastewater
9	Q. In the permit requirement context.	9	treatment facilities can operate perfectly
10	A. In the permit context, an upset event,	10	100 percent of the time?
11	as I believe you're describing, would be with	11	A. No.
12		12	
13	regards to an event which is related to the	13	Q. So you said that the district didn't
	discharge of violating technologically based	14	need a flood to cause the spill. If that's the
14	effluent limits.	1	case, how come it never happened for 25 years?
15	Q. Okay. And does the permit	15	MS. MACEDO: Objection. Calls for
16	district's permit have specific provisions	16	speculation.
17	allowing the defense of upset?	17	You can answer.
18	A. Which permit would you	18	MS. DISIMONE: I don't know the 25 year
19	Q. The MPDS permit.	19	history of what went on, what was recorded. I
20	A. Can you repeat the question?	20	don't believe everything that happens at a
21	Q. Does that permit have specific	21	wastewater treatment plant gets recorded.
22	provisions allowing the defense of upset?	22	BY MS. THORME:
23	A. Yes. Wastewater treatment plant permit	23	Q. So you're alleging there were spills
24	does.	24	that weren't reported?
25	Q. Does it also have the defense of	25	A. That's not what I'm alleging.
	Page 211		Page 213

Q. Okay. Can't machinery even if well identified that the district has a need for doing 2 maintained have occasional times of malfunction? 2 additional major budget item projects; is that 3 3 correct? A. Sure. 4 Q. What previous regulatory actions have 4 A. Yes. 5 been taken against the district? 5 Q. And would it be better for the district 6 6 A. I'd have to refer to the project to use its money for projects or penalties? 7 7 A. I'm -- I think that's a bit of an odd records. Off the top of my head I can't specifically answer that. 8 question, and I'm not guite sure how to answer 9 Q. Okay. So you're not aware of any 9 effluent violations and mandatory minimum 10 Q. Okay. All right. So in the recovery 11 11 penalties? factor, was the district given any credit for the 12 A. Yes, I am aware of effluent violations. 12 storage and continued treatment of effluent coming 13 And with regards to the specifics of those, I'm 13 into the plant all day? 14 fairly -- I prefer to give a full, complete answer 14 A. Can you repeat the question? 15 without the project records. I don't want to 1.5 Q. This is -- every time I have to repeat 16 speculate. 16 it it's cutting into my time. 17 17 Q. Okay. And are you aware that from the A. I believe that it was -- that you're 18 time 2000 when the mandatory minimum penalty asking how was the discharge volume calculated? 18 statute went into effect and now that the district 19 Q. No, I'm not. 20 20 has only been penalized \$6,000 in mandatory MS. MACEDO: Are you talking about the 21 minimum penalties for effluent limit violations? 21 susceptibility to clean up the --22 22 A. What was the question? BY MS. THORME: 23 Q. Are you aware that since 2000 to now, 23 Q. This is the recovery step that you had 24 just went through. There were certain steps and that the district has only been given mandatory 25 minimum penalties for \$6,000 worth of effluent one of them is the recovery step. Page 214 Page 216 violations? 1 There is no recovery. 2 2 A. I would have to verify that. MS. MACEDO: Are you talking about 3 Q. All right. Can you pull up 3 susceptibility to clean up and abatement? Exhibit 95-2, please? If you could pull up the 4 BY MS. THORME: 5 yellow part. Are you aware of what this document 5 Q. Right. Cleanup and cooperation. 6 is? 6 A. Step four. 7 7 A. It looks like a query of CIWQS's MS. JAHR: Yes. She's talking about 8 8 database, but I did not develop this, so I am not step four. 9 9 entirely sure. BY MS. THORME: 10 Q. So if this was a CIWQS download, when 10 Q. Yes. I was calling it the wrong thing. 11 you were asking for all the discharges and all the 11 It was one of the adjustment factors. And so my penalties and it's \$6,000, would you question question was, were they given credit for the 13 **that?** 13 storage and continued treatment during the day? 14 Because you're looking at whether 50 percent was A. I didn't generate this, so I'm 15 uncomfortable verifying whether or not that recovered or not, so what do you use as the basis 15 16 information is correct. 16 of that? 17 17 Q. Okay. And can you pull up Exhibit 101 MS. MACEDO: I'm sorry. You're talking 18 for me, please? So did the prosecution team 18 about the susceptibility and cleanup factor, which prepare this Exhibit 101? 19 is in step one? 20 20 A. Yes. MS. JAHR: There's two steps involving 21 Q. Okay. And what did you do to prepare 21 cleanup and --22 **this?** 22 MS. DISIMONE: You're talking about 23 23 A. I would defer to Matt, as he was the cooperation and cleanup in step four? 24 MS. JAHR: No, I think she just said 24 primary generator of this exhibit. 25 25 **50** percent, which is step one. Q. Okay. So you stated that you had Page 215 Page 217

	TRANSCRIPT OF HEARING	SEPTEMBER 7, 2012
1	DVMC THORMS	1
1	BY MS. THORME:	$\frac{1}{2}$ eventually went out to the ocean was sewage?
2	Q. I'm sorry. So less than 50 percent of	2 A. I don't have that number.
3	the discharge is susceptible to cleanup or	3 Q. Okay. And are the staff costs that are
4	abatement. So the question is, did you take into	4 in this table, are those discretionary?
5	account that had they not been able to keep	5 A. Could you clarify what you mean by
6	treating and storing, that the number would have	6 "discretionary"?
7	been higher?	7 Q. Are they mandatory that this water
8	A. I missed what you had decided in coming	8 board has to give you those costs, or is it a
9	back to the podium. So what which part of this	9 discretionary function that they don't have to
10	table are we talking about? I apologize.	10 give you those costs?
11	Q. Factor three.	11 A. It is a determination that they make
12	A. Factor three of step one?	12 under the enforcement section or enforcement
13	Q. Yes.	13 policy 2010. The board can decide that that is
14	A. Okay.	14 appropriate cause under that particular step.
15	MS. MACEDO: Did you give them credit?	15 Q. Okay. So it is discretionary then?
16	MS. DISIMONE: That is a separate issue	16 A. Yes.
17	from the 1,138,925 gallons that was that is at	17 MS. THORME: Okay. No more questions.
18		,
	issue for the spilled volume. The type of holding	
19	that you're describing within the lagoon while the	MS. MACEDO: Yes. Just a minute.
20	spill was happening, that eventually made it	MR. YOUNG: I'd just like to clarify
21	through to the headwork and were going through the	21 something. I thought that we heard that public
22	treatment process, is not a part of this penalty.	22 commentor Steve Ehens, I thought he said that he
23	BY MS. THORME:	23 had taken the oath.
24	Q. Okay. So where was credit given for	MS. THORME: It's still the public
25	the fact that they kept treating all during the	25 comment period is not under the hearing

also prohibit sewage when it is mixed with storm
                                                               responded to their notice of violation, and vet
2
    water as well?
                                                           2
                                                               for the cooperation and culpability you give them
3
                                                           3
       A. It does.
                                                               a one. It's like if you did something wrong you
4
           MS. MACEDO: I have nothing further.
                                                               immediately call into a debit or however -- an
5
           MR. YOUNG: Any recross? Okay. We'll
                                                           5
                                                               assessment, but what would you have to do to
6
    go to board questions. Mr. Johnston?
                                                           6
                                                               actually earn some credits in that category, above
7
           MR. JOHNSTON: Good afternoon.
                                                           7
                                                               what they did?
8
           MS. DISIMONE: Hi.
                                                           8
                                                                       MS. DISIMONE: I didn't -- there would
9
           MR. JOHNSTON: So under the permit is
                                                           9
                                                               be voluntary cleanup efforts that we typically
    sewage and storm water mixed treated in a
                                                               see. From myself, there was proposals about an
11
    discharge, treated the same as if it were all
                                                          11
                                                               ecological study about the impacts of the spill
    initially sewage and had no storm water mixed with
                                                               afterwards that had actually -- I've seen district
13 it?
                                                               records that indicate they were going out to bid
14
                                                          14
                                                               for that type of report and study, and yet that
           MS. DISIMONE: Yes.
           MR. JOHNSTON: So a gallon of discharge
15
                                                          15
                                                               was never done. I haven't seen that report
16 mixed sewage and storm water is the same as a
                                                          16
                                                               mentioned by the district or discussed.
    gallon of discharged sewage that had no storm
                                                          17
                                                                       There's difficulties in obtaining
18 water mixed in it?
                                                          18
                                                               information concerning the prosecution team before
19
           MS. DISIMONE: Yes, to some extent,
                                                          19
                                                               my time on the case, so I think on balance I'm
20 under the permit, yes. If you're trying to
                                                          20 sensitive to the emergency nature of a spill
21 differentiate how to describe the characteristics
                                                          21 during a flood time. And I acknowledge that
22 of that mixed waste versus another waste, I would
                                                          22 there's a lot that goes on and a lot of
23 recommend looking at factor two under step one.
                                                          23
                                                               coordination effort. I'm certainly sensitive to
24 where it talks about the characteristics of the
                                                               that as a former employee of the city operating a
25 discharge. And I adjusted with wet weather SSOs
                                                               wastewater treatment plant, I get that. But I
                                                Page 222
                                                                                                          Page 224
    that where sewage is mixed with storm water that's
                                                              also don't feel that they went beyond what was
 2
                                                              baseline required in dealing with the cooperation
    assigned a factor score of three.
 3
            MR. JOHNSTON: That's where sewage --
                                                           3
                                                              after the spill and in the subsequent
                                                           4
 4
    okay. So the sewage has been assigned a factor of
                                                              investigations reporting and discharge
 5
                                                           5
    three and being mixed with storm water, and what
                                                              calculations.
 6
    you're saying is it would potentially have been
                                                           6
                                                                      MR. JORDAN: Have you done more than --
7
                                                           7
    assigned a higher number factor if it were not
                                                              have you done the spreadsheet process of more than
 8
    mixed with storm water?
                                                           8
                                                              one spill?
9
                                                           9
            MS. DISIMONE: Could have.
                                                                      MS. DISIMONE: This penalty calculation
10
            MR. JOHNSTON: Thank you.
                                                          10
                                                              methodology is new for this board. It came about
11
                                                          11
                                                              with a 2010 enforcement policy, so the answer is
            MR. YOUNG: Mr. Jordan?
12
                                                              no. But this is the board's first time with it as
            MR. JORDAN: Ms. DiSimone.
                                                          12
13
            MS. DISIMONE: Hi. That's close
                                                          13
                                                              well.
14
                                                          14
                                                                      MR. JORDAN: Would you say then,
    enough.
15
                                                              generically, your stance on the cleanup and
             MR. JORDAN: Okay. I just have a
                                                          15
    couple guestions on step four. And I tend to be
                                                          16
                                                              cooperation line is that if you just do what's
                                                              legally required it's a one?
    agreeable with your statements on culpability,
                                                          17
18 that you felt it was a conservative number, but
                                                          18
                                                                      MS. DISIMONE: Yes.
19 I'm confused on your presentation of the ranking
                                                          19
                                                                      MR. JORDAN: Is that kind of your
                                                          20
20 on the cleanup operation, the history of
                                                               philosophical line in the sand and you work from
21 violations being a neutral number. I'm just
                                                          21
                                                              there?
                                                          22
22 wondering if you could tell me some more about
                                                                      MS. DISIMONE: Yes.
                                                          23
23 that because it seems like in the description you
                                                                      MR. JORDAN: Okay. And then on the
                                                          24
    reward the discharger's behavior. You say they
                                                              history of violations, I get -- I get that
25 responded quickly, they notified the public, they
                                                          25
                                                              explanation. I understand what you're saying.
                                                Page 223
                                                                                                          Page 225
```

```
But then on the history of violations you have
                                                                    MR. JORDAN: Does that -- in your
                                                         2
    none. I don't -- again, I just don't understand
                                                             opinion does that phrase "justice," also include
                                                         3
    from a common sense standpoint of why that's --
                                                             damage to the members of the community or other
 4
    why that's a neutral grade rather than a reward,
                                                         4
                                                             types of occurrences like that? Typically, when
 5
                                                         5
    so to speak?
                                                             you hear that word justice in this setting, you
                                                         6
 6
                                                             start to open up to all types of things that go on
            MS. DISIMONE: It takes a --
 7
                                                         7
            MS. MACEDO: You can't go lower on that
                                                             out in the community. You've identified just hard
 8
                                                         8
                                                             costs for staff?
    factor.
                                                         9
                                                                    MS. DISIMONE: It's the board's
 9
            MR. JORDAN: Oh, you can't. I'm sorry.
                                                        10
                                                             discretion, that particular factor may go up or
10
    That's only a penalty, though?
11
            MS. DISIMONE: Yes.
                                                        11
                                                             down at the board's discretion and determination
12
            MS. THORME: Ms. Macedo is testifying
                                                        12
                                                             of what other factors there could be.
13
                                                        13
    again. That's not true.
                                                                    MR. JORDAN: Okay. Thank you very
14
            MR. JORDAN: I won't listen to her.
                                                        14
                                                            much.
15
    Can you go any lower than that?
                                                        15
                                                                    MR. YOUNG: Dr. Wolff?
16
                                                        16
            MS. DISIMONE: My previous testimony
                                                                    MR. WOLFF: Thank you. You were asked
17
    did include the recognition that you cannot go
                                                        17
                                                             earlier about the district if machinery fails, and
                                                        18
18
    lower than that.
                                                             you answered yes. From your experience working
19
            MR. JORDAN: I understand. And then on
                                                        19
                                                             with the San Luis Obispo treatment plant, would
                                                        20
                                                             that be the reason why a preventative maintenance
20 step seven on the justice category, the dollars
    you're justifying for staff time, do those staff
                                                        21
                                                             program is very important in having redundancy
                                                        22
    dollars come back to the region or do they stay in
                                                             systems in good condition and good operating
23
    the abatement fund?
                                                        23
                                                             condition is critical?
                                                        24
24
            MS. DISIMONE: That's a good question.
                                                                    MS. DISIMONE: Absolutely.
25 I'm going to have to defer to someone else on
                                                        25
                                                                    MR. WOLFF: Thank you.
                                              Page 226
                                                                                                      Page 228
                                                         1
                                                                    MR. YOUNG: Mr. Harris?
    that. I don't believe they come here. I think
 2
                                                         2
    they're part of --
                                                                    MR. HARRIS: Just to clarify the
 3
            MR. JORDAN: So would there be -- would
                                                         3
                                                             75,000, that's not all regional board staff costs,
                                                         4
 4
    there be another witness coming up that --
                                                             that would also, I believe, the office of
 5
            MS. DISIMONE: For the staff -- for the
                                                         5
                                                             enforcement itself?
 6
    staff costs, though. Oh, that. Half of the total
                                                         6
                                                                    MS. DISIMONE: Correct. As the
7
                                                         7
    penalty amount is able to be set aside for
                                                             prosecution team mentioned in the opening
 8
    supplemental environmental projects. So in that
                                                         8
                                                             statement with regards to the entire --
                                                         9
    sense the 75,000 is rolled into that total penalty
                                                                    MR. HARRIS: So you're a water resource
10 amount. A portion of it could come back locally
                                                        10
                                                            control engineer, correct?
                                                        11
11
    as a step four supplemental environmental
                                                                    MS. DISIMONE: I am.
                                                        12
12
    project.
                                                                    MR. HARRIS: And you're a permit writer
13
                                                        13
            MR. JORDAN: I actually just looked up
                                                             at the regional board?
14 the water code section 13385. It's like two lines
                                                        14
                                                                    MS. DISIMONE: Yes, I am.
                                                        15
    that talks about adjustment. It says -- well, it
                                                                    MR. HARRIS: How long have you been
    says and other factors that justice may require,
                                                        16
                                                            writing permits?
                                                                    MS. DISIMONE: I've been writing
17
    that's as little as it says.
                                                        17
18
            MS. DISIMONE: I would point you to the
                                                             permits for a little over a year I've been into
                                                        18
19
    2010 enforcement policy as being further guidance
                                                        19
                                                             this program. Previous to that I did cleanup, and
    for that. There's a little more than two lines on
                                                        20
                                                             then with the city I was -- City of San Luis, I
21 that. But in essence, the board has to make
                                                        21
                                                             was also involved in wastewater treatment plants
                                                        22
    specific findings if they are to determine that
                                                             permitting extensively.
                                                        23
                                                                    MR. HARRIS: Have you ever taken the
23 there are other factors that would require
                                                        24 U.S. Permit writer's class?
    adjustment to the final penalty amount proposed
                                                        25
25 here as justice may require.
                                                                    MS. DISIMONE: Yes, I have.
                                              Page 227
                                                                                                      Page 229

TRANSCRIPT OF HEARING

		1	1
1	MR. HARRIS: And based on what you	1	Let's take a break.
2	learned in that class and based on your	2	(Recess taken.)
3	experience, do you think the event that we're	3	MR. YOUNG: Ms. Macedo, call your next
4	discussing today would qualify as an upset?	4	witness.
5	MS. DISIMONE: No.	5	MS. MACEDO: Absolutely. I'd like to
6	MR. HARRIS: Do you think the event	6	call Jeff Appleton to the stand.
7	that we're discussing today would qualify as a	7	can sen appleton to the stand.
8	bypass?	8	DIRECT EXAMINATION
9	MS. DISIMONE: No.	9	(Jeffrey Appleton)
10	MR. HARRIS: All right. Thank you.	10	BY MS. MACEDO:
11	MR. YOUNG: Mr. Jeffries, any	11	Q. Mr. Appleton, good afternoon. I just
12	questions?	12	want to confirm for the record that you took an
13	MR. JEFFRIES: No, they've been asked	13	oath this morning?
14	already.	14	A. Yes, I did.
15	MR. YOUNG: Okay. All right. Does	15	Q. Okay. And can you state your full name
16	that conclude this witness?	16	for the record?
17	MS. THORME: Mr. Chair, I just wanted	17	A. Jeffrey Wayne Appleton.
18	to ask one follow-up question to get an answer for	18	Q. And where do you currently work,
19	a board member	19	Mr. Appleton, or who are you currently employed
20	MR. YOUNG: Go ahead.	20	by?
21	MS. THORME: Jordan.	21	A. South San Luis Obispo County Sanitation
22	So if you could pull up Exhibit 102,	22	District.
23	Page 15, please. So this is one of the	23	Q. And what was your most recent title
24	prosecution team's exhibits, which was the ACL for	24	there?
25	the North Tahoe Public Utility District, which	25	A. Operator three.
	•		-
	Page 230		Page 232
1	actually occurred on the very same day, December	1	Q. Can you describe your duties there?
2	19, 2010. And as you can see there, they were	2	A. For what position?
3	given an adjustment down for 20.9. Were you aware	3	Q. Operator three.
4	of that, Ms. DiSimone?	4	A. Operation of maintenance of the
5	MS. DISIMONE: I was not aware of	5	district's wastewater treatment plant.
6	that.	6	Q. And what did that include?
7	MS. MACEDO: I was not aware of that	7	A. I never actually performed the duties
8	either, but to the extent that we're talking about	8	of an operator three; so
9	the North Tahoe ACLC North Tahoe, actually, the	9	Q. Okay. How about before operator three,
10	regional board of the recommended penalty from the	1	what was your what was your prior position?
11	prosecution team, so if you want to bring that to	11	A. I was a plant superintendent.
12	the board's attention I'm happy that you did.	12	Q. There you go. And what were your
13	MS. THORME: Well, I didn't bring that	13	duties as plant superintendent?
14	part of it to it. If that's what you're	14	A. The overall operation and maintenance
15	testifying, that wasn't it.	15	of the district's wastewater treatment plant,
16	MR. YOUNG: Mr. Harris, any questions?	16	including filing monthly water quality discharge
17	MR. HARRIS: No.	17	reports, attending board meetings, overseeing the
18	MS. MACEDO: Shall we call our next	18	day-to-day operations of the wastewater treatment
19	witness?	19	plant, personnel management. Basically I was the
20	MR. YOUNG: Yes. And can we find	20	one in charge at the treatment plant.
21	out do we need to break for the reporter?	21	Q. Okay. How many employees reported to
22	THE COURT REPORTER: I think she's	22	you?
23	coming at 3:00.	23	A. It varied. On an average it was
24	MR. YOUNG: At three o'clock. So we	24	between seven and nine.
25	are going to have to break. It's three o'clock.	25	Q. Okay. Who did you report to?
1	Page 231		
	Page 231	I	Page 233

A. To the district administrator, 1 Q. Do you recall specific instances when 2 2 John Wallace. that happened? 3 3 Q. Did you report to the district board at A. Yes, I do. all? 4 4 Q. And can you describe those for me? 5 5 I did attend bimonthly district board There were several. Some of the ones 6 meetings where I did have a superintendent's 6 that stick out in my head, at one point after the 7 7 report. And I would report issues to the district San Simeon earthquake, one of the operators came board of directors. into my office and told me we had a fire inside a 9 Q. Were you present on the day of the 9 pull box, an electrical pull box at the plant. And in responding I could see smoke billowing out 10 spill in question, December 19th, 2010? 10 11 Yes, I was. 11 of the electrical pull box, which was rather 12 Q. Now, have you been present all day 12 frightening to me. 13 today as we've been talking about some of the 13 Fortunately the fire was inside a 14 preventive maintenance issues? portion of conduit. It wasn't actually inside the 15 A. Yes, I have. 15 pull box on the No. 2 primary clarifier. The 16 Q. Okay. I'm going to ask you to look at 16 staff did have to do an emergency repair that day a few of the exhibits that we've gone through, a 17 and pull a new piece of wire to keep the plant in 18 handful of documents that you may have seen 18 operation. 19 before. And the first one I'm going to put in 19 We had other issues with the wiring. I 20 front of you is Exhibit 2. So on the front page 20 remember at one point we had another fire inside 21 of this document it indicates that this is a 2004, the conduit for the No. 1 primary clarifier 22 22 2005 fiscal year budget. I'd just like to point lighting system. It was somewhat of a standard 23 out that on the bottom of the page it indicates 23 occurrence at some point during the year that we 24 that you were plant superintendent at this time; 24 were going to have a conduit that the wiring had 25 is that accurate? 25 failed inside and we'd either have to pull it Page 234 Page 236 1 ourself or have an electrician come in and pull A. Yes, it is. 2 Q. Okay. I'd like you to flip to Page 3 2 **3** of this document. And I'll represent to you that 3 O. So our evidence indicates that since at 4 4 least 2004 the electrical system was scheduled as this is an excerpt of another fiscal year budget 5 from the district. Unless you can recall an MBI, and that stands for main budget item, 6 whether -- I mean, are you familiar with budgets 6 correct? 7 7 from the district? A. The district term actually is major 8 8 budget item. A. Yes, ma'am. 9 9 Q. Did you play any part in preparing Q. Oh, excuse me, major budget item. It 10 them? was scheduled for an upgrade since at least 2004. 11 A. Yes, I did. 11 And does the fact that this MBI is still on the 12 Q. Okay. And you can take a second to budget in 2010, 2011, mean that that major budget 13 review this. 13 item had not been completed? 14 14 A. That is my understanding of the A. Okav. O. Do you recall this particular main 15 15 district's budget process, yes. 16 budget item? 16 Q. Okay. Despite the fact that these --17 17 A. Yes, I do. at least two fires occurred, correct? 18 18 Q. And we talked about electrical issues A. Correct. 19 at your deposition. Do you recall that? 19 Q. Okay. Did you ever bring the problems 20 20 A. Yes, I do. with the electrical to anyone's attention, other 21 Q. Okay. And do you recall the electrical 21 than including them on the budget reports? 22 22 issues leading to, as it's described in this A. Yes, I did.

- Q. How did you bring it to their attention? What did you -- did you ask for it to be fixed, did you say that it proposed a danger, what did -- how did you do that?
- 9 A. Well, I think it's obvious that it was 10 requested to be fixed, because it was placed into 11 the major budget item list. It was obvious that 12 there was deficiencies in the system that were 13 potential hazards. I remember on one occasion 14 when I actually took a section of burned wiring to 15 the board of directors meeting and presented it to 16 the board of directors so they could see what we 17 were dealing with at the plant. We weren't 18 electricians, we were wastewater treatment plant 19 operators. So it was a very difficult situation 20 for us. There were times where we had to repair 21 it to keep the plant running. That wasn't really 22 what we were certified to do.
- Q. I'm going to ask you to take a look at 24 another exhibit. This is 99 to the prosecution 25 team's rebuttal evidence. Before I do that, your

1 A. Yes, I do.

- Now, does that present any problems to Q. you?
- Yes, it does. A.
 - And why is that?
- During my tenure as the plant A. superintendent, since the early part of 2000, the
- 8 valve had been chained and locked in an open
- 9 position. It was in a sub-grade pit that had the
- possibility of flooding. And that valve was
- 11 critical for the standby diesel emergency pump to
- work. If the valve was closed, the pump couldn't
- 13 work. So it was obvious that that valve needed to
- be kept in an open position, so if the pump needed
- to be started you wouldn't have to go below grade
- 16 to where the open channels were, the sewage 17 channels that might flood.
- 18 Q. Now, I'm going to continue on in this 19 exhibit. And on Page 3 of this exhibit, this standard operating procedure is dated May 6th,
- 2011. Do you see the date?

the correct procedure is?

A. Yes, it does.

- 22 A. Yes, I do.
- Q. Okay. And again, we're looking at 24 section B, but now instead of five steps there are six steps. And do you see a new step four? And

does that more accurately reflect what you think

Q. Okay. We also discussed earlier this

Page 240

attorney's asked me to clarify that you are here appearing pursuant to subpoena. You received a 3 subpoena from me, correct?

- Α. Yes, I did.
- Q. Okay. Thank you. Are you familiar with the district's seal in the top left-hand corner?
 - A. Yes, I am.
- 9 Q. Have you seen standard operating 1.0 procedures from the district before?
 - A. Yes, I have.
- 12 Q. Okay. Have you ever prepared or 13 received them before?
 - A. No, I haven't.
- 15 Q. Okay. So it appears that this was 16 issued on October 29th, 2010. Do you see that 17 date?
 - A. Yes, I do.
- 19 Q. Okay. And that it was issued by 20 Mr. Bob Barlagio. Do you know who Mr. Barlagio 21 is?
 - Α. Yes, I do.
- 23 Q. Okay. So going to Page 2 of this 24 document, it indicates that -- on B-3 it indicates 25 to close all 12-inch valves. Do you see that?

5 morning some water intrusion issues. Do you recall that? 7

- A. Yes, I do.
- Q. And we talked about some grading issues 9 that you, I believe, brought to the attention of the people at The Wallace Group. Do you recall 11 that?
 - A. Yes, I do.
- Okay. And this e-mail was one that was submitted by the district in Exhibit 71. Down here it indicates that in 2007 the headworks 15 project had some water ponding issues. And to deal with that one of the things that was done was this. Do you recall this photo being shown this morning?
 - A. Yes, I do.
- 21 Q. Can you describe what this photo 22 **shows?**
- 23 A. Sure. This is the pull box that 24 flooded the day of the spill. After completion of 25 the headworks retaining wall, the grading, the

1	slope of the ground had changed significantly.	1	Q. And in fact it didn't deal with the
2	And what resulted was a low spot, basically a	2	electrical issues, correct?
3	swimming pool directly over the pull box, so even	3	A. It did not.
4	a minimal amount of water drained directly into	4	Q. When small amounts of water were
5	the pull box.	5	applied to this, what would happen?
	·	6	
6	We knew that there was obvious conduit	7	A. Basically, the raised section would
7	issues, all of the main motor leads for the		protrude from the puddle, the puddle was,
8	influent sewage pumps, a 480 volt ran through this	8	depending on where you were standing, out anywhere
9	box. And we were very concerned about having	9	from 6 inches to 12 inches deep around the
10	moisture inside of it.	10	headworks. So that made a little island and all
11	What the staff did is they saw cut	11	of that water would not run into the pull box and
12	about a four-inch section around the edge of it	12	affect the leads.
13	and we placed a berm, a concrete berm or a ramp	13	Q. Did ponding issues still exist after
14	around it to raise the elevation. What it did was	14	this fix?
15	it raised the elevation about an inch and a half	15	A. Yes, they did.
16	above the level of the water, when it was a	16	Q. Okay. Is this the I can rotate it.
17	standing puddle there. And it basically formed a	17	Let me see. Is this a final view?
18	little island in the middle of a great big pond.	18	A. I believe so, yes.
19	That was the low spot that surrounded the headway	19	Q. Okay. And so the water would just run
20	structure.	20	away rather than in?
21	MR. YOUNG: Can I just get	21	A. Well, actually, the water would puddle
22	clarification on when this photograph was taken?	22	up around it. And the lid was high enough to
23	BY MS. MACEDO:	23	where the water level didn't pour into the box.
24		24	Q. Thank you. We also talked a little bit
25	Q. Sure. Mr. Appleton, do you recall when	25	about we also talked a little bit about the
25	this photograph was taken?	23	
	Page 242		Page 244
1		1	
1	A. Not specifically. Sometime in 2007, I	1	leaky influent gate and the emergency bypass pump.

A. We did initiate conversations with pump manufacturers. Most of it was done in-house, 4 though, by my staff. The former shift supervisor Scott Mansco spent months e-mailing and talking to 6 the text support from the pump manufacturer. I don't believe that the administrative staff was too involved with it, but we never did correct the problems with the pump.

Q. Okay. And what about the leaky 11 influent gate?

A. John Wallace had been made well aware 13 of that. I sent him an e-mail with documented pictures of the gate leaking. Again, another 15 engineering project was authorized for a headworks 16 repair project, but it had never been completed by the time this spill had happened.

Q. Who was in charge of conducting the engineering project?

A. That would be John Wallace and his group, the Wallace Group.

Q. Okay. When the actual physical labor 23 for either replacing or improving some of these 24 things, the ponding issues, repairing the leaky 25 influent gate weren't completed, were any reasons 9

A. Yes.

Q. Do you recall what they are?

A. Well, specifically, the shunt switch issue and the sequence of breakers tripping in the MCC building on the day of the spill. I was the operator responding to the MCC building and I know what breakers were tripped. The No. 4 influent pump breaker was tripped. The MCC No. 1, it was a 100 amp breaker which feeds the four influent pump breakers was also tripped. Myself, personally, tried to reset both breakers the morning of the spill. Neither one would reset.

I believe Mr. Thoma said that the No. 1 MCC 100 amp breaker was tripped, but the pump breakers weren't. That's not correct.

16 Issues with the shunt switch were known 17 the day of the spill. The shunt switch cover had 18 to be removed and all of the water drained out of the conduit the day of the spill and contact 20 cleaner sprayed inside of it, because it was still connecting the signal and preventing the breaker 22 from being reset. We let it dry out for an hour or so while the contractors were working downstairs on the pumps. So water from the

2.4 25 conduits for the shunt switch was very well-known

Page 248

Page 246

2 money, that they were too expensive? I mean, were you given a concrete reason?

given? Was it that the district didn't have

A. I don't think I was ever given a concrete reason. It was more along the lines of we're continuing to look into it from an engineering standpoint. Some issues at the plant suggested a pull box. We couldn't wait, so we did what we could in-house. We could fix a very 10 obvious problem, but issues such as the leaking 11 influent gate were never repaired. They were discussed at length many, many times, but no 13 actual work has ever been done on the structure.

Q. In terms of the berm that we just 15 looked at, Exhibit 71, who was responsible for doing that?

A. The operation staff did it in-house.

Q. Okay. So it didn't really cost the district anything?

A. Materials.

21 Q. Okay. You heard Mr. Thoma speak this 22 morning?

23 A. Yes, I did.

Q. Did you have any disagreements with his 25 testimony?

1 the day of the spill.

Q. Okay. Mr. Thoma said he interviewed 3 some district employees to understand what 4 happened on the day of the spill. Did he meet 5 with you?

> No, he didn't. A.

Q. Okay. I believe the district is going to put forth a number of witnesses for its case in chief, but I don't believe they're putting forth 10 any current employees or anyone who currently works at the district itself. You're the only 11 person who responded to the spill that day and is a current district employee. Can you tell us about the day of the spill?

Sure. Where would you like me to A. 16 start?

Q. Well, when did you get a call that you needed to report to the plant?

A. I received a call from Rick Jackman, who was the operator on duty that weekend at approximately 8:30. I don't remember the exact time, but it was about 8:30.

23 Operator Jackman informed me that there 24 was severe flooding happening at the plant. They 25 had received several alarms. I think he had

I responded to the plant. Arrived 10 or 15 minutes later. Arriving at the plant, I found that all the site drains were backed up and overflowing. They were deluged with water. There was large amounts of water encroaching upon the plant from the security court area.

I met with the operators and they gave 13 me a brief run-down of some critical issues that they were facing. There was a failed alarm on the generator, the standby generator. We found out 16 that it was afloat. There was water in the room, but the generator was elevated high enough that that wasn't a critical issue at the time.

The sump pump situation was, in my 20 viewpoint, very critical, because we had water that was pooling around the influent structure and was backing up from the site drainage, and couldn't evacuate the water fast enough. I was afraid that very quickly the water would start to pour into the structure.

1 I entered the pump room and went 2 downstairs and found water pouring out of the 3 light fixtures, out of the sockets in the wall. Water was pouring out of the thick head 5 connections along the -- the large influent pump 6 motors, and there was about a foot of raw sewage 7 in the room. Obviously, the sump pump was 8 overwhelmed or had failed to keep up.

The sewage was about six inches away 10 from covering the motors. To me it was very 11 important to try to keep the motors from becoming covered with water. If they were only damp, that 12 13 means I could have them dry in about 12 hours and 14 have them put back on line. But if they became 15 submerged they'd have to be rewound and that would 16 take days and we wouldn't have any pumping.

So my first action was, I left the pump 18 room, I think Operator Jackman was waiting upstairs and I told him we have to close the 20 influent gate, the pump room is flooding.

As we were closing the influent gate, 22 which is supposed to shut down all of the water flow downstream into the pump rooms and wet well, 24 I informed Operator Alan to start the standby generator -- or start the standby pump. We have a

Page 250

Page 252

I think that at some time around 9:15 I was notified that the influent pumps had failed. One of the operators that was on duty came out. I don't remember exactly what I was doing, but they told me the pumps had failed. So I responded to the MCC room and that's where I found the tripped breakers, the 100 amp service breaker and also the No. 4 influent sewage pump breaker.

I attempted to reset them several times. They wouldn't reset, so I immediately went to the influent pump room to eyeball the pumps themselves to see if I could find out what was happening.

Entering the influent structure, it became obvious that it was flooding. It's a two-story structure, the upper level is a landing where there are check valves and piping. And then a story below that is where the pump rooms are located.

Going down the stairs to the upper landing, I saw water shooting out of the cracks in the concrete, two or three feet. And there was water pouring out of the penetrations through the wall. Electrical conduit boxes had water pouring out of them.

25

Page 251

large diesel pump at the front end of the plant.

As Operator Jackman and I were closing the influent gate, Operator Alan informed me that the pump wouldn't start. So I told him keep trying. We have to close this gate. The gate takes -- it's a two-man job and it takes a while to get the gate closed.

We eventually got the gate closed and the sewage immediately began pouring out of the influent structure. It had filled up the collection system. And since we had shut off the gate there was nowhere else for it to go. So sewage began pouring out of the influent structure.

I went to the emergency standby pump, I tried to start it. I spent several seconds with it. There was some type of a fault in the software controller, it has a computerized software controller for the pump. After several seconds I couldn't get it to start. I knew we were in big trouble, so I went inside and started making some calls for assistance.

One of the first calls that I made was to a local contractor. His name is Chuck Ellison and he runs a company called Fluid Resources

```
Management. They specialize in wastewater and
   wastewater treatment plant systems. I knew that
3 they had a skill set to deal with the issues that
4 we were facing, because there were multiple
   issues. We needed an electrician, a millwright, a
6
   plumber and everything else. And Chuck's company
7
   could handle all of it.
```

Chuck responded a short time later, I do not remember the exact time, I was busy with 10 other things, with two of his crew members. He 11 asked me, "Where do you want me to start? Where do you need help at?"

I said, "Start at the pump. See if you 14 can get the pump running."

8

9

12

13

15

24

8

14

22

At this point I think I informed one of 16 my operators to start making the proper 17 notifications to water quality health department. 18 Aaron Allan was assigned to do that. We had, 19 basically, a flow chart at the plant that had the numbers on it. And I gave it to him and I said, 21 "Start calling people. Write down who you talked 22 to and what time you talked to them and document 23 it."

I went back inside to see how we were 25 doing with the emergency standby pump. One of the

able to get the wet well area de-watered about 2 two o'clock in the afternoon. Was able to open the discharge valve on the standby pump fully, but it wasn't pumping enough to prevent the spill and 5 the overflow.

6 Previously in the day I had made a 7 couple calls to some public agencies. I had called Shane Taylor at the City of AG, and Mike 9 Ford, I believe, with the City of Grover, to see 10 if they had any pumps we could use, and they 11 didn't.

When I contacted the superintendent of 13 the Pismo Beach Wastewater Treatment Plant, Steve Stewart, and I knew he had several big pumps. And 15 I said, "Man, if you can help us, we really need 16 some help."

17 He did bring a pump over later that 18 afternoon. It was about 4:00 or five o'clock. 19 The pump wouldn't start, the battery cables were 20 corroded. The battery was dead. It took us a 21 couple hours to get the pump started.

22 By this time I had sent the contractor 23 down into the pump room. They had ascertained 24 that one of the influent pumps was still serviceable if we had conductors that were above

Page 256

Page 254

FRM employees were able to start the pump, I'm not 2 exactly sure how. We started the pump and immediately found out that the discharge valve was closed, which was located downstairs in the wet pit. The wet well had four feet of sewage in it, 6 but if we didn't get the pump started we were in 7 bia trouble.

So I entered the pit and tried to open the valve. I got it open about halfway, maybe a 10 third. I'm not really sure, that's a guesstimate, 11 because it was kind of busy, until the water got 12 deep enough and I couldn't open it anymore. The 13 sewage got deep enough and I had to evacuate.

The pump was running and we were 15 pumping some. Water was leaking through the 16 influent gate and water was overflowing from the 17 main trunk line and it quickly filled up the 18 entire wet well. It was about 20 feet deep and it 19 was -- where this valve was located was about 20 20 feet below the raw sewage that we had to pump 21 **out.**

So I told one of the operators to get 23 another portable standby pump that we had. We had 24 a six-inch diesel standby pump and we began 25 de-watering the wet well area. We were finally Page 255

ground. Fortunately, we had begun that process earlier in the day to run spare conductors above ground. I knew the conduit in the ground were full of water and I didn't trust putting it back in service.

We got the Pismo pump started. About 8:30 or nine o'clock that night we were able to bring the No. 3 sewage influent pump back online. And at that point we were able to start lowering the level of the water in the collection system.

About ten o'clock it was down low 12 enough that we weren't in the spill mode. We 13 removed the three influent pump motors. They had not been submerged, fortunately for us, they only got damp. We had them transported to a local repair shop, where they dried them. And the following day they were replaced, go back in service and brought back online.

The following morning -- we were experiencing a lot of problems the previous day with the standby pump stalling out. We couldn't figure out why. We thought it was a software problem with the controller, or it just died. And every time it died sewage would begin to flow out 25 of the influent structure.

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

The following day it happened again, we had another spill. We received a report that at the corner of North Swing and Coolidge, a street in the local area, had overflowed that day, so we responded to it.

I believe that the repair shop had the influent motors done by about four o'clock that day. And they were reinstalled and back up and running by about ten o'clock that night. So by 10 about ten o'clock Monday night we basically had 11 pulled all the motors, transported them, dried 12 them, rewired everything and had the plant back up 13 and running and meeting our discharge 14 requirements.

- Q. You know, I put up on the screen a page 16 from Mr. Thoma's declaration, and I'm certainly 17 not an electrician, but this is the pull box in the headworks room, yes?
- 19 A. It's an illustration that represents a 20 pull box.
- Q. I'm sorry. You're right. Now, did 22 this -- I'm pointing on my screen and that's not helpful at all. This here is a pull box, correct?
 - A. Yes.

Q. And on the day of the spill, did it

have a circular chart, the top range is ten

- 2 million gallons a day. And we actually saw a flow
- 3 that flatlined at ten million. And then we
- calculated the flow curve, there probably was a
- peak flow of 13 million gallons, 13 or 14 million 6 gallons a day flow rate.

Q. And when was that?

- A. I don't remember the exact time frame, other than it was around the time of the San Simeon earthquake.
- Q. And in evaluating some of the paperwork in this case, since you've been involved in giving a deposition, and you came up with the spill estimation, you noticed the different discharge 15 points, including the manholes and the private residences. And it seems that you may be the only 16 one who noticed that the discharge at the headworks existed. Can you explain a little bit about that?
- 20 A. Sure. After the influent pumps failed 21 and we were unable to start the emergency standby 22 pump, the collection system filled up and there's an opening, a grading that set directly over the incoming trunk line located within the flood valve 25 containment wall around the headworks. So we were

Page 258

Page 260

fill completely with water?

A. Yes, it did.

Q. And did anyone have to drain it?

A. No. All the water drained down through the conduits into the motor connection heads.

Q. Now, on the day of the spill, Mr. Appleton, do you know how high the flows were?

A. The last documented flow rate that we had before the flow meter fell, was a flow rate of 8.4 million gallons per day.

Q. Do you know the general capacity at the plant?

A. There's two different capacities. 14 There's the dry weather capacity, when there's no precipitation or INA, and there's a wet weather capacity. The plant's dry weather capacity I 17 believe is five million gallons per day. And I 18 think -- I'm not exactly sure of the wet weather 19 capacity but I do believe it's nine million 20 gallons per day.

Q. And what's the largest flow capacity 22 you've ever seen at the plant?

23 A. Well, we weren't actually able to 24 verify the data, but by calculating the curve, we actually had a flow that went off the chart. We

able to actually visualize and see the water level coming up when the influent pumps failed. I'm not 3 sure if that answers you question, but --4

Q. So for example, this is a photo of the headworks?

A. That's actually the opening in the headworks wall where you can access where the control gate is, the influent control gate. You can walk through that door there and you can see grading there and there's some pipework that goes down in the influent line.

When the influent pumps failed and we closed the gate, raw sewage started pouring out of that doorway there at a depth of about six or eight inches.

Q. So this would represent an additional discharge point on the day of the spill?

A. If it was not taken into consideration by other spill amounts, absolutely. There was spilling numerous times during the day. That's the standby pump, the big black unit there, that you can see. And the standby pump failed numerous times throughout the day and it takes several minutes to restart it. And every time during the 25 restart process, again, raw sewage would flow out

1	of that doorway in massive amounts.	1	Mr. Appleton? Was Mr. Appleton
2	Q. Did you assign anyone from the district	2	MR. JOHNSTON: That's the name of the witness.
3	to take either video or photographic evidence of	3	MR. YOUNG: Mr. Appleton, do you want to go
4	either particular manholes or discharge locations	4	ahead and identify yourself again?
5	on the day of the spill?	5	THE WITNESS: Yes.
6	A. I don't know if I did specifics on	6	MR. YOUNG: We have a new reporter.
7	discharge locations, but I gave Operator Jackman a	7	THE WITNESS: My name is Jeffrey Wayne
8	camera and told him, "Your job today is to take	8	Appleton. I live in Grover Beach, California.
9	pictures and document what happens."	9	MR. YOUNG: Okay. Let's continue.
10	Q. Okay. And have you ever seen those	10	MS. MACEDO: I just have a few more questions,
11	photos?	11	Mr. Appleton.
12	A. No, I have not.	12	Till Appletoni
13	MR. YOUNG: Let's take our break and	13	DIRECT EXAMINATION RESUMED
		14	BY MS. MACEDO:
14 15	we'll change out reporters.	15	
	MS. MACEDO: Oh, sure. Thank you.	16	Q We were talking about the discharge
16	(Manage Children CCD No. 10004 manhared Judy J		point or excuse me, the headwork being discharged
17	(Marcy Styles, CSR No. 10604, replaced Judy J.	17	point on the date of the spill. Can you approximate
18	Williams, CSR No. 7314.)	18	how many gallons discharged from the headworks?
19		19	A I can approximate it. They did a rough
20		20	calculation. There is a way to calculate the weir
	////	21	overflow rate if you know the width of an opening and
	/////	22	the depth of the water flowing out of it. It is a
23	////	23	rough approximation.
	////	24	But the rough approximation that I did
25	////	25	during the time of the sewage that was flowing through

Q Have people tried to get you to deviate from that amount?

1	from that amount?	1	testimony today?
2	A Primarily the District administrator,	2	A No, you have not.
3	John Wallace, and his assistant, Tom Alexander.	3	Q And has anything you said today been
4	Q Okay. I anticipate questions will be	4	untruthful?
5	asked by District counsel about a matter that was taken	5	A No, it has not.
6	by the Office of Enforcement against you in 2011. So	6	MS. MACEDO: Okay. No further questions for
7	I'm just going to ask you a couple of questions about	7	this witness at this time.
8	that.	8	MR. YOUNG: Cross?
9	There was an operator certification	9	MS. THORME: Yes.
10	action letter that was filed against you in 2011; isn't	10	
11	that correct?	11	CROSS-EXAMINATION
12	A That's correct.	12	BY MS. THORME:
13	Q And what was the basis of that claim?	13	Q Good afternoon, Mr. Appleton.
14	A I don't remember the specifics. It had	14	A Good afternoon.
15	to do with improper sampling techniques and record	15	Q Are you currently on administrative leave
16	keeping at the wastewater treatment plant.	16	from the District?
17	Q And insufficient evidence was eventually	17	A Yes, I am.
18	found to support that claim, correct?	18	Q Okay. And I think you just discussed the
19	A That's correct.	19	investigation by the office of enforcement against you
20	Q And do you recall the attorney who issued	20	with Ms. Macedo; is that correct?
21	that letter?	21	A That's correct.
22	A I believe it was you.	22	MS. THORME: Okay. Can you switch over,
23	Q Yes, it was me. And so you don't have	23	please, so that we can have the screen? Thank you.
24	any reason to do me any favors at this hearing,	24	And could we have Exhibit 42, please?
25	correct?	25	(Brief pause in proceedings.)
2.5		23	
	Page 266		Page 268
1	A No, I do not.	1	BY MS. THORME:
2	Q And have I ever met you prior to issuing	2	Q Was this the letter of
3	that letter?	3	MS. THORME: No, that is the earlier letter.
4	A No, you have not.	4	The first page. The first page. Yes, okay.
5	Q And have I told you since speaking with	5	Q So this is is this so was this the
6	you at your deposition, that had I spoken to you in	6	letter that you received, a letter that proposed
7	conducting the sort of the investigation now,	7	disciplinary action on January 12th, 2011?
8	connected to this and all of this, you know, I'd like	8	A My eyes are not what they used to be. I
9	you to know if I had to do it all over again, things	9	can't read that
10	may have turned out differently. So to the extent that	10	MS. THORME: Can you pop
11	we did issue the letter and	11	THE WITNESS: from here.
12	MS. THORME: Objection; counsel is testifying	12	MS. THORME: up no, pop up the date,
13	again.	13	please?
14	MS. MACEDO: It's	14	•
15	MR. YOUNG: It's true.	15	THE WITNESS: Do you have a hard copy I can read from?
16	MS. MACEDO: Okay.	16	BY MS. THORME:
17	MR. YOUNG: Okay. There is a lot of this going	17	
			Q Can you see it now?
18	on, and I don't know how to control it, because we're	18	A That date is January 12th, but I can't
19	not in the same environment that I'm used to operating	19	read the rest of the letter.
20	in, and we're supposed to be more flexible.	20	Do you have a hard copy I could review
21	BY MS. MACEDO:	21	or
22	Q How about this	22	MS. THORME: Do you have hard copies of all the
23	MR. YOUNG: So	23	exhibits?
24	BY MS. MACEDO:	24	MS. MACEDO: No.
25	Q have I promised you anything for your	25	///
	Page 267		Page 269

			1	· · · · · · · · · · · · · · · · · · ·
1	BY MS.	THORME:	1	pool of water for the emergency standby pump to a pond.
2	Q	So you don't recall when you received	2	Q Okay. And did you take that action
3	that?		3	intentionally?
4	Α	Not specifically.	4	A Take what action?
5	MS	5. THORME: Okay. Can you pop up the	5	Q To close the influent gates?
6	signatur	re page for me, please?	6	A Yes.
7	Q	So this is page 5 of that letter, and	7	Q Okay. And did you shut down the storm
8	since M	Is. Macedo was testifying that she sent this	8	water sumps to the plant?
9	letter,	can you tell me whose signature that is on the	9	A No, I did not.
10	letter?		10	Q Did you tell anyone to shut down the
11	Α	Mr. Seta, Sato (phonetic).	11	storm water sumps? I believe you testified that you
12	Q	Okay.	12	shut them down so additional water was not coming in
13	Α	I don't know.	13	the head ways earlier.
14	Q	Thank you.	14	A I do not recall testifying to that.
15		And did this letter propose to downgrade	15	Q All right. So do you know whether the
16	your gr	rade three wastewater treatment plant operator	16	storm water sumps were shut down to protect the plant?
17	certific	ate to a grade two?	17	A At some point they were.
18	Α	I don't know. I can't read that letter,	18	Q Okay. And that was not you that did
19	so I can	't comment on it.	19	that?
20	Q	You don't remember	20	A No, it was not.
21	Α	No.	21	Q Okay. And had you ever seen water
22	Q	what they were proposing?	22	migrate into the headworks at any other occasion
23	Α	No.	23	before, that caused an electrical failure?
24	Q	And what was the result? Did you get a	24	A No.
25	letter o	of reprimand from the State Water Board?	25	Q Okay. And the day that you said that
		Page 270		Page 272
1	^	The week the war block I amore all all the	1	there was a 12 million called influent into the plant
1 2	A	The result was that I appealed the	2	
3	_	ade, and I won. They did not downgrade my	3	,
4	certifica O		4	11 112
5	•	Did you receive a letter of reprimand ne State Water Board?	5	-
6	A	Yes, I did.	6	
7	Q	Okay. And so did they find you liable	7	spilled?
8	-	ne violations of the operator certification	8	•
9	regulat		9	January and partition of the partiti
10	A	I don't remember the specific language.	10	
11	o	Okay. And when did you receive this	11	
12	•	ena to appear here today?	12	•
13	А	I believe it was yesterday or the day	13	
14		I'm not sure when.	14	
15	0	So in relation to the spill event in	15	
16	•	you testified that you closed the influent gates	16	
17		of the first steps?	17	
18	A	That's correct.	18	
19	Ô	And was that to protect the downstream	19	F - F
20	process	•	20	-,
21	A	It was to achieve two different	21	
22	objectiv		22	• •
23	23,000,0	One was to prevent the wet well from	23	,,
24	flooding	, which unfortunately, that happened anyway.	24	Construction and the dispersion and

TRANSCRIPT OF HEARING

1 Q Okay. That is not diesel? 2 A It is diesel. 3 Q Okay. And was that intentional? 4 A Was what intentional? 5 Q Was hooking up the emergency bypass pump intentional? 6 intentional? 7 A I didn't hook it up. It was already in place. 9 Q Okay. So it was ready to go? 10 A Yes, it was. 10 Okay. And was that done as a precaution before the storm? 11 Q Okay. And did you start up the engine before you went to open the bypass valve? 12 Defore the storm? 13 A Po, I did not. 14 A Evidently not, because it was in the closed position when the pump was started. 15 Q Okay. And I think you testified with wish. Macedo earlier that you had seen the standard operating procedures at the plant? 16 A I saw the standard operating procedures that she presented on the screen here. 17 Page 274 18 A Is diesel. 2 Q Okay. And was that intentional? 3 A To the best of my knowledge, yes. 4 A To the best of my knowledge, yes. 9 Q Okay. So today you said that you hothers call those agencies; is that correct? 10 A That's correct. 11 A That's correct. 12 Q But in your deposition, you said that made those calls. Which version is correct? 12 A Aaron Allen made the majority of the calls. I did make a few calls. We were both work on the telephones. 13 A Well, I have been employed at the District for 20 years, and I have seen a lot of sew flows. And I'm very familiar with how much a cer quantity of water can represent. And so I would: that while I have never had to calculate a spill am before, I'm well familiar with volumes of water. 12 Q So did you open the valve before you 13 started the engine? 14 A To the best of my knowledge, yes. Q Okay. And dwas that done as a precaution to the required agencies within the two-hou frame? 14 A To the best of my knowledge, yes. 15 Q Okay. And was that you have neverlepoid to the required agencies within the two-hou frame? 16 A To the best of my knowledge, yes. 17 Q Okay. And did you said that you have a correct? 18 A To the best of my knowledge, yes. 19 Q Okay. And how much accret? 19 A Well, I have never had	rted ir time ad t you
Q Okay. And was that intentional? A Was what intentional? Q Was hooking up the emergency bypass pump intentional? A I didn't hook it up. It was already in place. Q Okay. So it was ready to go? A Yes, it was. Q Okay. And was that done as a precaution before the storm? A No, I did not. Q Okay. And did you start up the engine before you went to open the bypass valve? A Evidently not, because it was in the closed position when the pump was started. Q Okay. And I think you testified with Ms. Macedo earlier that you had seen the standard operating procedures at the plant? A I saw the standard operating procedures that she presented on the screen here. A Colar Dear Solid you open the valve before you A Solid you open the valve before you A Evidently not, because it was in the closed position when the pump was started. A I saw the standard operating procedures at the plant? A I saw the standard operating procedures A I saw the standard operating	rted ir time ad t you
4 Sewage. 7 A I didn't hook it up. It was already in place. 9 Q Okay. So it was ready to go? 10 A Yes, it was. 11 Q Okay. And was that done as a precaution before the storm? 12 Defore the storm? 13 A Yes. 14 Q Okay. And did you start up the engine before you went to open the bypass valve? 15 Q Did anyone? 16 A Evidently not, because it was in the closed position when the pump was started. 10 Q Okay. And I think you testified with Ms. Macedo earlier that you had seen the standard operating procedures at the plant? 10 A I saw the standard operating procedures that she presented on the screen here. 11 Q So did you open the valve before you 12 A No, I have not. 13 A Sewage. 9 Q Okay. And was the spill event report to the required agencies within the two-hou frame? 10 A To the best of my knowledge, yes. 9 Q Okay. So today you said that you he the you bate that you had seanches; is that correct? 11 A That's correct. Q But in your deposition, you said that on the majority of the calls. I did make a few calls. We were both work on the telephones. 12 Q Okay. And how much experience do have in estimating sewer spills? 13 A Well, I have been employed at the District for 20 years, and I have seen a lot of sew flows. And I'm very familiar with how much a cer quantity of water can represent. And so I would that while I have never had to calculate a spill am before, I'm well familiar with volumes of water. 1 Q Okay. But you have never been involved as the plant? 2 Q Okay. But you have never been involved as the plant? 2 Q Okay. But you have never been involved as the plant? 2 Q Okay. But you have never been involved as the plant? 2 Q Okay. But you have never been involved as the plant are plant as the plant are plant and the majority of the calls. I did make a few calls. We were both	r time ad t you
Q Was hooking up the emergency bypass pump intentional? A I didn't hook it up. It was already in place. Place. Q Okay. So it was ready to go? Q Okay. And was that done as a precaution before the storm? A Yes, Q Okay. And did you start up the engine before you went to open the bypass valve? A No, I did not. Q Did anyone? A Evidently not, because it was in the closed position when the pump was started. Q Okay. And I think you testified with Ms. Macedo earlier that you had seen the standard operating procedures at the plant? A I saw the standard operating procedures that she presented on the screen here. A Ro, I please. Q Okay. But in your deposition, you said that made those calls. Which version is correct? A A aron Allen made the majority of the scalls. I did make a few calls. We were both work on the telephones. A Well, I have been employed at the District for 20 years, and I have seen a lot of sew. District for 20 years, and I have seen a lot of sew. Page 274 A I saw the standard operating procedures that she presented on the screen here. A I saw the standard operating procedures that she presented on the screen here. A I dash, 2, please. Q So did you open the valve before you District for 20 years, and I have never had to calculate a spill am before, I'm well familiar with volumes of water. District for 20 years, and I have never been involved that while I have never had to calculate a spill am before, I'm well familiar with volumes of water. A No, I have not.	r time ad t you
intentional? A I didn't hook it up. It was already in place. Q Okay. So it was ready to go? A Yes, it was. Q Okay. And was that done as a precaution before the storm? A No, I did not. Q Did anyone? A Evidently not, because it was in the closed position when the pump was started. Q Okay. And I think you testified with Ms. Macedo earlier that you had seen the standard operating procedures at the plant? A I saw the standard operating procedures that she presented on the screen here. A dash, 2, please. Q So did you open the valve before you To the required agencies within the two-hou frame? To the best of my knowledge, yes. A To the best of my knowledge, yes. D Okay. So today you said that you had others calls which version is correct? A That's correct. Q But in your deposition, you said that made those calls. Which version is correct? A A aron Allen made the majority of the calls. I did make a few calls. We were both work on the telephones. Q Okay. And how much experience do have in estimating sewer spills? A Well, I have been employed at the District for 20 years, and I have seen a lot of sew quantity of water can represent. And so I would: that while I have never had to calculate a spill am before, I'm well familiar with volumes of water. Page 274 1 dash, 2, please. Q So did you open the valve before you A No, I have not.	r time ad t you
A I didn't hook it up. It was already in place. 9 Q Okay. So it was ready to go? 10 A Yes, it was. 11 Q Okay. And was that done as a precaution 12 before the storm? 13 A Yes. 14 Q Okay. And did you start up the engine 15 before you went to open the bypass valve? 16 A No, I did not. 17 Q Did anyone? 18 A Evidently not, because it was in the closed position when the pump was started. 19 Q Okay. And I think you testified with 19 dosh, And I think you testified with 10 A I saw the standard operating procedures that she presented on the screen here. 10 A I didn't hook it up. It was already in place. 11 A To the best of my knowledge, yes. 12 Q Okay. So today you said that you hothers call those agencies; is that correct? 10 A That's correct. 11 A That's correct. 12 Q But in your deposition, you said that made those calls. Which version is correct? 13 Mae those calls. Which version is correct? 14 A Aaron Allen made the majority of the calls. I did make a few calls. We were both work on the telephones. 16 have in estimating sewer spills? 18 A Yes. 19 Q Okay. And how much experience do have in estimating sewer spills? 19 A Well, I have been employed at the District for 20 years, and I have seen a lot of sew flows. And I'm very familiar with how much a cer quantity of water can represent. And so I would: that while I have never had to calculate a spill am before, I'm well familiar with volumes of water. 10 Q Okay. But you have never been involved and shapped and the calculate and the calculate and the calculate and the calculate and the place of the seminary procedures and the calculate and	ad t you
8 place. 9 Q Okay. So it was ready to go? 10 A Yes, it was. 11 Q Okay. And was that done as a precaution 12 before the storm? 13 A Yes. 14 Q Okay. And did you start up the engine 15 before you went to open the bypass valve? 16 A No, I did not. 17 Q Did anyone? 18 A Evidently not, because it was in the 19 closed position when the pump was started. 20 Q Okay. And I think you testified with 21 Ms. Macedo earlier that you had seen the standard operating procedures at the plant? 22 A I saw the standard operating procedures 24 that she presented on the screen here. 25 MS. THORME: Okay. If we can have Exhibit 99, Page 274 8 A To the best of my knowledge, yes. 9 Q Okay. So today you said that you hothers call those agencies; is that correct? 10 A That's correct. 11 A That's correct. 12 Q But in your deposition, you said that made those calls. Which version is correct? 14 A Aaron Allen made the majority of the calls. I did make a few calls. We were both work on the telephones. 15 Q Okay. And how much experience do have in estimating sewer spills? 16 A Well, I have been employed at the District for 20 years, and I have seen a lot of sew flows. And I'm very familiar with how much a cer quantity of water can represent. And so I would start while I have never had to calculate a spill am before, I'm well familiar with volumes of water. 16 Q Okay. But you have never been inversed. 17 Q Okay. But you have never; is that correct in another spill-reporting event; is that correct in the power had to calculate a spill am before, I'm well familiar with volumes of water. 1	t you
9 Q Okay. So it was ready to go? 10 A Yes, it was. 11 Q Okay. And was that done as a precaution 12 before the storm? 13 A Yes. 14 Q Okay. And did you start up the engine 15 before you went to open the bypass valve? 16 A No, I did not. 17 Q Did anyone? 18 A Evidently not, because it was in the 19 closed position when the pump was started. 20 Q Okay. And I think you testified with 21 Ms. Macedo earlier that you had seen the standard operating procedures at the plant? 22 A I saw the standard operating procedures 24 that she presented on the screen here. 25 MS. THORME: Okay. If we can have Exhibit 99, 26 Page 274 27 Page 274 28 A No, I have not. 29 Page 274 20 So did you open the valve before you 20 Clokay. So today you said that you have never; is that correct? 20 Pokay. And did you said that you had made those calls those agencies; is that correct? 20 Pokay. And did you start up the engine 21 A A Aaron Allen made the majority of the calls. I did make a few calls. We were both work on the telephones. 21 Q Okay. And how much experience do have in estimating sewer spills? 22 District for 20 years, and I have seen a lot of sew flows. And I'm very familiar with how much a cer flows. And I'm very familiar with how much a cer quantity of water can represent. And so I would that while I have never had to calculate a spill am before, I'm well familiar with volumes of water. 23 Q Okay. But you have never been inversed. 24 In another spill-reporting event; is that correct in another spill-reporting event; is that correct? 25 Q So did you open the valve before you	t you
10 A Yes, it was. 11 Q Okay. And was that done as a precaution 12 before the storm? 13 A Yes. 14 Q Okay. And did you start up the engine 15 before you went to open the bypass valve? 16 A No, I did not. 17 Q Did anyone? 18 A Evidently not, because it was in the 19 closed position when the pump was started. 20 Q Okay. And I think you testified with 21 Ms. Macedo earlier that you had seen the standard 22 operating procedures at the plant? 23 A I saw the standard operating procedures 24 that she presented on the screen here. 25 MS. THORME: Okay. If we can have Exhibit 99, 26 A So did you open the valve before you 17 D Others call those agencies; is that correct? A That's correct. A A Aron Allen made the majority of the calls. I did make a few calls. We were both work on the telephones. 17 Q Okay. And how much experience do have in estimating sewer spills? A Well, I have been employed at the District for 20 years, and I have seen a lot of sew flows. And I'm very familiar with how much a cer quantity of water can represent. And so I would start while I have never had to calculate a spill am before, I'm well familiar with volumes of water. Q Okay. But you have never been inversed. Q Okay. But you have never; is that correct and the majority of the calls. Which version is correct? A No, I have not.	t you
Defore the storm? A Yes. Q Okay. And did you start up the engine before you went to open the bypass valve? A No, I did not. Q Did anyone? A Evidently not, because it was in the closed position when the pump was started. Q Okay. And I think you testified with operating procedures at the plant? A I saw the standard operating procedures that she presented on the screen here. MS. THORME: Okay. If we can have Exhibit 99, Page 274 A Yes. 12 Q But in your deposition, you said that made those calls. Which version is correct? A Aaron Allen made the majority of the calls. I did make a few calls. We were both work on the telephones. 17 Q Okay. And how much experience do have in estimating sewer spills? A Well, I have been employed at the District for 20 years, and I have seen a lot of sew flows. And I'm very familiar with how much a cer quantity of water can represent. And so I would sthat while I have never had to calculate a spill am before, I'm well familiar with volumes of water. Q Okay. But you have never been inversed. Q Okay. But you have never been inversed. A No, I have not.	
before the storm? A Yes. Q Okay. And did you start up the engine before you went to open the bypass valve? A No, I did not. Q Did anyone? A Evidently not, because it was in the closed position when the pump was started. Q Okay. And I think you testified with Ms. Macedo earlier that you had seen the standard operating procedures at the plant? A I saw the standard operating procedures that she presented on the screen here. Ms. THORME: Okay. If we can have Exhibit 99, A dash, 2, please. Q So did you open the valve before you D dash, 2, please. A Yes. A A Yes. A A Aaron Allen made the majority of the calls. I did make a few calls. We were both work on the telephones. A A Evidently not, because it was in the closed position when the pump was started. B A Well, I have been employed at the District for 20 years, and I have seen a lot of sew flows. And I'm very familiar with how much a cer quantity of water can represent. And so I would start while I have never had to calculate a spill am before, I'm well familiar with volumes of water. A No, I have not.	
A Yes. Q Okay. And did you start up the engine before you went to open the bypass valve? A No, I did not. Q Did anyone? A Evidently not, because it was in the closed position when the pump was started. Q Okay. And I think you testified with Ms. Macedo earlier that you had seen the standard operating procedures at the plant? A I saw the standard operating procedures that she presented on the screen here. MS. THORME: Okay. If we can have Exhibit 99, Page 274 1 dash, 2, please. Q Okay. And did you start up the engine 14 A Aaron Allen made the majority of the 15 calls. I did make a few calls. We were both work 16 on the telephones. 17 Q Okay. And how much experience do 18 have in estimating sewer spills? 18 A Well, I have been employed at the 29 District for 20 years, and I have seen a lot of sew. 20 Q operating procedures at the plant? 21 dash, 2, please. 22 dash, 2, please. 23 dash, 2, please. 24 dash, 2, please. 25 Q So did you open the valve before you 26 dash, 2, please. 27 dash, 2, please. 28 a A No, I have not.	
Q Okay. And did you start up the engine before you went to open the bypass valve? A No, I did not. Q Did anyone? A Evidently not, because it was in the closed position when the pump was started. Q Okay. And I think you testified with Ms. Macedo earlier that you had seen the standard operating procedures at the plant? A I saw the standard operating procedures that she presented on the screen here. MS. THORME: Okay. If we can have Exhibit 99, Page 274 A Aaron Allen made the majority of the calls. I did make a few calls. We were both work on the telephones. A Well, I have been employed at the District for 20 years, and I have seen a lot of sew. Plows. And I'm very familiar with how much a cer quantity of water can represent. And so I would start while I have never had to calculate a spill am before, I'm well familiar with volumes of water. A dash, 2, please. A Aaron Allen made the majority of the calls. I did make a few calls. We were both work on the telephones. A Well, I have been employed at the District for 20 years, and I have seen a lot of sew. And I'm very familiar with how much a cer quantity of water can represent. And so I would start while I have never had to calculate a spill am before, I'm well familiar with volumes of water. Q Okay. But you have never been inversed. I in another spill-reporting event; is that correct that you have never been inversed.	ing
before you went to open the bypass valve? A No, I did not. Q Did anyone? A Evidently not, because it was in the closed position when the pump was started. Q Okay. And I think you testified with Ms. Macedo earlier that you had seen the standard operating procedures at the plant? A I saw the standard operating procedures that she presented on the screen here. Ms. THORME: Okay. If we can have Exhibit 99, Page 274 Calls. I did make a few calls. We were both work on the telephones. 16	ing
A No, I did not. Q Did anyone? A Evidently not, because it was in the closed position when the pump was started. Q Okay. And I think you testified with Ms. Macedo earlier that you had seen the standard operating procedures at the plant? A I saw the standard operating procedures that she presented on the screen here. MS. THORME: Okay. If we can have Exhibit 99, Page 274 dash, 2, please. Q Okay. And how much experience do have in estimating sewer spills? A Well, I have been employed at the District for 20 years, and I have seen a lot of sew. 21 flows. And I'm very familiar with how much a cer 22 quantity of water can represent. And so I would see that she presented on the screen here. A But I have never had to calculate a spill am 24 before, I'm well familiar with volumes of water. Q Okay. But you have never been inversed. Q Okay. But you have never been inversed. A No, I have not.	ing
Q Did anyone? A Evidently not, because it was in the closed position when the pump was started. Q Okay. And I think you testified with Ms. Macedo earlier that you had seen the standard operating procedures at the plant? A I saw the standard operating procedures that she presented on the screen here. Ms. THORME: Okay. If we can have Exhibit 99, Page 274 dash, 2, please. Q Okay. And how much experience do have in estimating sewer spills? 18	
A Evidently not, because it was in the closed position when the pump was started. Q Okay. And I think you testified with Ms. Macedo earlier that you had seen the standard operating procedures at the plant? A I saw the standard operating procedures that she presented on the screen here. MS. THORME: Okay. If we can have Exhibit 99, Page 274 A Evidently not, because it was in the 18 have in estimating sewer spills? A Well, I have been employed at the District for 20 years, and I have seen a lot of sew flows. And I'm very familiar with how much a cer quantity of water can represent. And so I would standard operating procedures 22 that while I have never had to calculate a spill am before, I'm well familiar with volumes of water. Q Okay. But you have never been involved at the 24 box operating sewer spills? A Well, I have been employed at the District for 20 years, and I have seen a lot of sew flows. And I'm very familiar with how much a cer quantity of water can represent. And so I would standard before, I'm well familiar with volumes of water. Q Okay. But you have never been involved at the 25 Q Okay. But you have never been involved at the 26 A No, I have not.	
closed position when the pump was started. Q Okay. And I think you testified with Ms. Macedo earlier that you had seen the standard operating procedures at the plant? A I saw the standard operating procedures that she presented on the screen here. MS. THORME: Okay. 1	meters. So all of the other ones were hypothetical.	1	MR. YOUNG: But that was after the spill?
2	Mine was factual.	2	MR. JEFFRIES: After
3	Q Okay. And are the electrical pull boxes	3	THE WITNESS: After.
4	at the plant, designed so rainwater or groundwater that	4	MR. JEFFRIES: No, I'm talking about before the
5	does enter those boxes, drains to a sump that is pumped	5	spill?
6	to be treated?	6	THE WITNESS: No, sir.
7	A I'm sorry, but could you repeat the	7	MR. JEFFRIES: Because the previous testimony
8	question?	8	by Mr. Thoma or is that
9	Q The electrical pull boxes at the plant,	9	MR. YOUNG: Thoma was the first one.
10	are they designed so that rainwater and groundwater	10	MR. JEFFRIES: Right. He stated that there
11	that does enter those boxes, drains to a sump that is	11	should have been some kind of plug within those
12	pumped to be treated?	12	conduits to stop the water from coming into that unit
13	A I'm not sure. Some of them maybe, but	13	where the pumps were located and to trip the circuit
14	I'm not sure if all of them do.	14	breakers. And I'm just trying to visualize or find out
15	MS. THORME: Okay. No further questions.	15	how those conduits were not protected?
16	MS. MACEDO: I have no redirect.	16	THE WITNESS: Well, the state of that pull box
17	MR. YOUNG: Okay. Let see if the board has any	17	was very well known. We had been discussing that
18	questions. We will start at this end.	18	particular pull box in the general overall plan of the
19	Mr. Jeffries?	19	reconductor project for approximately seven or eight
20	MR. JEFFRIES: I don't know where to start.	20	years.
21	MR. YOUNG: At the beginning.	21	It was well known that the conduits
22	MR. JEFFRIES: Okay. The electrical conduit	22	weren't sealed that led to the pump ground. It was
23	box in question, how far is it from the pumps	23	well known that the box had cracks in it, and there was
24	themselves?	24	a lot of groundwater that had entered it. The site
25	THE WITNESS: Well, it's located above grade at	25	didn't work.
		2 3	
	Page 278		Page 280
1	ground level. The pumps themselves are two stories	1	THE REPORTER: I'm sorry excuse me
2	below ground in a pump room, so maybe 14 feet in the	2	THE WITNESS: the department
3	line distance.	3	MR. YOUNG: Slow down.
4	MR. JEFFRIES: And in your experience in the	4	THE REPORTER: I'm sorry, but could you
5	tenure at the agency, have you ever noticed water	5	please slow down?
6	coming out of those particular conduit pipes in the	6	MR. YOUNG: Slow down.
7	past?	7	THE WITNESS: I'm sorry.
8	THE WITNESS: I have never noticed water coming	8	MR. YOUNG: Slow down.
9	out of the particular motor leads that went into the	9	THE WITNESS: Where was I?
10	influent pumps. That would have been a very noticeable	10	THE REPORTER: You said something didn't work.
11	warning sign for at 3 force 8 power (phonetic).	11	THE WITNESS: Okay. I think I know where I was
12	We did have a lot of problems in the past	12	at.
13	with water intrusions through other penetrations such	13	The condition of the pull box was well
14	as piping and electrical conduits and the head ways	14	known to both myself and the staff, to the
15	area.	15	administrators and the board of directors.
16	MR. JEFFRIES: Did you or any of the	16	We would have annual major budget item
17	maintenance crew of the agency, replace any wiring	17	meetings where all the major budget items would be
18	within those conduits in question?	18	talked about, and this was one of the major budget
19	THE WITNESS: For the influent pumps?	19	items that was talked about on an annual basis. We had
20	MR. JEFFRIES: Yes.	20	myself and my staff would meet with the administrator
21	THE WITNESS: We did not. We had a local	21	staff, and we would impress upon them the importance of
22	contractor through resources management who did it and	22	these major budget items, so this was discussed
23	actually ran it above ground conductors in a spare	23	annually.
24	piece of conduit because I was not comfortable trying	24	MR. JEFFRIES: I well, I was trying to
25	to reenergize the conduits that were in the ground.	25	determine and I realize that because it had been
	Page 279		Page 281

TRANSCRIPT OF HEARING

		1	
1	brought up in budget cycles over the two or three years	1	building, but they have a sensing capability to sense a
2	or maybe longer than that, that there was a major item	2	short, and that is what tripped the breakers.
3	on the budget to do something with that box.	3	MR. JEFFRIES: Okay. I have got the picture.
4	And so subsequently and it's obvious	4	Thank you very much.
5	to me that there was some minor repairs done to the box	5	MR. YOUNG: Okay. Just so I'm clear about the
6	by raising the lid because of the water issues getting	6	seals.
7	into the pull box itself.	7	Mr. Conan (phonetic) testified that the
8	So then the flooding of the pull box,	8	seals on the conduits should have been put in back in
9	evidently draining of the conduits into the pump rooms,	9	
10		10	the '60s sometime, and that they were not.
11	which tripped the trip the circuit breakers, which caused the whole issue to start to fail. And, you	1	And he also said that after construction,
	· •	11	after installation, that it would not be easy to see
12	know, I don't know how you did what you did, quite	12	that the seals were no longer that they weren't
13	frankly, just listening to what you presented.	14	there.
14	But besides that, what I want to know is	1	Are you saying that the District was
15	was this information aware where you aware that this	15	aware that the seals were missing?
16	pull box it was obvious that there was an issue with	16	THE WITNESS: Yes, sir.
17	the pull box, and that is why the lid was raised up	17	MR. YOUNG: So what Mr. Thoma said earlier, was
18	above.	18	not accurate?
19	And why you mentioned something	19	THE WITNESS: That's correct.
20	earlier in your testimony that there was a change in	20	MR. YOUNG: Okay. Mr. Harris?
21	the area after the earthquake, is that correct, did it	21	MR. HARRIS: Prior to the spill, were you ever
22	sink?	22	present when the regional board did their inspections
23	THE WITNESS: What happened after the	23	of the plant?
24	earthquake, we obtained FEMA funds the District did.	24	THE WITNESS: Yes, I was.
25	The former flood wall was about two feet high. And	25	MR. HARRIS: Were any of the issues that we
	Page 282		Page 284
1	FEMA said, We will give you funds because of this	1	talked about today, discussed with the regional board
2	damage, but you have to meet it. Meaning the one	2	staff, or did they point that out to you at the time?
3	hundred year flood levels.	3	THE WITNESS: Well, we talked about a lot of
4	MR. JEFFRIES: Right.	4	issues today, so I really can't be
5	THE WITNESS: So the whole retaining wall	5	MR. HARRIS: Well, I'm thinking about the
6	around the headworks was tore out. It was re-graded	6	susceptibility of the junction box, the pull box to
7	and re-blacktopped. But as a result of the	7	flooding, maybe the condition of the standby
8	engineering, instead of the water all flowing away from	8	THE WITNESS: I don't believe we ever brought
9	the headworks	9	that to any of the inspectors' attention.
10	MR. JEFFRIES: It flowed	10	MR. HARRIS: Okay. Thank you.
11	THE WITNESS: It what they made was a	11	MR. YOUNG: Dr. Wolf?
12	depression around the entire area so we have a puddle	12	DR. WOLF: There was a lot of discussion about
13	anywhere from a foot to two-and-a-half feet deep, that	13	the seal seals, plural. In addition to
14	extended out from the headworks and also covered up the	14	moisture-intrusion protection, aren't seals also
15	pull box and subjected it to flooding.	15	generally required for a fire protection to prevent
16	MR. JEFFRIES: Okay. And so those conduits go	16	propagation of fire within conduits in case of a short?
17	directly from that pull box into the pump station	17	THE WITNESS: Yes, they are. It's called the
18	itself?	18	class one dead one requirement. It has to do with
19	THE WITNESS: That's correct.	19	electrical connections that are made within the
20	MR. JEFFRIES: The conduits filled up with	20	proximity of an explosive (phonetic) source.
21	water. The water went into the circuit breakers. The	21	DR. WOLF: Correct. And that is why the seal
22	circuit breakers tripped.	22	also has to be fire rated by UL?
23	THE WITNESS: Actually, the water went into the	23	THE WITNESS: That's correct.
24	motors themselves where the connections were made, and	24	DR. WOLF: Okay. Thank you.
25	the circuit breakers are located in a different	25	My next question pertains to the
	Page 283		Page 285

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

emergency backup pump, which is the pump operated by pumps were beyond what small troubleshooting skills you 2 the diesel engine. And you mentioned that the pump 2 could have gotten from a one- or two-day seminar. They 3 3 was -- the diesel engine had problems being on and off. had to send out a factory worker out from Texas for 4 Realizing that yourself and your team, as 4 detection to actually figure out what the problem was 5 you described earlier, are not electricians nor diesel 5 with that pump on several occasions. It was a very 6 mechanics, was there a budget to perform maintenance 6 problematic pump. 7 7 using an outside agency of these diesel engines? DR. WOLF: Thank you. 8 8 THE WITNESS: I don't know if there was a Did you experience mistripping of the 9 specific budget. But in my rule as the plant 9 circuit breakers after the events, the coordination 10 superintendent, I did have the authority to make 10 study having been performed, prompted by the fact that 11 repairs up to \$1,000. And anything higher than that 11 there was miscoordination between the main circuit 12 would have to be approved by the District 12 breaker and the downstream breakers causing all pumps 13 administrators or the board of directors. 13 to fail, actually, rather than only one? 14 14 The pump itself, during the time that we Did you experience, in the years you 15 were trying to troubleshoot it, didn't require repair 15 worked for the plant, other problems sometimes with 16 costs because we had not purchased it yet. It was 16 some of the breakers? 17 still in the purchasing stage. It took about three 17 THE WITNESS: Not really. Breakers were 18 somewhat of a sensitive subject at the plant. The MCC years of having the pump on-site and having numerous 18 19 problems with it, having to send it back to the factory 19 building is where we dealt with a lot of the 20 20 several times before we actually accepted it. three-phase, high-voltage electricity, and so we tried 21 So the pump was very problematic and even 21 to keep up our preventative maintenance on the program 22 at the time we accepted it, the staff in total made a 22 on the buses (phonetic) and the breakers. 23 23 recommendation to Administrator Wallace that we didn't But whenever we noticed something that 24 want the pump. We told him it's a lemon, that we're 24 was out of kilter, especially on the electrical system, 25 25 going to have problems with it. we would have it addressed by our certified Page 286 Page 288 1 1 But the manufacturer offered the District electrician. 2 2 a significant discount, and so we bought the pump at DR. WOLF: So were these breakers -- was there 3 the discount price. 3 electrical testing performed on these breakers? 4 4 DR. WOLF: All right. Was there an extended Earlier in the testimony of Mr. Thoma, he 5 5 warranty? mentioned that he would hire an outside agency to 6 THE WITNESS: Yeah, you know --6 perform the electrical testing of the breakers which, 7 7 DR. WOLF: That was -you know, would be a primary injection testing. 8 8 THE WITNESS: -- I can't remember. So when you mentioned maintenance, that 9 9 DR. WOLF: That was my attempt at humor. was just basically operating the breaker on and off, or 10 Obviously, it didn't go very well. 10 was there actually verifying its trip settings? 11 All right. So my next question is in a 11 THE WITNESS: Well, that will take a little bit 12 12 of an explanation. In the past, the board of directors facility like the water treatment plant, where you have 13 a lot of complex systems, both mechanical and 13 had to authorize a maintenance mechanic's slash 14 electrical, to keep up with the technology and with the 14 electrician position at the plant. And so I had 15 state of the industry in operation and maintenance, was 15 several maintenance mechanics over the years that were 16 there a budget to have yourself and your team get some 16 also certified electricians that could tighten lugs on 17 17 training? breaker boxes and do low testing and things of that 18 THE WITNESS: Yes, we did have a budget for 18 sort. 19 membership schools and trainings, and my operators went 19 But several years ago before the board of 20 20 to numerous classes throughout the years. I would directors eliminated that position, and I no longer had leave it up to them on their particular area of 21 21 certified electricians on the staff, there were certain 22 22 interest. If I have someone really interested in restrictions that would prevent people who aren't 23 mechanical seals, I'd sent him to one of those classes. 23 trained in proper electrical procedures from doing work

24

25

Page 287

inside of the breaker boxes. And so our maintenance

program, we had contracted out over the years to

So we did have an ample budget for training.

However, the problems with the standby

TRANSCRIPT OF HEARING

1	various electrical contractors.	1	MR. JORDAN: In your experience, is that
2	But we did have a computerized	2	something that happens at every treatment plant, some
3	maintenance program that generated work orders on a	3	type of backup like that, or is there a particular
4	regular basis. Most of those work orders were based	4	reason that you would hard install it for the wet
5	upon manufacturers' recommendations.	5	season?
6	DR. WOLF: Okay. And my last question is when	6	THE WITNESS: Due to the difficulties and the
7	you responded to the emergency and water was coming	7	length of time it took to actually hard connect it to
8	down from the light fixtures and out of the junction	8	the discharge pipe. It was an hours-long process, and
9	boxes, I'm sure there was some electrical safety	9	such as when we had the spill on the 19th, if we had to
10	concerns associated with your activities.	10	spend three or four hours hooking the pump up before we
11	THE WITNESS: Is that a question?	11	could even get it running, we felt it was time that was
12	DR. WOLF: Yes, that is a question.	12	going to be wasted while we were trying to deal with in
13	THE WITNESS: I'm sorry. I didn't understand	13	an emergency.
14	the question.	14	So we felt the better solution was to
15	DR. WOLF: Okay. Let me rephrase the question.	15	actually put it in place, hard pipe it and have it
16	When you responded to the emergency in	16	ready to start up and run in case of a spill, in case
17	the basement, and you saw water coming out of the light	17	we would lose pump capacity.
18	fixtures and out of the junction boxes, I would assume	18	MR. JORDAN: And then earlier you talked about
19	that there was some serious electrical safety hazard	19	the generator. You also had problems with the
20	concern that you had when you were trying to get the	20	generator, right?
21	plant back in operation?	21	THE WITNESS: We didn't actually have problems
22	THE WITNESS: You would be correct.	22	with the generator. We had an alarm that the generator
23	DR. WOLF: All right. Thank you.	23	room was flooded. There was a small flow that sits on
24	MR. YOUNG: Mr. Jordan?	24	the floor and as the water level comes up, it activates
25		25	-
23	MR. JORDAN: Thank you, Mr. Chair.	23	the flow. So there was probably six inches of water in

Anyway, so we hard connected the pipe to the pump sometime in September, the middle of September and the pump was basically left there through the	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	But the generator itself is on a pedestal and it sits a foot and a half or two feet above the floor level, so it was not a major concern for me at the time. MR. JORDAN: And between the two of them, I think you mentioned before and again, in another answer, that you had to have a fluid prime the pump. Is there not a process that is easy to during September until whenever that season is, that you have the pump hard hooked up and you have the generator ready to go, but you're not continually testing those? THE WITNESS: We did test actually, I want to back up and point out one thing. The pump has a self-prime function. It has the gas-charged cylinder, where it would start to prime itself, so it could start pumping. We have had problems with that throughout the years too, but it was capable of being started to dry and self-priming itself. As far as running the pump. We did have in our preventive work order system, a work order that was generated on a regular basis to run the pump, test the pump. But due to certain restrictions from local

1	could run the pump. And I don't remember the	1	one of those.
2	specifics, but I think the longest that we were able to	2	MR. JOHNSTON: I'm referring to the earlier
3	run the pump I think at one time, was either 10 or 15	3	one. And unless I'm mistaken, the earlier one said
4	minutes.	4	when you shut down the pump, you close all 12-inch
5	MR. JORDAN: Okay. And really more of my	5	valves, and when you start up the pump, before you
6	question would be, how often did you run it to test	6	start the pump, you open the discharge valve.
7	that it was working?	7	THE WITNESS: That's correct.
8	THE WITNESS: At least monthly.	8	MR. JOHNSTON: So that was the earlier so
9	MR. JORDAN: Okay. Thank you.	9	that was the SOP that was in effect at the time of the
10	MR. YOUNG: Mr. Johnston?	10	incident?
11	MR. JOHNSTON: Yes. Good afternoon,	11	THE WITNESS: That's correct.
12	Mr. Appleton.	12	MR. JOHNSTON: So my question is, was it simply
13		13	human error that that SOP was not followed? That
14	Okay. So there was testimony that the standard operating procedure for running the diesel	14	instead of opening the valve, and then starting the
15		15	
16	bypass pump involved first opening the 12-inch valve and then starting the pump.	16	pump, the sequence was starting the pump and then
	And you just testified that you would	17	opening the valve?
17 18	· ·	18	THE WITNESS: I guess you could say it was
19	routinely, for brief periods of time, start up the	19	human error. I was out there and the man in charge who
	pump, test the operation. When you did that, would you	20	tried to start the pump I had never seen that
20	run through that whole procedure, open the valve, start	21	particular SOP that instructed for that valve to be
21	the pump?	22	closed, or I would have stricken it from the record,
22	THE WITNESS: No, sir. The valve, during the		and I would have corrected it.
23	time that I was a plant superintendent, was actually	23	My previous way of dealing with it

I understand you had authority to do maintenance work less than a \$1,000. The District put up an exhibit that said ultimately, We're replacing the seal that caused the problem was an 8- or something in the high three figures, 8 or 900 bucks. I don't remember exactly how much. If the I understand that there was a
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	absence, some maintenance work was done on the valve, and it was not placed back in the open position and locked. Whenever it is was through being worked on, the valve was left in a closed position. MR. JOHNSTON: Okay. So it had been locked in the open position before? THE WITNESS: Yes. MR. JOHNSTON: Okay. And so can you explain why? Was it simply a human error that the pump when there was an operating procedure of open the valve, start the pump, that what was implemented was in reverse? THE WITNESS: I'm not sure if I understand your question. MR. JOHNSTON: Okay. THE WITNESS: The operating procedure that was in place in October of 2010, was erroneous, because it said to keep the valve in closed position and only open it when you need to run the pump. MR. JOHNSTON: That's correct.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	was left in the open position and the chain and padlock were placed on it so it could not be closed. When I went to start the pump, I never thought of opening the valve. I had never seen that SOP that stated to open the valve, so that is kind of what happened. MR. JOHNSTON: Are you testifying that it was your your assumption that the valve was already open? THE WITNESS: That's correct. MR. JOHNSTON: Okay. Let's talk about seals for a minute. I understand you had authority to do maintenance work less than a \$1,000. The District put up an exhibit that said ultimately, We're replacing the seal that caused the problem was an 8- or something in the high three figures, 8 or 900 bucks. I don't remember exactly how much. If the I understand that there was a \$200,000 or approximately rewiring project that
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	absence, some maintenance work was done on the valve, and it was not placed back in the open position and locked. Whenever it is was through being worked on, the valve was left in a closed position. MR. JOHNSTON: Okay. So it had been locked in the open position before? THE WITNESS: Yes. MR. JOHNSTON: Okay. And so can you explain why? Was it simply a human error that the pump when there was an operating procedure of open the valve, start the pump, that what was implemented was in reverse? THE WITNESS: I'm not sure if I understand your question. MR. JOHNSTON: Okay. THE WITNESS: The operating procedure that was in place in October of 2010, was erroneous, because it said to keep the valve in closed position and only open it when you need to run the pump. MR. JOHNSTON: That's correct. THE WITNESS: And then the District later, I	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	was left in the open position and the chain and padlock were placed on it so it could not be closed. When I went to start the pump, I never thought of opening the valve. I had never seen that SOP that stated to open the valve, so that is kind of what happened. MR. JOHNSTON: Are you testifying that it was your your assumption that the valve was already open? THE WITNESS: That's correct. MR. JOHNSTON: Okay. Let's talk about seals for a minute. I understand you had authority to do maintenance work less than a \$1,000. The District put up an exhibit that said ultimately, We're replacing the seal that caused the problem was an 8- or something in the high three figures, 8 or 900 bucks. I don't remember exactly how much. If the I understand that there was a \$200,000 or approximately rewiring project that had been on the books for a while, and that had not
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	absence, some maintenance work was done on the valve, and it was not placed back in the open position and locked. Whenever it is was through being worked on, the valve was left in a closed position. MR. JOHNSTON: Okay. So it had been locked in the open position before? THE WITNESS: Yes. MR. JOHNSTON: Okay. And so can you explain why? Was it simply a human error that the pump when there was an operating procedure of open the valve, start the pump, that what was implemented was in reverse? THE WITNESS: I'm not sure if I understand your question. MR. JOHNSTON: Okay. THE WITNESS: The operating procedure that was in place in October of 2010, was erroneous, because it said to keep the valve in closed position and only open it when you need to run the pump. MR. JOHNSTON: That's correct. THE WITNESS: And then the District later, I think in May of the following year, issued another SOP	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	was left in the open position and the chain and padlock were placed on it so it could not be closed. When I went to start the pump, I never thought of opening the valve. I had never seen that SOP that stated to open the valve, so that is kind of what happened. MR. JOHNSTON: Are you testifying that it was your your assumption that the valve was already open? THE WITNESS: That's correct. MR. JOHNSTON: Okay. Let's talk about seals for a minute. I understand you had authority to do maintenance work less than a \$1,000. The District put up an exhibit that said ultimately, We're replacing the seal that caused the problem was an 8- or something in the high three figures, 8 or 900 bucks. I don't remember exactly how much. If the I understand that there was a \$200,000 or approximately rewiring project that had been on the books for a while, and that had not been done.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	absence, some maintenance work was done on the valve, and it was not placed back in the open position and locked. Whenever it is was through being worked on, the valve was left in a closed position. MR. JOHNSTON: Okay. So it had been locked in the open position before? THE WITNESS: Yes. MR. JOHNSTON: Okay. And so can you explain why? Was it simply a human error that the pump when there was an operating procedure of open the valve, start the pump, that what was implemented was in reverse? THE WITNESS: I'm not sure if I understand your question. MR. JOHNSTON: Okay. THE WITNESS: The operating procedure that was in place in October of 2010, was erroneous, because it said to keep the valve in closed position and only open it when you need to run the pump. MR. JOHNSTON: That's correct. THE WITNESS: And then the District later, I think in May of the following year, issued another SOP that said the valve should be in the open position	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	was left in the open position and the chain and padlock were placed on it so it could not be closed. When I went to start the pump, I never thought of opening the valve. I had never seen that SOP that stated to open the valve, so that is kind of what happened. MR. JOHNSTON: Are you testifying that it was your your assumption that the valve was already open? THE WITNESS: That's correct. MR. JOHNSTON: Okay. Let's talk about seals for a minute. I understand you had authority to do maintenance work less than a \$1,000. The District put up an exhibit that said ultimately, We're replacing the seal that caused the problem was an 8- or something in the high three figures, 8 or 900 bucks. I don't remember exactly how much. If the I understand that there was a \$200,000 or approximately rewiring project that had been on the books for a while, and that had not been done. But would, if, as you testified, it was
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	absence, some maintenance work was done on the valve, and it was not placed back in the open position and locked. Whenever it is was through being worked on, the valve was left in a closed position. MR. JOHNSTON: Okay. So it had been locked in the open position before? THE WITNESS: Yes. MR. JOHNSTON: Okay. And so can you explain why? Was it simply a human error that the pump when there was an operating procedure of open the valve, start the pump, that what was implemented was in reverse? THE WITNESS: I'm not sure if I understand your question. MR. JOHNSTON: Okay. THE WITNESS: The operating procedure that was in place in October of 2010, was erroneous, because it said to keep the valve in closed position and only open it when you need to run the pump. MR. JOHNSTON: That's correct. THE WITNESS: And then the District later, I think in May of the following year, issued another SOP	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	was left in the open position and the chain and padlock were placed on it so it could not be closed. When I went to start the pump, I never thought of opening the valve. I had never seen that SOP that stated to open the valve, so that is kind of what happened. MR. JOHNSTON: Are you testifying that it was your your assumption that the valve was already open? THE WITNESS: That's correct. MR. JOHNSTON: Okay. Let's talk about seals for a minute. I understand you had authority to do maintenance work less than a \$1,000. The District put up an exhibit that said ultimately, We're replacing the seal that caused the problem was an 8- or something in the high three figures, 8 or 900 bucks. I don't remember exactly how much. If the I understand that there was a \$200,000 or approximately rewiring project that had been on the books for a while, and that had not been done.

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

```
    seals in the conduits between the -- that vault and the
    pump room, would it not have been within your
    authority, without a major capital project, to simply
    install the seals?
```

THE WITNESS: It would have been within my spending authority of the thousand dollars, but the project was started in 2004.

And Administrator Wallace's office was one hundred percent responsible for the reconductoring (phonetic) the project. They did all the specs. They did all of the inspections. Basically it was hands off for the operation staff. Administrator Wallace -- Administrator Wallace's company was totally responsible for the reconductoring project.

MR. JOHNSTON: So are you testifying then that you as superintendent didn't do anything about the seals because you figured eventually the project would get done, and the seals would be taken care of then?

THE WITNESS: No, that is not my testimony.

MR. JOHNSTON: I'm just -- then maybe you can explain to me a little better.

THE WITNESS: Sure. My testimony was I had informed my direct superior on many previous occasions. I sent e-mails with pictures. I spoke to the board of directors about it, and I told them of the necessity.

MS. THORME: Thoma. MR. YOUNG: Thoma.

3 MR. JOHNSTON: Pardon me?

4 MS. MACEDO: Thoma.
5 MR. YOUNG: Thoma.
6 MR. JOHNSTON: Thom

MR. JOHNSTON: Thoma, I'm sorry.

The first witness, Mr. Thoma, testified that the reconductoring project just involved replacing wires, and then even had those wires been pulled, the electrician would not necessarily have -- they would have noted that no seals were present, because they would have been able to pull the wire through. But because they didn't know the routing of the wires, that they would not have necessarily known that the seals were necessary.

And your testimony is the first that we have heard today that indicates that the District was aware of the problem of a lack of seals between the vault and the pump room, which, by anybody's account, no matter how you sequence the events that led to this, is pretty much the critical question, or it appears to be.

So -- but it is your testimony then that
the -- specifically the discussion had happened with
Mr. Wallace and with the board, that there was a lack

Page 298

Page 300

And it's not just an 8- or 900-dollar fix on these three conduits. The whole conductor system of the plant was in a state of disrepair.

So it was my viewpoint that this is a project that I informed my direct supervisor on a regular basis of the critical necessity to have it fixed. It had been going on for years, but it was above my spending limit. And the actual -- I saw the invoices from UC electric to do the reconductoring project, to do the headworks area and it was \$38,000. It wasn't \$700 or \$800. It was much, much more that was involved in this project than just putting in sealants.

And that is why when it was labeled as a reconductoring project -- when it was first labeled back in 2004, it was an electrical system upgrade, and that included pull boxes, seals, conduit. So it wasn't really part of the assignment that my direct supervisor, Mr. Wallace, had given me. He had made it plain and clear that his staff was going to deal with it.

MR. JOHNSTON: Well, I'm particularly interested in this question because the budget item that we looked at mentioned reconductoring, and the first witness, Mr. Thorme (sic) -- was that his name?

Page 299

of seals in those conduits?
THE WITNESS: Yes, sir.

MR. JOHNSTON: Okay. Next, perhaps you can
explain to me this. There has been testimony that the
reconductoring project was on the major budget items
list year after year from 2004, 2005 on until the
incident. And I guess what I -- I don't understand in
any detail how the budgeting process works in the
District.

Would it be normal that there would be many more items on the -- that that list was kind of a wish list, and that it would be normal that only a limited number then would be funded at any given year? Or was that a list of urgent items in as many -- you know, and most of them -- can you give me some sense of that?

THE WITNESS: Well, my information of the budgeting process was myself and my staff members would meet around budget time with the administrator and his representatives. We would talk about carryover items that were left over from the previous year's budget, such as reconductoring. And then we would also suggest new projects or new pieces of equipment that we thought of. And it was during this discussion process, the group discussion that a sense of priority about each

TRANSCRIPT OF HEARING

individual item could be labeled, so to speak.

It was an annual topic of discussion, the pull boxes. And not just this pull box at the plant, but all of the pull boxes at the plant. This isn't the only pull box that is in this type of condition that is below grade and has the possibility of flooding.

So every year during the major budgeting process, this would be discussed. Typically the board of directors would visit the plant around budget time and actually have a site visit. We actually took the board of directors out into the plant, opened up the pull boxes and showed them the bad shape that the wiring and the hangars, the groundwater intrusion from the cracks of the concrete.

So both Administrator Wallace, and all of the board of directors had at least an annual experience to come to the plant -- an annual opportunity to come to the plant and view the things on the major item list. And this was done almost every year with the pull box issue.

MR. JOHNSTON: Okay. So you refer to it as a carryover item. In other words, an item that was in the budget that had not been done and would sort of flop over to the next year?

THE WITNESS: That's correct.

1 MR. JOHNSTON: So what you're saving is that 2 was actually in each of those budgets an approved -- in 3 your understanding at least, it was an approved item. It was not just something on the wish list that didn't 5 make it to the list of what got done. It was an 6 approved item that was not done; is that correct? 7 THE WITNESS: That is correct. 8

MR. JOHNSTON: Okay. That's helpful.

9 Next, the -- you testified that this 10 particular pull box, before the plant operation staff 11 raised the level of the vault by six inches or so, 12 would -- subsequent to the San Simeon earthquake and

13 the regrading, that this particular pull box would end 14 up at the bottom of a puddle basically, after rain

15 events; is that correct?

16

23

24

25

THE WITNESS: No, that is not correct.

17 MR. JOHNSTON: Okay.

18 THE WITNESS: After the San Simeon earthquake 19 incident, the flood wall around the headworks was 20 rebuilt. The old one demolished. The blacktop was 21 ripped out. Ten feet away from the structure, a new 22 wall was built and a new base and asphalt was laid 23 around the entire headworks structure, which radically

24 changed the grading of the area. 25 And unfortunately, all the water backed

Page 302

Page 304

MR. JOHNSTON: And were there a large of number of carryover items each year or -- I'm just trying to get a sense or if this major projects -- major budget -- I don't want to use the wrong term -- major budget items on the list was an expansive list from which a limited number of projects were selected each year, or if it was a list of stuff that really needed to be done and virtually all of it got done every year, and these pull boxes kept getting pushed back?

THE WITNESS: I think it was a combination of both. I think there were high-priority critical items that were included in the list, and then I think there were also wish-list items that it would be great if we got it someday.

But the thing about the budget that I think is important is that once District staff, operation staff and John Wallace's staff came up with a list, it was presented to the District board of directors, to our local politicians, and they approved that budget.

So in essence, from that point forward, when the politicians approved that item, and it was published in that year's budget, it is an approved item. It is not a wish list. It is an item that needs to be done.

Page 303

1 into the headworks area, rather than having slipped 2 away to cite drains. So it was after the San Simeon 3 earthquake. 4

MR. JOHNSTON: Right. And then so from approximately -- and approximately when was it then that that work was completed?

THE WITNESS: I want to say that that was at the end of 2006, the first part of 2007, when the new flood wall was built.

And that was when I, very shortly thereafter, sent a very detailed memo to administrator Wallace, voicing my concerns about the pull box, and pointing out that the main motor leads for the influent pumps ran through that pull box, and that it was now at a low spot where water could enter it. And I think I specifically pointed out that this has the possibility to cause influent pump failure.

MR. JOHNSTON: Okay. So there was a three-year period then from the time that that project, the regrading and the flood wall project was completed until this incident, approximately?

THE WITNESS: Sure.

MR. JOHNSTON: Give or take. And if I understood your testimony correctly, when you had the significant rain events during that three-year period,

1	you would get ponding around the headworks?	1	spring of 2007, when it finally dried up, is when we
2	THE WITNESS: That's correct.	2	raised the box then.
3	MR. JOHNSTON: And that did I understand	3	MR. JOHNSTON: Okay. And during that winter,
4	correctly, that when that ponding occurred, that the	4	you observed that box filling?
5	top of the of this pull box would be below water?	5	THE WITNESS: We didn't no, we did not see
6	THE WITNESS: That's correct.	6	the box fill up with water.
7	MR. JOHNSTON: And now describe to me the top	7	MR. JOHNSTON: Okay.
8	of this pull box. It is not a sealed container, I	8	THE WITNESS: We did observe that the lid was
9	understand. Does it have holes in it?	9	the low spot, and that you could actually see water
10	THE WITNESS: Yes, it does.	10	pools around the big holes that led down into where the
11	MR. JOHNSTON: So did this pull box ever fill	11	conductor was.
12	up with water?	12	MR. JOHNSTON: Okay. Finally, could you just
13	THE WITNESS: Yes, it did.	13	walk me through the and I your process for making
14	MR. JOHNSTON: And did the pull box then drain?	14	that 2.5 to
15	THE WITNESS: It drained through the conduits	15	THE WITNESS: 2.5.
16	that ran down to the influent pumps. There are four,	16	MR. JOHNSTON: the 2.5 to three
17	two-inch conduits, and each of those act as a	17	million-gallon estimate?
18	passageway for all the water.	18	THE WITNESS: Absolutely.
19	Not only that the box was full with, but	19	After the spill, I was in contact with
20	all the water that kept following on the sides.	20	Mack Keeling (phonetic) of the local water quality, and
21	Basically, we have four big straws with water coming	21	he told me that he wanted me to prepare a spill report,
22	out and pouring out of them.	22	and one of the items that he wanted me to include was
23	MR. JOHNSTON: Now, I'm not talking about I	23	the estimate of the spill amount.
24	want to be clear. I'm not talking about the day of the	24	The way that I approached it was that I
25	incident. I'm talking the three years between this	25	looked at the plant's flow charts. We have an influent
	Page 306		Page 308
1	time this grading was completed until the time the	1	flow meter, which measures how much water is coming
2	incident took place	2	into the plant. And we also have the effluent flow
3	THE WITNESS: Well	3	meter, which measures how much water is leaving the
4	MR. JOHNSTON: did that pull box fill up at	4	plant.
5	various times during those three years?	5	The day of the spill, the influent meter
6	THE WITNESS: We did notice it immediately	6	failed at approximately 10:00. Our last known flow
7	after the headworks construction that it was definitely	7	rate was 8.4 million gallons per day. So
8	a problem, that the pull box allowed water to enter the	8	MR. JOHNSTON: And that is influent?
9	conduits. And that is why the staff put that concrete	9	THE WITNESS: That is influent.
10	berm around the lid. We raised it up, so that it was	10	Our effluent flow meter continued to work
11	no longer the low spot.	11	throughout the day. That was located in a different
12	It still was not ideal. It still was not	12	part of the plant at a different location. So we knew
13	high enough to be above a very deep puddle, but it was	13	specifically how much water we were discharging
14	enough that if we were hosing down the blacktop or when	14	throughout our outfall line.
15	we had light rain, at least this was not the drain	15	I knew that the flow rate never fell
16	spot.	16	below 8.4 million gallons per day during the flooding
17	MR. JOHNSTON: How much time elapsed between	17	period. The rainfall was immense. We were flooding
18	when the regrading was finished with the flood wall,	18	out of manholes.
19	and when you raised the box?	19	So using 8.4 as a minimum flow rate, I
20	THE WITNESS: That, I don't remember. I	20	calculated how much water was coming in, versus how
21	believe that and this is an estimate on time. I	21	much water we were pumping out. We had effluent data.
22	believe the headworks construction was finished the	22	The difference is the amount of the
23	headworks construction wall was finished in 2006.	23	spill. If you know how much is coming in, and you know
24	We noticed problems with ponding during	24	how much you're pumping out, anything that is left over
25			
23	the rainy season of 2006, 2007, and I think in the	25	has to go someplace. And that was the amount that

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

```
exited through the manhole lids, through the
                                                                 1
                                                                          THE WITNESS: (Nodding.)
2
     clean-outs, through the headwork structure, any place
                                                                 2
                                                                          DR. WOLF: And then removing the blacktop and
3
     that it could. That is how the spill happened.
                                                                 3
                                                                     then repaving. Someone must -- obviously this must
4
               That was with an estimated flow rate of
                                                                 4
                                                                     have been done with design drawings to design the
5
     8.4 million gallons per day, our last verified flow
                                                                 5
                                                                     construction of the new retaining wall, rebars for
 6
     rate. That is assuming that the flow rate never
                                                                 6
                                                                     concrete, the grading. So who was responsible for that
7
                                                                 7
     changed after that. That it had never increased. But
                                                                     design?
8
     a more realistic flow curve would have a peak flow rate
                                                                 8
                                                                          THE WITNESS: I do believe John Wallace's firm
9
     of probably closer to 10 million gallons per day.
                                                                 9
                                                                     made those designs. I'm not exactly sure about that
10
               So using those two numbers of how much
                                                                10
                                                                     though. I do know that his company performed the
11
                                                                     construction management, and were the onsite inspectors
     was coming in and how much was going out at the two
                                                                11
12
     different flow rates, I came up with a range for my
                                                                12
                                                                     while all the construction was being done.
13
     spill calculation. My range was 2.25 million gallons
                                                                13
                                                                          DR. WOLF: So it would have been the District's
14
                                                                14
     per day, if the flow rate never exceeded 8.4 million
                                                                     responsibility of assuring the -- assuring the proper
15
     gallons.
                                                                15
                                                                     design and new construction probably done by an outside
16
                                                                16
                                                                     contractor, in terms of pulling the concrete and the
               If the flow rate had indeed increased to
17
     somewhere to around 10 million gallons a day, then the
                                                                17
                                                                     asphalt.
18
     spill amount would have been closer to 3 million
                                                                18
                                                                              So it was the District's responsibility
19
     gallons.
                                                                19
                                                                     to look at the finished product and looking at the
20
                                                                20
          MR. JOHNSTON: All right. And did you take
                                                                     grading and the -- making sure that these upgrades were
21
     into account in those calculations, the 880 thousand
                                                                21
                                                                     not having unintended consequence of causing other
22
     gallons -- I think I'm getting that number right --
                                                                22
                                                                     problems, meaning the puddling of the water?
23
                                                                23
     that was pumped out to other parts of the plant and
                                                                          MR. YOUNG: Is that a question, Dr. Wolf?
24
                                                                24
                                                                          DR. WOLF: Yes. It is a long question, but it
     ultimately processed?
25
                                                                25
          THE WITNESS: Well, there are two items there.
                                                                     is a question.
                                                     Page 310
                                                                                                                     Page 312
                                                                1
     In part of the process, the sewage was pumped into the
                                                                          THE WITNESS: I'm assuming I missed something
2
                                                                 2
     holding area out in the lagoon, and it stayed there for
                                                                     in the translation there --
3
     the month that I was there. We never pumped it back to
                                                                 3
                                                                          DR. WOLF: I --
4
                                                                 4
     the plant.
                                                                          THE WITNESS: -- but I do not think it is the
5
                                                                 5
              But the hundred thousand gallons that was
                                                                     District's responsibility to make sure that the plans
6
     pumped out or whatever amount, it does not really
                                                                 6
                                                                     were right. That is the engineering company who
7
                                                                7
     matter, because we have a known flow rate. We have an
                                                                     produced the plans, and the engineering company who did
8
                                                                 8
     influent flow meter that works that measures up to 8.4
                                                                     the plant or the construction management.
9
                                                                 9
     million gallons and then it fails.
                                                                              The District as an entity or myself as a
10
                                                                10
              So we can just say it never got higher
                                                                     wastewater treatment plant operator, are not mechanical
11
     than that. Although we know it did. Let's just say it
                                                                11
                                                                     engineers or any engineers that would be able to review
12
     stayed at 8.4 million gallons. We started to pump it
                                                                12
                                                                     plans and things like that and make a judgment call.
                                                                13
13
     again at 10:00 at night. The difference between those
                                                                     That is up to the contractors who did that work.
14
     two time periods equals 2.25 million gallons of
                                                                14
                                                                          DR. WOLF: All right. So to -- I think I'm
     spilling.
                                                                15
15
                                                                     beginning to understand the picture.
16
          MR. JOHNSTON: Thank you.
                                                                16
                                                                              So basically in this instance, the design
17
          MR. YOUNG: Do you have one last question,
                                                                17
                                                                     was performed by the Wallace group, and the Wallace
                                                                18
18
     Dr. Wolf?
                                                                     group also was the -- and is, the administrator of the
19
          DR. WOLF: Yes. When in 2006 the regrading
                                                                19
                                                                     District; is that correct?
20
                                                                20
     work was done to raise the walls after the earthquake,
                                                                          THE WITNESS: That's correct.
21
     and there was some concrete work done, there was the
                                                                21
                                                                          DR. WOLF: So he serves these two functions?
                                                                22
     demolishing of the existing concrete and putting --
                                                                          THE WITNESS: That's correct.
     raising it up. I forgot how many feet you mentioned.
                                                                23
                                                                          DR. WOLF: All right. Sorry for my long
                                                                24
24
     I think it was -- was it four feet or something like
                                                                     question. Thank you.
25
     that?
                                                                25
                                                                          MR. YOUNG: Okay. I think we're done with this
```

Page 311

TRANSCRIPT OF HEARING

1	witness.	1	Basically to go about this, you know how long the spill
2	Mr. Appleton, thank you very much for	2	lasted, the time of duration. And you know how much
3	appearing today.	3	flow was coming out of your discharge point. You can
4	Okay. Your next witness. Is this your	4	estimate the volume.
5	final witness?	5	So estimating the flow, if you don't have
6	MS. MACEDO: This is the final witness.	6	a flow meter at those discharge points, which you
7	MR. YOUNG: Okay. At this juncture, I believe	7	usually don't, you can use photos or charts to get an
8	you have 55 minutes.	8	estimate of the flow or you can use tables out of the
9	MS. MACEDO: We're going to make it.	9	manholes so you can measure the height of the manhole.
10	MR. YOUNG: And the District has 67 minutes.	10	And at the end of the story, the District ended up with
11		11	their method of duration of flow at 417,000 gallons.
12	DIRECT EXAMINATION	12	So this is a chart, a flowchart, and I
13	THE WITNESS: Good afternoon.	13	will go through this step by step a little bit. It's
14	MR. YOUNG: And your name, please.	14	what is part of a method that is published by ACWEA.
15	THE WITNESS: My name is Matthew Buffleben. I	15	And so this upper left, this manhole, you can barely
16	reside in Sacramento, California, and today I'm going	16	see any water come out of it. It's five gallons per
17	to present discharge volumes, and I'm going to go over	17	minute.
18	the methods and results.	18	Probably the only reason you could
19	So I've gone through quite a bit of	19	clearly notice that there is any flow coming out of
20	detail. I will try to run through it relatively fast.	20	this manhole is during the daytime, it's bright and
21	You seem to be fairly knowledgeable, but you could ask	21	sunny, and you could see some water coming onto the
22	me questions during or afterwards, if you want to. You	22	pavement.
23	will see specific items involving graphs and charts I	23	I would like you to keep in mind that
24	will show you.	24	December 19th was a much different event. It was wet
25	MR. YOUNG: So are you a State Water Board	25	and it was rainy. It was flooding a lot. And occurred
	Page 314		Page 316
1	omployee2	1	into the evening, so there is a let of factors about
1	employee? THE WITNESS: Vec. I'm corny. I'm a State	1 2	into the evening, so there is a lot of factors about
2	THE WITNESS: Yes. I'm sorry. I'm a State	2	doing these visual observations.
2	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer	2 3	doing these visual observations. So the next slide over you have a pit
2 3 4	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in	2 3 4	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here
2	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit.	2 3	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons
2 3 4 5	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay.	2 3 4 5	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and
2 3 4 5 6	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit.	2 3 4 5 6	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and the manhole, and you can see the flow rate. You can
2 3 4 5 6 7	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay. THE WITNESS: Okay. So discharge methods and	2 3 4 5 6 7	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and
2 3 4 5 6 7 8	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay. THE WITNESS: Okay. So discharge methods and results.	2 3 4 5 6 7 8	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and the manhole, and you can see the flow rate. You can see the break coming out of the manholes there.
2 3 4 5 6 7 8 9	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay. THE WITNESS: Okay. So discharge methods and results. So estimating a spill volume. Spill	2 3 4 5 6 7 8	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and the manhole, and you can see the flow rate. You can see the break coming out of the manholes there. And as we move over to the top right
2 3 4 5 6 7 8 9	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay. THE WITNESS: Okay. So discharge methods and results. So estimating a spill volume. Spill volume, as we kind of alluded to earlier, can be	2 3 4 5 6 7 8 9	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and the manhole, and you can see the flow rate. You can see the break coming out of the manholes there. And as we move over to the top right here, you can see the flow starting to come around the
2 3 4 5 6 7 8 9 10	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay. THE WITNESS: Okay. So discharge methods and results. So estimating a spill volume. Spill volume, as we kind of alluded to earlier, can be estimated by various approaches. And the circumstances	2 3 4 5 6 7 8 9 10	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and the manhole, and you can see the flow rate. You can see the break coming out of the manholes there. And as we move over to the top right here, you can see the flow starting to come around the edge of the manhole. It's about 50 gallons of
2 3 4 5 6 7 8 9 10 11	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay. THE WITNESS: Okay. So discharge methods and results. So estimating a spill volume. Spill volume, as we kind of alluded to earlier, can be estimated by various approaches. And the circumstances of the spill will dictate which approach and which	2 3 4 5 6 7 8 9 10 11	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and the manhole, and you can see the flow rate. You can see the break coming out of the manholes there. And as we move over to the top right here, you can see the flow starting to come around the edge of the manhole. It's about 50 gallons of flow the flow is about 50 gallons per minute. And
2 3 4 5 6 7 8 9 10 11 12	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay. THE WITNESS: Okay. So discharge methods and results. So estimating a spill volume. Spill volume, as we kind of alluded to earlier, can be estimated by various approaches. And the circumstances of the spill will dictate which approach and which method is the most appropriate.	2 3 4 5 6 7 8 9 10 11 12 13	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and the manhole, and you can see the flow rate. You can see the break coming out of the manholes there. And as we move over to the top right here, you can see the flow starting to come around the edge of the manhole. It's about 50 gallons of flow the flow is about 50 gallons per minute. And you can see water coming around the circumference of
2 3 4 5 6 7 8 9 10 11 12 13	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay. THE WITNESS: Okay. So discharge methods and results. So estimating a spill volume. Spill volume, as we kind of alluded to earlier, can be estimated by various approaches. And the circumstances of the spill will dictate which approach and which method is the most appropriate. Now, there are multiple methods that may be used and there are different variations for each approach. So as an engineer, I'd like to actually	2 3 4 5 6 7 8 9 10 11 12 13 14	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and the manhole, and you can see the flow rate. You can see the break coming out of the manholes there. And as we move over to the top right here, you can see the flow starting to come around the edge of the manhole. It's about 50 gallons of flow the flow is about 50 gallons per minute. And you can see water coming around the circumference of the manhole. So as it progressed, they increased the
2 3 4 5 6 7 8 9 10 11 12 13 14	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay. THE WITNESS: Okay. So discharge methods and results. So estimating a spill volume. Spill volume, as we kind of alluded to earlier, can be estimated by various approaches. And the circumstances of the spill will dictate which approach and which method is the most appropriate. Now, there are multiple methods that may be used and there are different variations for each approach. So as an engineer, I'd like to actually approach the problems from multiple methods.	2 3 4 5 6 7 8 9 10 11 12 13 14 15	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and the manhole, and you can see the flow rate. You can see the break coming out of the manholes there. And as we move over to the top right here, you can see the flow starting to come around the edge of the manhole. It's about 50 gallons of flow the flow is about 50 gallons per minute. And you can see water coming around the circumference of the manhole. So as it progressed, they increased the flow rate from 100, and then 150, 200, 225, 250 and then 275. So I also wanted to mention that even
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay. THE WITNESS: Okay. So discharge methods and results. So estimating a spill volume. Spill volume, as we kind of alluded to earlier, can be estimated by various approaches. And the circumstances of the spill will dictate which approach and which method is the most appropriate. Now, there are multiple methods that may be used and there are different variations for each approach. So as an engineer, I'd like to actually approach the problems from multiple methods. But here we have two different	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and the manhole, and you can see the flow rate. You can see the break coming out of the manholes there. And as we move over to the top right here, you can see the flow starting to come around the edge of the manhole. It's about 50 gallons of flow the flow is about 50 gallons per minute. And you can see water coming around the circumference of the manhole. So as it progressed, they increased the flow rate from 100, and then 150, 200, 225, 250 and then 275. So I also wanted to mention that even though the photos in this chart is the maximum here of
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay. THE WITNESS: Okay. So discharge methods and results. So estimating a spill volume. Spill volume, as we kind of alluded to earlier, can be estimated by various approaches. And the circumstances of the spill will dictate which approach and which method is the most appropriate. Now, there are multiple methods that may be used and there are different variations for each approach. So as an engineer, I'd like to actually approach the problems from multiple methods. But here we have two different approaches, two general approaches, and with widely	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and the manhole, and you can see the flow rate. You can see the break coming out of the manholes there. And as we move over to the top right here, you can see the flow starting to come around the edge of the manhole. It's about 50 gallons of flow the flow is about 50 gallons per minute. And you can see water coming around the circumference of the manhole. So as it progressed, they increased the flow rate from 100, and then 150, 200, 225, 250 and then 275. So I also wanted to mention that even though the photos in this chart is the maximum here of 275, that is not the maximum out of flow out of the
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay. THE WITNESS: Okay. So discharge methods and results. So estimating a spill volume. Spill volume, as we kind of alluded to earlier, can be estimated by various approaches. And the circumstances of the spill will dictate which approach and which method is the most appropriate. Now, there are multiple methods that may be used and there are different variations for each approach. So as an engineer, I'd like to actually approach the problems from multiple methods. But here we have two different approaches, two general approaches, and with widely different estimates. So I'm going to take you through	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and the manhole, and you can see the flow rate. You can see the break coming out of the manholes there. And as we move over to the top right here, you can see the flow starting to come around the edge of the manhole. It's about 50 gallons of flow the flow is about 50 gallons per minute. And you can see water coming around the circumference of the manhole. So as it progressed, they increased the flow rate from 100, and then 150, 200, 225, 250 and then 275. So I also wanted to mention that even though the photos in this chart is the maximum here of 275, that is not the maximum out of flow out of the manhole. And that is probably what the District would
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay. THE WITNESS: Okay. So discharge methods and results. So estimating a spill volume. Spill volume, as we kind of alluded to earlier, can be estimated by various approaches. And the circumstances of the spill will dictate which approach and which method is the most appropriate. Now, there are multiple methods that may be used and there are different variations for each approach. So as an engineer, I'd like to actually approach the problems from multiple methods. But here we have two different approaches, two general approaches, and with widely different estimates. So I'm going to take you through those approaches today, and afterwards you will be able	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and the manhole, and you can see the flow rate. You can see the break coming out of the manholes there. And as we move over to the top right here, you can see the flow starting to come around the edge of the manhole. It's about 50 gallons of flow the flow is about 50 gallons per minute. And you can see water coming around the circumference of the manhole. So as it progressed, they increased the flow rate from 100, and then 150, 200, 225, 250 and then 275. So I also wanted to mention that even though the photos in this chart is the maximum here of 275, that is not the maximum out of flow out of the
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay. THE WITNESS: Okay. So discharge methods and results. So estimating a spill volume. Spill volume, as we kind of alluded to earlier, can be estimated by various approaches. And the circumstances of the spill will dictate which approach and which method is the most appropriate. Now, there are multiple methods that may be used and there are different variations for each approach. So as an engineer, I'd like to actually approach the problems from multiple methods. But here we have two different approaches, two general approaches, and with widely different estimates. So I'm going to take you through those approaches today, and afterwards you will be able to see that the District's approach was unreliable and	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and the manhole, and you can see the flow rate. You can see the break coming out of the manholes there. And as we move over to the top right here, you can see the flow starting to come around the edge of the manhole. It's about 50 gallons of flow the flow is about 50 gallons per minute. And you can see water coming around the circumference of the manhole. So as it progressed, they increased the flow rate from 100, and then 150, 200, 225, 250 and then 275. So I also wanted to mention that even though the photos in this chart is the maximum here of 275, that is not the maximum out of flow out of the manhole. And that is probably what the District would like you to believe in their calculation, but that is not the case.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay. THE WITNESS: Okay. So discharge methods and results. So estimating a spill volume. Spill volume, as we kind of alluded to earlier, can be estimated by various approaches. And the circumstances of the spill will dictate which approach and which method is the most appropriate. Now, there are multiple methods that may be used and there are different variations for each approach. So as an engineer, I'd like to actually approach the problems from multiple methods. But here we have two different approaches, two general approaches, and with widely different estimates. So I'm going to take you through those approaches today, and afterwards you will be able to see that the District's approach was unreliable and underestimated the flow, in our conclusions.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and the manhole, and you can see the flow rate. You can see the break coming out of the manholes there. And as we move over to the top right here, you can see the flow starting to come around the edge of the manhole. It's about 50 gallons of flow the flow is about 50 gallons per minute. And you can see water coming around the circumference of the manhole. So as it progressed, they increased the flow rate from 100, and then 150, 200, 225, 250 and then 275. So I also wanted to mention that even though the photos in this chart is the maximum here of 275, that is not the maximum out of flow out of the manhole. And that is probably what the District would like you to believe in their calculation, but that is not the case. So the other method
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay. THE WITNESS: Okay. So discharge methods and results. So estimating a spill volume. Spill volume, as we kind of alluded to earlier, can be estimated by various approaches. And the circumstances of the spill will dictate which approach and which method is the most appropriate. Now, there are multiple methods that may be used and there are different variations for each approach. So as an engineer, I'd like to actually approach the problems from multiple methods. But here we have two different approaches, two general approaches, and with widely different estimates. So I'm going to take you through those approaches today, and afterwards you will be able to see that the District's approach was unreliable and underestimated the flow, in our conclusions. So the District's preferred method of	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and the manhole, and you can see the flow rate. You can see the break coming out of the manholes there. And as we move over to the top right here, you can see the flow starting to come around the edge of the manhole. It's about 50 gallons of flow the flow is about 50 gallons per minute. And you can see water coming around the circumference of the manhole. So as it progressed, they increased the flow rate from 100, and then 150, 200, 225, 250 and then 275. So I also wanted to mention that even though the photos in this chart is the maximum here of 275, that is not the maximum out of flow out of the manhole. And that is probably what the District would like you to believe in their calculation, but that is not the case. So the other method MR. YOUNG: Before you continue
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	THE WITNESS: Yes. I'm sorry. I'm a State Water Resource I'm a Senior Water Resource Engineer at the Office of Enforcements, and I'm a supervisor in that unit. MR. YOUNG: Okay. THE WITNESS: Okay. So discharge methods and results. So estimating a spill volume. Spill volume, as we kind of alluded to earlier, can be estimated by various approaches. And the circumstances of the spill will dictate which approach and which method is the most appropriate. Now, there are multiple methods that may be used and there are different variations for each approach. So as an engineer, I'd like to actually approach the problems from multiple methods. But here we have two different approaches, two general approaches, and with widely different estimates. So I'm going to take you through those approaches today, and afterwards you will be able to see that the District's approach was unreliable and underestimated the flow, in our conclusions.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	doing these visual observations. So the next slide over you have a pit hole flow. In this case it's the flow meter here was a calibrated gauge, and so this was at 25 gallons per minute. So the flow is coming out of pit holes and the manhole, and you can see the flow rate. You can see the break coming out of the manholes there. And as we move over to the top right here, you can see the flow starting to come around the edge of the manhole. It's about 50 gallons of flow the flow is about 50 gallons per minute. And you can see water coming around the circumference of the manhole. So as it progressed, they increased the flow rate from 100, and then 150, 200, 225, 250 and then 275. So I also wanted to mention that even though the photos in this chart is the maximum here of 275, that is not the maximum out of flow out of the manhole. And that is probably what the District would like you to believe in their calculation, but that is not the case. So the other method

TRANSCRIPT OF HEARING

1	MR. YOUNG: I just want to know, is this an	1	down to zero.
2	exhibit?	2	Just to explain the scale and time, this
3	MS. MACEDO: Yes, it's number	3	is just over a 24-hour period and on the left-hand
4	MR. YOUNG: What	4	side, it goes from zero to MGD (phonetic).
5	THE WITNESS: Yeah, so CWE methods	5	So during the afternoon, as the District
6	MR. YOUNG: No, which exhibit would it be?	6	was successful and getting more pumps and working out
7	MS. MACEDO: I'm getting it for you.	7	the problems, getting a diesel generator, the flows
8	THE WITNESS: It's Exhibit it starts on 6	8	increase out towards the plant and reaches a maximum
9	page number 6, dash 148.	9	amount of a little over 8.5, I believe around 10
10	MR. YOUNG: So it's Exhibit 6?	10	o'clock that evening.
11	MS. MACEDO: Yes.	11	Also, we will talk about a little bit
12	THE WITNESS: Yes.	12	about the problems with the emergency diesel pump. And
13	MR. YOUNG: All right. I just wanted to make	13	these spikes, these are likely dips and indications
14	sure.	14	when they had to stop and restart the pump, and that is
15	THE WITNESS: So to continue on.	15	why I think it's so spiky here (indicating).
16	So another way, if you don't have the	16	So to calculate the flow through this
17	photos in front of you, you could measure the height of	17	period, first of all, we have to kind of look through
18	the spray coming out of the manhole. So right here is	18	the dry-weather flow. Now, the dry-weather flow
19	a manhole, and the lid is lifted up a little bit. And	19	generally has very little variation. It kind of gives
20	so if you measure this height, you can estimate the	20	us a base flow through the system. So when we look at
21	volume by going over to this table here.	21	this (indicating), we picked August and four Sundays in
22	I know it's too small to read. But it's	22	August to see what happened on a typical Sunday,
23	the height from the volume in inches, and you can look	23	without influence of rain and wet weather.
24	to find the corresponding flow rate. So measuring the	24	So here we have the chart, and it has one
25	heights of the spray coming out from the manhole, you	25	peak around noon. And I think that is just under 5
	Page 318		Page 320
	1 age 318		1 age 320
1	can get an estimate.	1	MGD, and then it has another little peak later around
2	So the prosecution's preferred method is	2	9:00, just under 4 MGD. But it's pretty regular that
	to calculate the spill volume. And it is called the	3	
3			we can use this graph-based on the efficient meter data
3	·		we can use this graph-based on the effluent meter data and the days that we average to help us determine the
4	pump station method the pump station data method.	4	and the days that we average to help us determine the
4 5	pump station method the pump station data method. When available, you use recorded flow	4 5	and the days that we average to help us determine the volume of the flow event.
4 5 6	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal	4 5 6	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather.
4 5 6 7	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just	4 5 6 7	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into
4 5 6	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal	4 5 6	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into the pipe system and the sanitary sewer system.
4 5 6 7 8	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal operations, versus what happened on the spill.	4 5 6 7 8	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into the pipe system and the sanitary sewer system. So inflow refers to water getting
4 5 6 7 8 9	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal operations, versus what happened on the spill. And our final calculations give you a	4 5 6 7 8 9	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into the pipe system and the sanitary sewer system. So inflow refers to water getting directly into the sewer system. So we have the manhole
4 5 6 7 8 9	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal operations, versus what happened on the spill. And our final calculations give you a number that cut to the chase. It's just over one	4 5 6 7 8 9	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into the pipe system and the sanitary sewer system. So inflow refers to water getting directly into the sewer system. So we have the manhole covers, and we have the pit holes within the manhole
4 5 6 7 8 9 10 11	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal operations, versus what happened on the spill. And our final calculations give you a number that cut to the chase. It's just over one million, one hundred thousand gallons.	4 5 6 7 8 9 10 11	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into the pipe system and the sanitary sewer system. So inflow refers to water getting directly into the sewer system. So we have the manhole covers, and we have the pit holes within the manhole covers. And so that is how the water gets into the
4 5 6 7 8 9 10 11 12 13	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal operations, versus what happened on the spill. And our final calculations give you a number that cut to the chase. It's just over one million, one hundred thousand gallons. So as we remember, December 19th, 2010,	4 5 6 7 8 9 10 11 12 13	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into the pipe system and the sanitary sewer system. So inflow refers to water getting directly into the sewer system. So we have the manhole covers, and we have the pit holes within the manhole covers. And so that is how the water gets into the system directly. And possible nutrients (phonetic) is
4 5 6 7 8 9 10 11 12 13	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal operations, versus what happened on the spill. And our final calculations give you a number that cut to the chase. It's just over one million, one hundred thousand gallons. So as we remember, December 19th, 2010, was not a normal day operation-wise. The day before	4 5 6 7 8 9 10 11 12 13	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into the pipe system and the sanitary sewer system. So inflow refers to water getting directly into the sewer system. So we have the manhole covers, and we have the pit holes within the manhole covers. And so that is how the water gets into the system directly. And possible nutrients (phonetic) is another common source of inflow into the system.
4 5 6 7 8 9 10 11 12 13 14 15	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal operations, versus what happened on the spill. And our final calculations give you a number that cut to the chase. It's just over one million, one hundred thousand gallons. So as we remember, December 19th, 2010, was not a normal day operation-wise. The day before had nearly three inches of rain, and there is flooding	4 5 6 7 8 9 10 11 12 13 14	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into the pipe system and the sanitary sewer system. So inflow refers to water getting directly into the sewer system. So we have the manhole covers, and we have the pit holes within the manhole covers. And so that is how the water gets into the system directly. And possible nutrients (phonetic) is another common source of inflow into the system. But we also have infiltration, and this
4 5 6 7 8 9 10 11 12 13	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal operations, versus what happened on the spill. And our final calculations give you a number that cut to the chase. It's just over one million, one hundred thousand gallons. So as we remember, December 19th, 2010, was not a normal day operation-wise. The day before had nearly three inches of rain, and there is flooding in and around the treatment plant.	4 5 6 7 8 9 10 11 12 13	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into the pipe system and the sanitary sewer system. So inflow refers to water getting directly into the sewer system. So we have the manhole covers, and we have the pit holes within the manhole covers. And so that is how the water gets into the system directly. And possible nutrients (phonetic) is another common source of inflow into the system. But we also have infiltration, and this is basically deep pipes. That is when the sanitary
4 5 6 7 8 9 10 11 12 13 14 15 16	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal operations, versus what happened on the spill. And our final calculations give you a number that cut to the chase. It's just over one million, one hundred thousand gallons. So as we remember, December 19th, 2010, was not a normal day operation-wise. The day before had nearly three inches of rain, and there is flooding in and around the treatment plant. So how do we go about estimating the	4 5 6 7 8 9 10 11 12 13 14 15 16	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into the pipe system and the sanitary sewer system. So inflow refers to water getting directly into the sewer system. So we have the manhole covers, and we have the pit holes within the manhole covers. And so that is how the water gets into the system directly. And possible nutrients (phonetic) is another common source of inflow into the system. But we also have infiltration, and this is basically deep pipes. That is when the sanitary sewer system gets older and older, and the pipes get
4 5 6 7 8 9 10 11 12 13 14 15 16	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal operations, versus what happened on the spill. And our final calculations give you a number that cut to the chase. It's just over one million, one hundred thousand gallons. So as we remember, December 19th, 2010, was not a normal day operation-wise. The day before had nearly three inches of rain, and there is flooding in and around the treatment plant. So how do we go about estimating the spill volume?	4 5 6 7 8 9 10 11 12 13 14 15 16 17	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into the pipe system and the sanitary sewer system. So inflow refers to water getting directly into the sewer system. So we have the manhole covers, and we have the pit holes within the manhole covers. And so that is how the water gets into the system directly. And possible nutrients (phonetic) is another common source of inflow into the system. But we also have infiltration, and this is basically deep pipes. That is when the sanitary sewer system gets older and older, and the pipes get cracked and broken. You have intrusion, and so you
4 5 6 7 8 9 10 11 12 13 14 15 16 17	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal operations, versus what happened on the spill. And our final calculations give you a number that cut to the chase. It's just over one million, one hundred thousand gallons. So as we remember, December 19th, 2010, was not a normal day operation-wise. The day before had nearly three inches of rain, and there is flooding in and around the treatment plant. So how do we go about estimating the spill volume? This is the data of an effluent chart	4 5 6 7 8 9 10 11 12 13 14 15 16	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into the pipe system and the sanitary sewer system. So inflow refers to water getting directly into the sewer system. So we have the manhole covers, and we have the pit holes within the manhole covers. And so that is how the water gets into the system directly. And possible nutrients (phonetic) is another common source of inflow into the system. But we also have infiltration, and this is basically deep pipes. That is when the sanitary sewer system gets older and older, and the pipes get cracked and broken. You have intrusion, and so you have additional ways and pathways of water getting into
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal operations, versus what happened on the spill. And our final calculations give you a number that cut to the chase. It's just over one million, one hundred thousand gallons. So as we remember, December 19th, 2010, was not a normal day operation-wise. The day before had nearly three inches of rain, and there is flooding in and around the treatment plant. So how do we go about estimating the spill volume? This is the data of an effluent chart from the plant. So this is the meter that was working	4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into the pipe system and the sanitary sewer system. So inflow refers to water getting directly into the sewer system. So we have the manhole covers, and we have the pit holes within the manhole covers. And so that is how the water gets into the system directly. And possible nutrients (phonetic) is another common source of inflow into the system. But we also have infiltration, and this is basically deep pipes. That is when the sanitary sewer system gets older and older, and the pipes get cracked and broken. You have intrusion, and so you have additional ways and pathways of water getting into your sanitary sewer system. So that is when we have a
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal operations, versus what happened on the spill. And our final calculations give you a number that cut to the chase. It's just over one million, one hundred thousand gallons. So as we remember, December 19th, 2010, was not a normal day operation-wise. The day before had nearly three inches of rain, and there is flooding in and around the treatment plant. So how do we go about estimating the spill volume? This is the data of an effluent chart from the plant. So this is the meter that was working throughout the storm event. And you can see in the	4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into the pipe system and the sanitary sewer system. So inflow refers to water getting directly into the sewer system. So we have the manhole covers, and we have the pit holes within the manhole covers. And so that is how the water gets into the system directly. And possible nutrients (phonetic) is another common source of inflow into the system. But we also have infiltration, and this is basically deep pipes. That is when the sanitary sewer system gets older and older, and the pipes get cracked and broken. You have intrusion, and so you have additional ways and pathways of water getting into your sanitary sewer system. So that is when we have a storm event, you will have a much greater flow during
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal operations, versus what happened on the spill. And our final calculations give you a number that cut to the chase. It's just over one million, one hundred thousand gallons. So as we remember, December 19th, 2010, was not a normal day operation-wise. The day before had nearly three inches of rain, and there is flooding in and around the treatment plant. So how do we go about estimating the spill volume? This is the data of an effluent chart from the plant. So this is the meter that was working throughout the storm event. And you can see in the morning, the flow starts increasing out of the plant	4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into the pipe system and the sanitary sewer system. So inflow refers to water getting directly into the sewer system. So we have the manhole covers, and we have the pit holes within the manhole covers. And so that is how the water gets into the system directly. And possible nutrients (phonetic) is another common source of inflow into the system. But we also have infiltration, and this is basically deep pipes. That is when the sanitary sewer system gets older and older, and the pipes get cracked and broken. You have intrusion, and so you have additional ways and pathways of water getting into your sanitary sewer system. So that is when we have a storm event, you will have a much greater flow during these storm events.
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal operations, versus what happened on the spill. And our final calculations give you a number that cut to the chase. It's just over one million, one hundred thousand gallons. So as we remember, December 19th, 2010, was not a normal day operation-wise. The day before had nearly three inches of rain, and there is flooding in and around the treatment plant. So how do we go about estimating the spill volume? This is the data of an effluent chart from the plant. So this is the meter that was working throughout the storm event. And you can see in the morning, the flow starts increasing out of the plant and peaks right up here at 8.4 at 10:26, and it	4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into the pipe system and the sanitary sewer system. So inflow refers to water getting directly into the sewer system. So we have the manhole covers, and we have the pit holes within the manhole covers. And so that is how the water gets into the system directly. And possible nutrients (phonetic) is another common source of inflow into the system. But we also have infiltration, and this is basically deep pipes. That is when the sanitary sewer system gets older and older, and the pipes get cracked and broken. You have intrusion, and so you have additional ways and pathways of water getting into your sanitary sewer system. So that is when we have a storm event, you will have a much greater flow during these storm events. I should also mention that one of the
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal operations, versus what happened on the spill. And our final calculations give you a number that cut to the chase. It's just over one million, one hundred thousand gallons. So as we remember, December 19th, 2010, was not a normal day operation-wise. The day before had nearly three inches of rain, and there is flooding in and around the treatment plant. So how do we go about estimating the spill volume? This is the data of an effluent chart from the plant. So this is the meter that was working throughout the storm event. And you can see in the morning, the flow starts increasing out of the plant and peaks right up here at 8.4 at 10:26, and it suddenly drops off. This is the evidence that we have	4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	and the days that we average to help us determine the volume of the flow event. So wet weather. We have storm weather. We have rain, and we have inflow and infiltration into the pipe system and the sanitary sewer system. So inflow refers to water getting directly into the sewer system. So we have the manhole covers, and we have the pit holes within the manhole covers. And so that is how the water gets into the system directly. And possible nutrients (phonetic) is another common source of inflow into the system. But we also have infiltration, and this is basically deep pipes. That is when the sanitary sewer system gets older and older, and the pipes get cracked and broken. You have intrusion, and so you have additional ways and pathways of water getting into your sanitary sewer system. So that is when we have a storm event, you will have a much greater flow during these storm events. I should also mention that one of the reasons why the pipes crack is earthquakes, and those
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	pump station method the pump station data method. When available, you use recorded flow data. And basically what you do is you record a normal flow day to a spill day. And the spill volume is just the difference between the two. What is the normal operations, versus what happened on the spill. And our final calculations give you a number that cut to the chase. It's just over one million, one hundred thousand gallons. You have intrusion, and so you have additional ways and pathways of water getting into your sanitary sewer system. So that is when we have a storm event, you will have a much greater flow during these storm events. I should also mention that one of the

TRANSCRIPT OF HEARING

```
1
               So this is a hydrograph. I picked this
                                                                     dry flow and the wet flow together, we come up with a,
2
     from the exhibit from the cross -- from the District.
                                                                 2
                                                                     what we feel is a reasonable amount of what should have
3
                                                                 3
                                                                     gone through the plant during the storm day. And that
     And I chose this one because it starts around when the
     rain starts to fall pretty close to early in the day.
                                                                     is this green line on top of the graph.
                                                                 5
 5
     And these bars are rainfall intensity. That is on the
                                                                              Now, Jeff Appleton, he mentioned his
 6
     right-hand side here (indicating).
                                                                 6
                                                                     calculation was 8.4, so he just basically drew a
7
                                                                 7
               And the blue line is the flow. The flow,
                                                                     straight line from 8.4 to calculate the volume and the
8
                                                                 8
     that is only due to the water, what is called rain day
                                                                     duration of the event. And he felt that it was more
9
     I and I -- rain day I and I.
                                                                 9
                                                                     reasonable that it got up to over 10 MGA to calculate
10
                                                                10
               So if you look at this chart, you can see
                                                                     the volume from there.
11
                                                                11
     that the rain peaks around 3:00 here. And then the
                                                                              We didn't use that method. We thought
12
     corresponding peak happens about 6 hours -- 5, 6 hours
                                                                12
                                                                     that the variations with the dry overflow would be
13
     later about 9:00, and then it peaks about 3 MGD.
                                                                13
                                                                     appropriate and reasonable amount. We didn't choose
14
     And so this is a height graph, and this is what we do
                                                                14
                                                                     the maximum amount to estimate the volume of the spill.
15
                                                                15
     and we use to look at rain events.
                                                                              So I'm going to back up just a second
16
               So now back to our problem of trying to
                                                                16
                                                                     here. So to calculate the spill volume, what I said
17
     estimate what is this curve. We know the plant fails.
                                                                17
                                                                     before, what would happen on a normal operation of the
18
                                                                     plant and that is the green line. And then what was
     We're trying to estimate a volume on this top part of
                                                                18
19
     the graph and come up with a reasonable estimate that
                                                                19
                                                                     actually measured going through the plant.
20
                                                                20
     you can rely on in a finding.
                                                                              So we subtract the red line during the
21
               So we have the red line, which once again
                                                                21
                                                                     spill event from the green line, to come up with what
22
                                                                22
                                                                     the spill volume is or estimate it is. So we get this
     represents the effluent out of the plant, and we have
23
                                                                23
     the blue line here that represents dry-weather flow.
                                                                     curve that looks like this (indicating).
24
                                                                24
                                                                              And so you could see the pump failed at
               So before the pump failed, we can
25
                                                                25
                                                                     10:26, and then it decreases the flow rates throughout
     actually get a good idea of what that I and I in the
                                                     Page 322
                                                                                                                     Page 324
     system is, and you will see what that is doing. In
                                                                     the day and into the evening. And so eventually it
                                                                 1
     this case, we're just going to subtract the blue line
2
                                                                 2
                                                                     goes down to zero.
     from the red line.
                                                                 3
3
                                                                              So I'm now going to throw some numbers
4
                                                                 4
                                                                     out to you. We have some decisions to make about how
              So this is what we get. We get this
5
                                                                 5
     purple line. So this is what we calculated in
                                                                     long we calculate the spill event for and what time
6
     developing our estimate. And you can see the purple
                                                                 6
                                                                     periods.
                                                                 7
7
     line increase and that is the storm. And as the day
                                                                              And so we look at the District's evidence
8
     progresses, it is going up and up, and then the pumps
                                                                 8
                                                                     and at eyewitness accounts and testimony to try to
9
                                                                 9
     fail. So we have to decide what we're going to do at
                                                                     figure out what is a reasonable time frame. So we
10
     this point.
                                                                10
                                                                     actually looked at what a ten-hour event would -- the
11
                                                                11
              And for our calculations, we decided to
                                                                     spill volume would be. And what an 11-hour event would
12
     hold the line constant for the rest of the day that we
                                                                12
                                                                     be from --
                                                                13
13
     calculated the volume flow.
                                                                          MS. THORME: Can I ask what exhibits these are
14
              Now, the reasons we did this -- Jeff
                                                                14
                                                                     in, because we have never seen these documents before.
     Appleton just spoke to this -- pumps didn't fail at the
15
                                                                15
                                                                          MS. MACEDO: These were just created for the
16
     peak. So we think we underestimated the flow,
                                                                16
                                                                     power -- these were just created for the PowerPoint.
17
     especially at the first -- in the beginning of the few
                                                                17
                                                                          THE WITNESS: Yes. And these are all data that
18
     several hours. And the second reason that we held a
                                                                18
                                                                     was provided by the District or that we had provided as
19
     constant for so long a period is because that there was
                                                                19
                                                                     our exhibits.
20
                                                                20
     flooding in the area.
                                                                          MR. YOUNG: And so this information is already
21
              And flooding is actually going to
                                                                21
                                                                     contained in one of your exhibits?
22
                                                                22
     increase the I and I. It's not a typical rain-day
                                                                          MS. MACEDO: Yes.
23
     storm event. So those were the two reasons why we kept
                                                                23
                                                                          THE WITNESS: Yes.
24
     that line horizontal for the rest of our calculations.
                                                                24
                                                                          MS. MACEDO: Yes.
25
              So adding those two lines together, the
                                                                25
                                                                          MR. YOUNG: Which one?
                                                     Page 323
                                                                                                                     Page 325
```

```
1
          THE WITNESS: It is in our --
                                                                1
                                                                     the spill. And I want to cover a little bit about the
2
                                                                2
                                                                     durational flow method, and why we find it so
          MS. MACEDO: XL.
3
                                                                3
                                                                     unreliable and inconsistent.
          THE WITNESS: -- XL spreadsheets. It should be
4
                                                                 4
     3 and 4.
                                                                              A number of other reasons is there is an
5
          MR. YOUNG: Okay. So this is just a
                                                                 5
                                                                     inherent difficulty with this method because you have
6
                                                                 6
                                                                     to really understand the discharge points, the number
     representation?
7
                                                                7
                                                                     of manholes, the residences, where there is sewage
          MS. MACEDO: Yes.
8
          THE WITNESS: Yes. I can pull up the
                                                                8
                                                                     coming out of. The flow rates that they used are
     spreadsheets, but they are not very nice to look at.
9
                                                                9
                                                                     highly suspect because there was manhole evidence that
10
          MR. YOUNG: Okay.
                                                                10
                                                                     was pretty speculative, and there was -- we believe
11
                                                                11
                                                                     they were self-serving conclusions regarding the flow
          THE WITNESS: So here is our line. This is our
12
     calculated amount of what would have gone through the
                                                                12
                                                                     out of the manhole.
13
     treatment plant for that time period. This is what was
                                                                13
                                                                              In addition to this method, it didn't
14
     measured going through the plant. So we subtracted
                                                                14
                                                                     include the storm water in the plant, which under the
                                                                15
15
     those two volumes. And then plus, we give them
                                                                     permit, the treatment plant was also supposed to treat
16
     additional credit for diverting some of the volume to
                                                                16
                                                                     the storm water.
17
     the storage, and the District had indicated that to be
                                                                17
                                                                              So the manhole survey. So we have a lot
18
     about 100,000 gallons.
                                                                18
                                                                     of discharge points. So I think 21 or so is reported
19
               So looking at these three different time
                                                                19
                                                                     in sea waste. So ideally for each manhole, you would
20
     periods for a ten-hour event, is just under a million
                                                                20
                                                                     have somebody there that would be looking at the flow.
21
     gallons and for an 11-hour event, you've got 1.3
                                                                21
                                                                     How much the flow is and how much is coming out of the
22
                                                                22
                                                                     manhole, and the time frame for what was coming in and
     million gallons.
23
                                                                23
          THE REPORTER: Excuse me, but could you please
                                                                     out of the manholes.
24
                                                                24
                                                                              Now, the District had very limited
     slow down.
25
                                                                25
          THE WITNESS: Sorry.
                                                                     operations of the manholes. So what they end up doing
                                                    Page 326
                                                                                                                    Page 328
                                                                1
               So for a ten-hour event, that is from
                                                                     is they conducted a manhole survey after the flood and
                                                                2
2
                                                                     spillover.
     12:00 noon to 10:00, you get just about a million
                                                                3
3
     gallons. For an 11-hour event, from 11:00 to 12:00,
                                                                              So to just orient yourself, I am going to
4
                                                                4
     you get about 1.3 million gallons. And for a 12-hour
                                                                     use some different terms here now. And so pit hole
5
                                                                5
                                                                     flow, which was an example from discharge about 25 GPM
     event, from say, 11:00 to 11:00, it only increases just
6
     a little bit just adding that extra hour into it, it's
                                                                 6
                                                                     and then I will talk a little bit about annular lifted
7
                                                                7
     iust over 1.3 million gallons.
                                                                     flows, which is these overflows.
8
                                                                8
               So this is where we have another decision
                                                                              So what the District does, is they went
9
                                                                9
     point in trying to figure out what our calculated
                                                                     around and took photos of all the manholes they think
10
                                                                10
     volume is.
                                                                     had this discharge. So this manhole is S2A. That is
11
                                                                11
                                                                     on the Oceano Collection System District and is located
               So in this case, we thought, based on the
12
     District's testimony, that the pumps failed at 10:26.
                                                                12
                                                                     on Aloha Place at Security Court.
13
                                                                13
     And the District estimated that the sewage -- the
                                                                              And so it was assessed to see if there
14
     overflow, there's an additional capacity within the
                                                                14
                                                                     was a pit hole flow or annular flow. So what the
                                                                15
15
     system, so that the spill probably didn't start until
                                                                     District looked at is how much dirt, grime was coming
16
     about 11:00 a.m. in the morning. But we decided we
                                                                16
                                                                     around the circumference. How much cleaning was done,
17
     would be conservative in our estimate and calculated
                                                                17
                                                                     and also indicated how many pit holes there were to try
                                                                18
18
     the volume from 12:00 p.m. to 10:00 p.m.
                                                                     to get an understanding of what type of flows were
                                                                19
19
               But noticing that there was such a big
                                                                     coming out of the manholes.
                                                                20
20
     difference between the 10 and 11 hours, we actually
                                                                              And so in this case from the flow from
21
     used an averaging technique, and so that middle column
                                                                21
                                                                     this manhole, they estimated it was about 65 gallons
22
                                                                22
     in the middle are the lines that you see in the
                                                                     per minute from the key period of 11:00 a.m. to
                                                                23
                                                                     7:00 p.m.
23
     technical reports and in the ACL come up with a final
                                                                24
24
     volume of 1.1 million gallons.
                                                                              So they looked at the other manholes, and
25
               So moving on, that is how we calculated
                                                                25
                                                                     this was one that we think they got wrong about what
```

Page 327

```
type of flow was coming out of this manhole. This was
                                                               1
                                                                        MS. MACEDO: -- he makes it -- he interviews
2
     GD4. And originally they notice that there is two pit
                                                               2
                                                                   people in the regular course of his business, and it
3
                                                               3
                                                                   was at or near the time of conducting that interview.
     hole flows. So they just indicated that the pit hole
                                                               4
     flow out of this manhole, and they estimated the flow
                                                                        MR. YOUNG: I understand, but what he is
 5
     from the key period from 11:00 to 5:00 -- 11:00 a.m. to
                                                               5
                                                                   recording in there are statements made to him by
 6
     5:00 p.m., which is 15 gallons per minute.
                                                               6
                                                                   others.
7
                                                               7
              And even still -- but if you take a
                                                                        MS. MACEDO: Right.
8
     closer look at the photo, half of the rim on this case
                                                               8
                                                                        MR. YOUNG: Why wouldn't those be hearsay?
9
     was clean. And so for some reason, they decided to go
                                                               9
                                                                        MS. MACEDO: Those are hearsay. And then
     with a pit hole flow, even though there were
                                                              10
                                                                   people come and corroborate them, so --
11
                                                              11
                                                                        MS. THORME: That's hearsay.
     indications that there was a large flow that came out
12
     of this manhole.
                                                              12
                                                                        MS. MACEDO: -- that is the best we can do.
13
                                                              13
                                                                        MS. THORME: Our objection is that those people
              In another instance, this is actually a
14
     clean-out on the Oceano system. That is clean-out S2B
                                                              14
                                                                   could have been brought in as witnesses, and we would
     on Security Court. So when the District did their
15
                                                              15
                                                                   be able to cross-examine and ask questions of them, and
16
     survey a couple of days later, they noticed the cap was
                                                              16
                                                                   they were not. And so any of those statements are
     not in place. And they talked to one of the residents,
                                                              17
                                                                   hearsay and cannot be considered as evidence in this
18
     and they said the cap was in place during the spill
                                                              18
                                                                   matter.
19
     event.
                                                              19
                                                                        MR. YOUNG: I guess they can't be considered as
20
                                                              20
              While, I'm going to look at this a little
                                                                   evidence to prove the finding that they might be used
21
     bit later at the video evidence, but we have another
                                                                   for. But hearsay is admissible, as long as it explains
22
     resident that -- well, actually, Steve, who had talked
                                                              22
                                                                   or is supplemented under testimony.
23
                                                              23
     earlier this morning, that said this manholes was
                                                                        MS. MACEDO: Right --
24
     discharging both the cap and --
                                                              24
                                                                        MR. YOUNG: I'm trying to --
25
                                                              25
                                                                        MS. MACEDO: -- it can't --
          MS. THORME: Objection; that is hearsay
                                                   Page 330
                                                                                                                 Page 332
1
     evidence.
                                                               1
                                                                         MR. YOUNG: -- look for the other testimony.
                                                               2
2
          THE WITNESS: We have an exhibit that is also
                                                                         MS. MACEDO: No, but if it is being used to
     included as part of our -- that list Steve Ervins'
3
                                                               3
                                                                    show why the prosecution team chose a factor of five
4
                                                               4
     (phonetic) testimony to this, and that is Exhibit 2.
                                                                    for the harm, then evidence -- then Exhibit 103 is not
5
                                                               5
          MS. THORME: Okay. That is also hearsay.
                                                                    being offered for the truth of the matter asserted.
6
          MR. YOUNG: Do you have any kind of a report
                                                               6
                                                                         MR. YOUNG: Any thoughts?
7
                                                               7
     that was filed as part of the agency business where
                                                                         MS. MACEDO: So Exhibit 103 can come in as a
8
     this information was put into?
                                                               8
                                                                    business record, but notwithstanding the fact that
9
                                                               9
          MS. MACEDO: Yeah. Exhibit 103 is the chart
                                                                    public residents are coming in and describing their
10
     that Jim Fischer had prepared in the course of his
                                                              10
                                                                    health concerns, because that is not evidence. I
11
     business. And it was submitted, and it has been
                                                              11
                                                                   understand that.
12
                                                              12
     declared hearsay.
                                                                             But if those statements are not being
13
          MR. YOUNG: Right.
                                                              13
                                                                    offered for the truth of the matter asserted, but as
14
          MS. MACEDO: But it was prepared as -- after he
                                                              14
                                                                    evidence for why the prosecution team considered the
15
     conducted interviews with all the residents and so to
                                                              15
                                                                    selection of the factor of five --
16
     the extent that he is available for cross-examination.
                                                              16
                                                                         MS. JAHR: They are using it to the truth of
                                                              17
17
     about what the residents said, he summarized what they
                                                                    the matter asserted.
18
     told him and put it into the record. I can't recall --
                                                              18
                                                                         MS. MACEDO: No. I mean, I'm bolstering it
19
     even if --
                                                              19
                                                                   for -- this is why we -- we were involved in the
20
          MR. YOUNG: Well, what we're perplexed about is
                                                              20
                                                                   conversations.
21
     the record itself seems to have an exception --
                                                              21
                                                                         MS. JAHR: Okav.
22
                                                              22
                                                                         MS. MACEDO: And we -- we found that the
          MS. MACEDO: Right.
23
                                                              23
          MR. YOUNG: -- as a government document?
                                                                   beneficial uses were affected for the following
          MS. MACEDO: Right. He makes --
24
                                                              24
                                                                    reasons. You don't have to agree with the
25
          MR. YOUNG: So that --
                                                              25
                                                                    conversations. You have to agree with whether our
                                                   Page 331
                                                                                                                 Page 333
```

TRANSCRIPT OF HEARING

1	recommendation of five is accurate or not.	1	and
2	MR. YOUNG: I need to take a look at Exhibit	2	MS. MACEDO: Yes.
3	103.	3	MR. YOUNG: This is 103.
4	MS. MACEDO: No problem. Do you want me to	4	Jessica, did you want to go ahead and
5	bring it up?	5	describe what we have decided on this exhibit?
6	(Brief pause in proceedings.)	6	MS. JAHR: Sure. So the objection is hearsay,
7	MS. JAHR: I have it right here.	7	and there is actually two levels of hearsay in this
8	(Discussion held off the record.)	8	document. There is the document itself, and then there
9	MR. YOUNG: Let's go back on the record.	9	is the statement.
10	We're just trying to figure out how long	10	The document itself could come in as a
11	we're going to go and whether we will take a dinner	11	business record or an official record. The second
12	break, or whether when we complete deliberations	12	level of hearsay are those statements, and those do not
13	tonight. It's kind of a logistical thing. We're not	13	have a hearsay exception.
14	quite sure.	14	MS. MACEDO: Okay.
15	And at a minimum, I would like to finish	15	MS. JAHR: And so those will be considered
16	all of the witnesses' testimony, and see what time it	16	hearsay, and then therefore, for the board's
17	is. And if it is too late, we might stop, and the	17	edification, hearsay statements can't be used as a sole
18	board will have to deliberate at a later point in time.	18	source for any finding. And so they can be used to
19	If we have enough time, then the board will go into a	19	support other evidence. But they can't be used as the
20	closed session and deliberate.	20	sole source of any finding.
21	Most of us are willing to spend most of	21	So we will allow this in, the document
22	the night to get that finished, so we just need to see	22	itself. But the hearsay statement within them or
23	what happens.	23	the statements within them by other people, will be
24	I do have a couple of housekeeping items.	24	considered hearsay.
25	I do have a testimony card from Mr. Nichols, and he is	25	MS. MACEDO: And that's fine. I mean, when I
	Page 334		Page 336
	1 46 00 1		1450000
1	the board chairman of the Sanitary (sic) District.	1	mentioned earlier about the prosecution team's
2	MS. MACEDO: Sanitation District.	2	selection of the harm factor, that is not the only
3	MR. YOUNG: Sanitation District. Not sanitary?	3	selection or the only evidence that we used to
4	Sanitation.	4	choose the harm factor. And that ruling is acceptable,
5	Okay. And I'm not going to let him	5	and I mean, we don't contest it.
6	testify as a public comment speaker, and the reason is	6	MR. YOUNG: Okay. And Ms. Thorme?
7	he's the head of the District. He's got inside	7	MS. THORME: I'm sorry, what was the question?
8	information. I'm concerned he may say things that	8	MR. YOUNG: Do you have any comments on how
9	inadvertently contradict what other witnesses have	9	we're ruling on this exhibit?
10	said. And it's going to be difficult for the other	10	MS. THORME: No.
11	side if they can't cross-examine him. And it just	11	MR. YOUNG: Okay.
12	makes it clean if he just does not testify.	12	MS. JAHR: It's 103.
13	If he wanted to testify as a witness,	13	MR. YOUNG: 103.
14	that would be different. Then he could testify that	14	MS. MACEDO: Thank you.
15	way, but not as a member of the public. So he is going	15	MR. YOUNG: Moving right along.
16	to be excluded as a witness.	16	MS. MACEDO: I'm sorry.
17	Now, as to the document that we have got,	17	THE WITNESS: So let me back up a little bit.
18	Jessica, this was document 103.	18	So these the point of these couple of
19	MS. JAHR: It's 103, yes.	19	slides is the District didn't have observations, for
20	MR. YOUNG: So here's	20	the most part, or eyewitnesses on the 20 different
21	MR. JOHNSTON: Is it this one (indicating)?	21	manholes for the 10 hours, 11 hours of the spill. The
22	MR. YOUNG: No.	22	spill happened during flood conditions and at night
23	MS. JAHR: No. Sorry, 103 is not quite it's	23	partially. And so they are relying on this post-flood,
24	a spreadsheet type document.	24	post-spill manhole survey.
25	MR. YOUNG: This let's put it on the screen	25	And so the point I'm trying to get across
	Page 335		Page 337

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

```
here is this survey is speculative in nature. And the
                                                                      you can see, this hole is totally underwater. Probably
2
     first manhole, they probably got right. The second
                                                                  2
                                                                      about a foot of water so you see a lot of disturbance
3
                                                                  3
     manhole, they said it was just a pit hole flow. I
                                                                      on the surface.
                                                                  4
     think we disagree with that conclusion.
                                                                               So the District couldn't use the photo,
5
                                                                  5
              This clean-out, they said with the
                                                                      so they are not using that method or they couldn't use
6
     survey, that there was no flow from this clean-out.
                                                                  6
                                                                      the table method. So in this case, I looked at the --
7
                                                                  7
     And I'm going to show you in a few slides later, that
                                                                      it said -- um, it just used the maximum value of the
8
                                                                 8
     there was flow coming out of the manhole. And that was
                                                                      table -- of the photo, which was -- as I mentioned
9
     actually from some resident testimony also under
                                                                 9
                                                                      before, was 275 gallons per minute during this time
                                                                 10
10
     hearsay, also corroborates that. So that was the point
                                                                      frame.
                                                                 11
11
     of these slides.
                                                                               However, if you look at the table, since
12
              So moving along. Flow rates. So the
                                                                 12
                                                                      the table -- since the District didn't use the table in
                                                                 13
13
     duration of flow method, they have to choose a flow
                                                                      other measurements, they used the same method they used
14
     rate. And the District has a tendency to choose the
                                                                 14
                                                                      at eight inches, that would be over 420 gallons per
                                                                 15
                                                                      minute out of this manhole. So the District
15
     lower value of either the photo or the table. So let's
                                                                 16
16
     look at this a little bit closer to give you examples.
                                                                      consistently picks the lower value out of the two
17
              So this is a photo from the District. It
                                                                 17
                                                                      different systems.
                                                                 18
18
     was at 2:30 in the afternoon during the spill. So not
                                                                               The next one -- this is the clean-out.
19
     during the peak spill period. It is a location -- let
                                                                 19
                                                                      Now, the District presented this video evidence, and
20
                                                                 20
     me catch up here.
                                                                      they did claim there was no discharge at this point.
21
                                                                 21
              It is TR13B on North Spring Drive. So if
                                                                      This is from a video screen shot from KSBY as part of
22
                                                                 22
                                                                      Exhibit 116, I want to say.
     you look at this photo, you can see some pit hole flow
                                                                 23
23
     coming out of it. And the pit hole flow would go back
                                                                           MS. MACEDO: 106.
24
     to the previous chart, probably resembles more closely
                                                                 24
                                                                           THE WITNESS: 106.
25
                                                                 25
                                                                               If you look at the corner -- and it's
     to the 25.
                                                     Page 338
                                                                                                                      Page 340
               However, the District used the table to
                                                                  1
                                                                      circled in red -- there is clear disturbance. And
2
     estimate the height and they estimated a flow during
                                                                  2
                                                                      there's only about three seconds of the video on this
3
                                                                      news clip, but there is a fair amount of disturbance on
     this key time period from 11:00 to 5:00, was 15 gallons
                                                                  3
4
                                                                  4
     per minute. So that is an underestimation. And --
                                                                      the corner of this screen.
5
                                                                  5
     well, here is the photo of the pit hole flow again.
                                                                                And like we said, with the residence that
6
               The next photo, this is the manhole that
                                                                  6
                                                                      the cap and the pipe valve was off, and it's pretty
7
                                                                  7
     is underwater. This manhole is just down the street.
                                                                      clear that there was discharge at this point.
8
                                                                  8
     It's one of the key manholes. It's probably one of the
                                                                                So the District missed it on the manhole
9
                                                                  9
     larger discharge points of the manholes. It's GP13 on
                                                                      survey, and then they just assumed it was a pit hole
10
     the corner of North Spring Avenue.
                                                                 10
                                                                      flow anyways. Well, this is a pipe flow. It's a
11
                                                                 11
           MS. JAHR: Can I just clarify?
                                                                      four-inch-diameter pipe, and it is discharging at this
12
          THE WITNESS: Yes.
                                                                 12
                                                                      point. So it is going to be much larger than what they
13
          MS. JAHR: Are these exhibits in evidence?
                                                                 13
                                                                      estimated at this point.
14
          THE WITNESS: Yes.
                                                                 14
                                                                                So let's talk about additional
15
          MS. MACEDO: Yes.
                                                                 15
                                                                      discharge -- additional discharge points that the
16
          THE WITNESS: This is from Exhibit 4110.
                                                                 16
                                                                      District may or may not have missed.
17
                                                                 17
          MS. JAHR: 4110?
                                                                                So we have the headworks that
18
          THE WITNESS: Yes.
                                                                 18
                                                                      Mr. Appleton talked about earlier today, and I will
19
                                                                 19
          MS. JAHR: Thank you.
                                                                      cover that in a minute.
20
                                                                 20
          MS. MACEDO: Just mention the dates from now
                                                                                We have some residence homes and some
21
                                                                 21
                                                                      additional manholes, too. I won't talk about the --
     on.
22
                                                                 22
          THE WITNESS: Okay. The date is 4-1-10.
                                                                      too much about the additional manholes, but there
23
               So it's located on North Spring.
                                                                 23
                                                                      were -- when we looked at the maps and the elevations
24
                                                                 24
                                                                      of the manholes, it looks like the District missed at
     Hopefully, I will get the name correct.
25
               This photo is taken about 2:30. So as
                                                                 25
                                                                      least one manhole, and it didn't evaluate that

TRANSCRIPT OF HEARING

1	discharge.	1	authenticate the photo.
2	So this is a photo that was that Jeff	2	MS. MACEDO: You produced the photo for us.
3	Appleton testified about earlier, and this is at the	3	It's a statement against interest.
4	headworks. And he testified that there was flow coming	4	THE WITNESS: The resident also gave testimony
5	out of this gate.	5	as part of Exhibit 103, too.
6	We didn't know about this. The District	6	MR. YOUNG: Hang on one second.
7	didn't tell us about this. So we don't really have an	7	(Discussion held off the record.)
8	estimate for how much flow was coming out of it.	8	MR. YOUNG: I have some questions go ahead,
9	But if you have six or eight inches of	9	Jessica or well, okay. The two claims the
10	water coming out of this open door, that is a very	10	District claims also each of the homes was recovered,
11	large volume. I can't confirm 700,000 gallons because	11	is that the District's statement?
12	I need to know what the time frame was, and how long it	12	MS. MACEDO: The photograph was submitted to
13	was flowing at that rate, but I am willing to say that	13	us
14	if that water level was that high, it is very	14	MR. YOUNG: I understand.
15	substantial.	15	MS. MACEDO: in evidence by the District.
16	So the residents' homes there is some	16	MR. YOUNG: I understand that.
17	sewage in the homes. And so for three locations	17	MS. MACEDO: Okay.
18	MS. THORME: I want to object.	18	MR. YOUNG: But the interpretation of what is
19	MR. YOUNG: Hold on.	19	in the photograph?
20	THE WITNESS: there is	20	MS. MACEDO: It can be done by either party.
21	MR. YOUNG: Hold on.	21	I'm telling you
22	MS. THORME: I want to object to this line of	22	MR. YOUNG: No
23	testimony, because there is no evidence to support	23	MS. MACEDO: what we say.
24	this. This is hearsay evidence.	24	MR. YOUNG: Okay. You're telling us, but what
25	MS. MACEDO: That is not entirely correct. If	25	the statements are on there, the District claims all
	Page 342		Page 344
1	we go to a slide after this, there is a photograph	1	sewage in the homes was recovered.
2	submitted by the District.	2	MS. MACEDO: That is a statement from a
3	THE WITNESS: This slide, yes.	3	document that the District submitted to us, and we can
4	MR. YOUNG: Why don't you give us that.	4	pull that up.
5	THE WITNESS: Okay.	5	MR. YOUNG: Is that true?
6	MR. YOUNG: Why don't you give us that first.	6	MS. MACEDO: Yes, that is in evidence.
7	THE WITNESS: Okay.	7	MR. YOUNG: I'm asking Ms. Thorme.
8	MR. YOUNG: The evidence to support that slide,	8	MS. THORME: I'm not sure what document she's
9	lable and that Cost	9	
10	let's see that first.	1	talking about. So
	THE WITNESS: So this slide is from Bates	10	MR. YOUNG: Well, I'm just
11	THE WITNESS: So this slide is from Bates number 2943. And this photo is not the best photo, but	10 11	MR. YOUNG: Well, I'm just MS. THORME: if she can pull up the
11 12	THE WITNESS: So this slide is from Bates number 2943. And this photo is not the best photo, but it is a photo from the resident's home. And I will	10 11 12	MR. YOUNG: Well, I'm just MS. THORME: if she can pull up the underlying document that supports that statement, that
11 12 13	THE WITNESS: So this slide is from Bates number 2943. And this photo is not the best photo, but it is a photo from the resident's home. And I will take a few minutes to look at it. This is a bathtub in	10 11 12 13	MR. YOUNG: Well, I'm just MS. THORME: if she can pull up the
11 12 13 14	THE WITNESS: So this slide is from Bates number 2943. And this photo is not the best photo, but it is a photo from the resident's home. And I will take a few minutes to look at it. This is a bathtub in the back of the bathroom, and there is sewage in the	10 11 12 13 14	MR. YOUNG: Well, I'm just MS. THORME: if she can pull up the underlying document that supports that statement, that would be fine. MS. MACEDO: You bet.
11 12 13 14 15	THE WITNESS: So this slide is from Bates number 2943. And this photo is not the best photo, but it is a photo from the resident's home. And I will take a few minutes to look at it. THORME: if she can pull up the underlying document that supports that statement, that would be fine. MS. MACEDO: You bet. THE WITNESS: It's 29, page 43 is the photo and
11 12 13 14 15 16	THE WITNESS: So this slide is from Bates number 2943. And this photo is not the best photo, but it is a photo from the resident's home. And I will take a few minutes to look at it. This is a bathtub in the back of the bathroom, and there is sewage in the bathtub. You can tell by the gray water. MR. YOUNG: And who took the photograph?	10 11 12 13 14 15 16	MR. YOUNG: Well, I'm just MS. THORME: if she can pull up the underlying document that supports that statement, that would be fine. MS. MACEDO: You bet. THE WITNESS: It's 29, page 43 is the photo and the e-mail is page 2.
11 12 13 14 15 16	THE WITNESS: So this slide is from Bates number 2943. And this photo is not the best photo, but it is a photo from the resident's home. And I will take a few minutes to look at it. This is a bathtub in the back of the bathroom, and there is sewage in the bathtub. You can tell by the gray water. MR. YOUNG: And who took the photograph? THE WITNESS: The resident.	10 11 12 13 14 15 16 17	MR. YOUNG: Well, I'm just MS. THORME: if she can pull up the underlying document that supports that statement, that would be fine. MS. MACEDO: You bet. THE WITNESS: It's 29, page 43 is the photo and the e-mail is page 2. MS. JAHR: And it is the page beforehand, and
11 12 13 14 15 16 17 18	THE WITNESS: So this slide is from Bates number 2943. And this photo is not the best photo, but it is a photo from the resident's home. And I will take a few minutes to look at it. This is a bathtub in the back of the bathroom, and there is sewage in the bathtub. You can tell by the gray water. MR. YOUNG: And who took the photograph? THE WITNESS: The resident. MR. YOUNG: And when was it taken?	10 11 12 13 14 15 16 17	MR. YOUNG: Well, I'm just MS. THORME: if she can pull up the underlying document that supports that statement, that would be fine. MS. MACEDO: You bet. THE WITNESS: It's 29, page 43 is the photo and the e-mail is page 2. MS. JAHR: And it is the page beforehand, and prior to that, there's an e-mail saying that the SSO
11 12 13 14 15 16 17 18	THE WITNESS: So this slide is from Bates number 2943. And this photo is not the best photo, but it is a photo from the resident's home. And I will take a few minutes to look at it. This is a bathtub in the back of the bathroom, and there is sewage in the bathtub. You can tell by the gray water. MR. YOUNG: And who took the photograph? THE WITNESS: The resident. MR. YOUNG: And when was it taken? THE WITNESS: During the flooding event, the	10 11 12 13 14 15 16 17 18	MR. YOUNG: Well, I'm just MS. THORME: if she can pull up the underlying document that supports that statement, that would be fine. MS. MACEDO: You bet. THE WITNESS: It's 29, page 43 is the photo and the e-mail is page 2. MS. JAHR: And it is the page beforehand, and prior to that, there's an e-mail saying that the SSO report has been certified in those homes.
11 12 13 14 15 16 17 18 19 20	THE WITNESS: So this slide is from Bates number 2943. And this photo is not the best photo, but it is a photo from the resident's home. And I will take a few minutes to look at it. This is a bathtub in the back of the bathroom, and there is sewage in the bathtub. You can tell by the gray water. MR. YOUNG: And who took the photograph? THE WITNESS: The resident. MR. YOUNG: And when was it taken? THE WITNESS: During the flooding event, the spill day, and it was given to the District. And the	10 11 12 13 14 15 16 17 18 19 20	MR. YOUNG: Well, I'm just MS. THORME: if she can pull up the underlying document that supports that statement, that would be fine. MS. MACEDO: You bet. THE WITNESS: It's 29, page 43 is the photo and the e-mail is page 2. MS. JAHR: And it is the page beforehand, and prior to that, there's an e-mail saying that the SSO report has been certified in those homes. MS. MACEDO: Yes. I hope this is not being
11 12 13 14 15 16 17 18 19 20 21	THE WITNESS: So this slide is from Bates number 2943. And this photo is not the best photo, but it is a photo from the resident's home. And I will take a few minutes to look at it. This is a bathtub in the back of the bathroom, and there is sewage in the bathtub. You can tell by the gray water. MR. YOUNG: And who took the photograph? THE WITNESS: The resident. MR. YOUNG: And when was it taken? THE WITNESS: During the flooding event, the spill day, and it was given to the District. And the District submitted it to us as evidence as part of	10 11 12 13 14 15 16 17 18 19 20 21	MR. YOUNG: Well, I'm just MS. THORME: if she can pull up the underlying document that supports that statement, that would be fine. MS. MACEDO: You bet. THE WITNESS: It's 29, page 43 is the photo and the e-mail is page 2. MS. JAHR: And it is the page beforehand, and prior to that, there's an e-mail saying that the SSO report has been certified in those homes. MS. MACEDO: Yes. I hope this is not being charged against our time.
11 12 13 14 15 16 17 18 19 20 21 22	THE WITNESS: So this slide is from Bates number 2943. And this photo is not the best photo, but it is a photo from the resident's home. And I will take a few minutes to look at it. This is a bathtub in the back of the bathroom, and there is sewage in the bathtub. You can tell by the gray water. MR. YOUNG: And who took the photograph? THE WITNESS: The resident. MR. YOUNG: And when was it taken? THE WITNESS: During the flooding event, the spill day, and it was given to the District. And the District submitted it to us as evidence as part of their exhibits. And this is shown in their exhibit on	10 11 12 13 14 15 16 17 18 19 20 21 22	MR. YOUNG: Well, I'm just MS. THORME: if she can pull up the underlying document that supports that statement, that would be fine. MS. MACEDO: You bet. THE WITNESS: It's 29, page 43 is the photo and the e-mail is page 2. MS. JAHR: And it is the page beforehand, and prior to that, there's an e-mail saying that the SSO report has been certified in those homes. MS. MACEDO: Yes. I hope this is not being charged against our time. MS. JAHR: No, this is an objection. There is
11 12 13 14 15 16 17 18 19 20 21 22 23	THE WITNESS: So this slide is from Bates number 2943. And this photo is not the best photo, but it is a photo from the resident's home. And I will take a few minutes to look at it. This is a bathtub in the back of the bathroom, and there is sewage in the bathtub. You can tell by the gray water. MR. YOUNG: And who took the photograph? THE WITNESS: The resident. MR. YOUNG: And when was it taken? THE WITNESS: During the flooding event, the spill day, and it was given to the District. And the District submitted it to us as evidence as part of their exhibits. And this is shown in their exhibit on 2943.	10 11 12 13 14 15 16 17 18 19 20 21 22 23	MR. YOUNG: Well, I'm just MS. THORME: if she can pull up the underlying document that supports that statement, that would be fine. MS. MACEDO: You bet. THE WITNESS: It's 29, page 43 is the photo and the e-mail is page 2. MS. JAHR: And it is the page beforehand, and prior to that, there's an e-mail saying that the SSO report has been certified in those homes. MS. MACEDO: Yes. I hope this is not being charged against our time. MS. JAHR: No, this is an objection. There is no time for the verbatim part.
11 12 13 14 15 16 17 18 19 20 21 22 23 24	THE WITNESS: So this slide is from Bates number 2943. And this photo is not the best photo, but it is a photo from the resident's home. And I will take a few minutes to look at it. This is a bathtub in the back of the bathroom, and there is sewage in the bathtub. You can tell by the gray water. MR. YOUNG: And who took the photograph? THE WITNESS: The resident. MR. YOUNG: And when was it taken? THE WITNESS: During the flooding event, the spill day, and it was given to the District. And the District submitted it to us as evidence as part of their exhibits. And this is shown in their exhibit on 2943. MS. THORME: But the photo is still hearsay	10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	MR. YOUNG: Well, I'm just MS. THORME: if she can pull up the underlying document that supports that statement, that would be fine. MS. MACEDO: You bet. THE WITNESS: It's 29, page 43 is the photo and the e-mail is page 2. MS. JAHR: And it is the page beforehand, and prior to that, there's an e-mail saying that the SSO report has been certified in those homes. MS. MACEDO: Yes. I hope this is not being charged against our time. MS. JAHR: No, this is an objection. There is no time for the verbatim part. MR. JEFFRIES: It's our time.
11 12 13 14 15 16 17 18 19 20 21 22 23	THE WITNESS: So this slide is from Bates number 2943. And this photo is not the best photo, but it is a photo from the resident's home. And I will take a few minutes to look at it. This is a bathtub in the back of the bathroom, and there is sewage in the bathtub. You can tell by the gray water. MR. YOUNG: And who took the photograph? THE WITNESS: The resident. MR. YOUNG: And when was it taken? THE WITNESS: During the flooding event, the spill day, and it was given to the District. And the District submitted it to us as evidence as part of their exhibits. And this is shown in their exhibit on 2943.	10 11 12 13 14 15 16 17 18 19 20 21 22 23	MR. YOUNG: Well, I'm just MS. THORME: if she can pull up the underlying document that supports that statement, that would be fine. MS. MACEDO: You bet. THE WITNESS: It's 29, page 43 is the photo and the e-mail is page 2. MS. I hope this is not being charged against our time. MS. JAHR: No, this is an objection. There is no time for the verbatim part.

TRANSCRIPT OF HEARING

Absolutely. When is the pizza getting here? MR. JEFFRIES: We are going to — MR. THORME: Well, this was — this is inserted by the District for the issue of the private sewer lateral discharges which are in the reporting issues related to that. MR. YOUNG: Folks, please hold on one second. MR. Thorme is speaking. MR. THORME: So that was rebuttal to the private sewer lateral certification document, which is no longer an issue. So to the extent that that went towards the private sewer lateral certification document, which is no longer an issue. So to the extent that that went towards the private sewer lateral discharge issue, that sourvies. MS. JAHR: Well, the nondischarge violations may not be part of the case, I'm not sure it sourvies. MS. JAHR: Well, the nondischarge wild the homes and either led to harm or there was more sewage discharge, is is that core for the previous page, and this is the text immediately after the photo. Page 346 MS. THORME: Right. So the question of where twent and what kind of harm it caused, there is not evidence of harm besides that it backed up and went back down the tub. MS. THORME: Right. So the question of where twent and what kind of harm it caused, there is not evidence of harm besides that it backed up and went back down the tub. MS. THORME: That is argument. MS. JAHR: I think at this point, in this — at this, we're looking at the study and the twent and what kind of harm it caused, there is not evidence of harm besides that it backed up and went back down the tub. MS. JAHR: This since the photo. Page 346 MS. THORME: So I font want to — MS. JAHR: This is the point. MS. JAHR: This is the point — MS. JAHR: This is the point — MS. JAHR: This is the point — MS. MACEDO: True. MS. JAHR: This is the point to the MS. JAHR: This is the point of the cape and the more of the previous page and the province and the provin			_	
MR. JFFRIES: We are going to — MR. YROMRE: Well, this was — this is inserted by the District for the issue of the private sewer releted to that. MR. YOUNG: Folks, please hold on one second. MR. YOUNG: Folks, please hold on one second. MR. YOUNG: Go ahead. MS. THORME: So that was rebuttal to the private sewer lateral discharges which are it the responsibility. MR. JOHRE: So that was rebuttal to the private sewer lateral discharge issue, that is no longer an issue. So to the extent that that went towards the private sewer lateral discharge issue, that is no longer part of the case, I'm not sure it is no longer part of the case, I'm not sure it is no longer part of the case, I'm not sure it is no longer part of the case, I'm not sure it is no longer than itself is not expert that that went is in no longer an issue. So to the extent that that went is no longer than its so income part of the case, I'm not sure it is no longer than its so income part of the case. MS. JAHR: Well, then nondischarge violations may not be part of the case. MS. MACEDO: There you go, Jessica. It's up. This is the photo of the previous page, and this is the text immediately after the photo. Page 346 MS. JAHR: Right. MS. JAHR: Right. MS. JAHR: Right. MS. JAHR: That is argument. MS. JAHR: That is the point in this — at this, we're looking at the actual amount of discharge; is that correct? What we were looking at the actual amount of discharge; is that correct? What we were looking at the actual amount of discharge; is that correct? What we were looking at the actual amount of discharge; is that correct? What we were looking at the actual amount of discharge; is that correct? What we were looking at the actual amount of discharge; is that correct? What we were looking at the actual amount of discharge; is that correct? What we were looking at the actual amount of discharge; is that correct? What we were looking at the actual amount of discharge; is	1	Absolutely. When is the pizza getting here?	1	and
MS. THORME: Well, this was – this is inserted by the District for the issue of the private sewer lateral discharges which are in the reporting issues related to that. MR. YOUNG: Folks, please hold on one second. MS. Thorme is speaking. MR. TOURG: Go ahead. MR. TYOUNG: Go ahead. MR. TYOUNG: Go ahead. MS. THORME: So that was rebuttal to the private sewer lateral certification document, which is no longer an issue. So to the extent that that went to towards the private sewer lateral certification document, which is son longer an issue. So to the extent that that went to towards the private sewer lateral discharge issue, that to wards the private sewer lateral discharge issue, that to wards the private sewer lateral discharge issue, that it was not discharge, is still part of the case. MS. JAHR: Well, the nondischarge violations may not be part of the case, I'm not sure it with the email of the case. MS. THORME: Right, but — MS. MACEDO: The protogo ph. and the action of where it went and what kind of harm it caused, there is not evidence of harm besides that it backed up and went back down the tub. MS. THORME: Right. MS. THORME: Righ				
4 by the District for the issue of the private sewer lateral cdischarges which are in the reporting issues related to that.				
Second color of the tree states of the tree state				
6 related to that. 7 MR. YOUNG: Folks, please hold on one second. 8 MS. Thorme is speaking. 9 MR. JEFFRIES: All right. 10 MR. YOUNG: Go ahead. 11 MS. THORME: So that was rebuttal to the private sewer lateral erification document, which is is no longer an issue. So to the extent that that went towards the private sewer lateral erification document, which is is no longer part of the case, I'm not sure it is no longer part of the case, I'm not sure it is no longer part of the case, I'm not sure it is no longer part of the case, I'm not sure it is no longer part of the case anymore. However, the allegations that there was discharge in the homes and either led to harm or there was more sewage discharge, is still part of the case. 10 MS. JAHR: Well, the nondischarge violations either led to harm or there was more sewage discharge, is still part of the case. 11 MS. JAHR: Right, but		•		
MR, YOUNG: Folks, please hold on one second. MR, YOUNG: Go ahead. 1 think its - at this point, it is MR, YOUNG: Go ahead. 10 mR, YOUNG: Go ahead. 10 mR, YOUNG: Go ahead. 10 mR, YOUNG: Go ahead. 11 mR, YOUNG: Are we referring to this exhibit 11 mR, YOUNG: Are we referring to this exhibit 12 private sewer lateral discharge issue, that 13 no longer an issue. So to the exhet that that went 14 towards the private sewer lateral discharge issue, that 14 towards the private sewer lateral discharge issue, that 15 is no longer part of the case, I'm not sure it 15 is no longer part of the case anymore. However, the 16 elder led to harm or there was more sewage discharge, 17 is still part of the case anymore. However, the 18 may not be part of the case anymore. However, the 19 allegations that there was discharge in the homes and 18 elder to harm or there was more sewage discharge, 20 is still part of the case. 21 is still part of the case. 21 is still part of the case. 22 is still part of the case. 22 mS, THORNE: Right, but - 23 mS, MACEDO: There you go, Jessica. It's up. 24 This is the photo of the previous page, and this is the text immediately after the photo. 24		, ,		·
MR. Thorme is speaking. MR. JEFFRIES: All right. MR. YOUNG: Go ahead. MS. THORME: So that was rebuttal to the private sewer lateral concument, which is no longer an issue. So to the extent that that went is no longer an issue. So to the extent that that went is no longer an issue. So to the extent that that went is no longer an issue. So to the extent that that went is no longer and the private sewer lateral discharge issue, that is no longer part of the case, I'm not sure it is no longer part of the case anymore. However, the all elagations that there was discharge in the homes and either led to harm or there was more sewage discharge, is still part of the case. MS. MACEDO: There you go, Jessica. It's up. This is the photo of the previous page, and this is the text immediately after the photo. Page 346 MR. YOUNG: Are we referring to this exhibit here (indicating)? MR. YOUNG: The picture. So did this picture comes with this e-mail? MR. YOUNG: Is it related at all? THE WITINESS: Yes, it is. MR. YOUNG: See, that comes that counts as an admission. MR. YOUNG: See, that comes that counts as an admission. Page 346 MS. MACEDO: There you go, Jessica. It's up. This with a photo of the previous page, and this is the text immediately after the photo. Page 346 MS. JAHR: Right. MS. JAHR: Right. MS. THORME: Right, So the question of where it was more sewage discharge, it went and what kind of harm it caused, there is not back down the tub. MS. MACEDO: Yes, but the people were exposed to it. MS. THORME: The picture. So did this picture comes with this e-mail? MR. YOUNG: The picture. So did this picture comes with this e-mail? MR. YOUNG: See, that comes that counts as an admission. MR. YOUNG: See, that comes that counts as an admission. MR. YOUNG: The e-mail is from the Wallace for ourse, which was an agent of the District, related to the District. Page 346 MS. THORME: Correct, but the objection is to the foundation of the photo MR. YOUNG: The photogograph MR. YOUNG: The photograph			1	· · · · · · · · · · · · · · · · · · ·
MR. JEFRIES: All right. MR. YOUNG: Go ahead. 10				·
MR. YOUNG: Are we referring to this exhibit MS. THORME: So that was rebuttal to the rivards sewer lateral destrication document, which is no longer an issue. So to the extent that that went towards the private sewer lateral discharge issue, that towards the private sewer lateral discharge issue, that towards the private sewer lateral discharge issue, that towards the private sewer lateral discharge is univous. MS. JAHR: Well, the nondischarge violations may not be part of the case, I'm not sure it satisfies aurives. MS. JAHR: Well, the nondischarge violations may not be part of the case anymore. However, the allegations that there was discharge in the homes and either led to harm or there was more sewage discharge, is still part of the case. MS. MACEDO: There you go, Jessica. It's up. This is the photo of the previous page, and this is the text immediately after the photo. Page 346 MS. THORME: Right. So the question of where it went and what kind of harm it caused, there is not evidence of harm besides that it backed up and went back down the tub. MS. THORME: Right. So the question of where it went and what kind of harm it caused, there is not evidence of harm besides that it backed up and went back down the tub. MS. THORME: That is argument. MS. JAHR: The picture: So did this picture ownes with this e-mail? MR. YOUNG: See, that comes that counts as an admission. MR. YOUNG: See, that comes that counts as an admission. MR. YOUNG: See, that comes that counts as an admission. MR. YOUNG: See, that comes that counts as an admission. MR. YOUNG: The picture. So did this picture ownes with this e-mail? THE WITINESS: Yes, MR. YOUNG: See, that comes that counts as an admission. MR. YOUNG: See, that comes that counts as an admission. MR. YOUNG: See, that comes that counts as an admission. MR. THORME: Correct, but the objection is to the fermion. MR. YOUNG: The picture. So did this picture ownes with this e-mail? MR. YOUNG: See, that comes that counts as an admission. MR. THORM				
MS. THORME: So that was rebuttal to the private sewer lateral certification document, which is no longer part of the case. I'm not sure it is no longer part of the case, I'm not sure it is survives.		_		
private sewer lateral certification document, which is no longer an issue. So to the extent that that went towards the private sewer lateral discharge issue, that is no longer an sissue. So to the extent that that went towards the private sewer lateral discharge issue, that is no longer an sissue. So to the extent that that went towards the private sewer lateral discharge issue, that is no longer and sissue. So to the extent that that went towards the private sewer lateral discharge issue, that is no longer part of the case, I'm not sure it is no longer and the case anymore. However, the allegations that there was discharge in the homes and either led to harm or there was more sewage discharge, in still part of the case anymore. However, the allegations that there was discharge in the homes and either led to harm or there was more sewage discharge, in still part of the case. MS. THORME: Right, but				
no longer an issue. So to the extent that that went towards the private sewer lateral discharge issue, that is no longer part of the case, I'm not sure it survives. MS. JAHR: Well, the nondischarge violations may not be part of the case anymore. However, the allegations that there was discharge in the homes and either led to harm or there was more sewage discharge, is still part of the case. MS. THORME: Right, but MS. MACEDO: True, mS. JAHR: I think at this point, in this at this, we're looking at the actual amount of discharge; is that correct? What we were looking at? MS. JAHR: I think at this point, in this at this, we're looking at the actual amount of discharge; is that correct? What we were looking at? THE WITNESS: That is correct. mS. JAHR: Nounce: The actual may be part of the case. MR. YOUNG: Is it related at all? THE WITNESS: Yes. MR. YOUNG: See, that comes that counts as an admission. MS. MACEDO: Yes. MR. YOUNG: See, that comes that counts as an admission. MS. MACEDO: True, ms. Ms. Mace may be provided the provided of the previous page, and this is the text immediately after the photo. Page 346 MS. JAHR: Right. MS. THORME: Right, So the question of where it went and what kind of harm it caused, there is not evidence of harm besides that it backed up and went back down the tub. MS. MACEDO: Yes, but the people were exposed to it. MS. THORME: That is argument. MS. JAHR: I think at this point, in this at the council of discharge; is that correct? What we were looking at? THE WITNESS: Yes. MR. YOUNG: See, that comes that counts as an admission. MS. THORME: Right. MS. THORME: Not the e-mail is from the Wallace Group, who was an agent of the District, related to the bistrict, related to the bistrict, related to the bistrict. MS. THORME: so there is no one we can see it, and yes, we can look at it, but we can't ask any que			1	` 5,
towards the private sewer lateral discharge issue, that is no longer part of the case, I'm not sure it survives. MS. JAHR: Well, the nondischarge violations may not be part of the case anymone. However, the allegations that there was discharge in the homes and either led to harm or there was more sewage discharge, is still part of the case. MS. THORME: Right, but			1	
15 is no longer part of the case, I'm not sure it 16 survives. 17 MS. JAHR: Well, the nondischarge violations may not be part of the case anymore. However, the allegations that there was discharge in the homes and either led to harm or there was more sewage discharge, is still part of the case. MS. THORME: Right, but MS. MACEDO: There you go, Jessica. It's up. This is the photo of the previous page, and this is the text immediately after the photo. Page 346 MS. JAHR: Right. MS. THORME: Right. So the question of where it went and what kind of harm it caused, there is not evidence of harm besides that it backed up and went back down the tub. MS. THORME: That is argument. MS. JAHR: I think at this point, in this at tits, we're looking at the actual amount of discharge; is that correct? What we were looking at? THE WITNESS: Charet. MS. THORME: Right. MS. THORME: Not the objection is to the foundation of the photo MS. MACEDO: True. MS. JAHR: I think at this point, in this at tits, we're looking at the actual amount of discharge; is that correct? What we were looking at? THE WITNESS: Correct. MS. THORME: Right. MS. THORME: Right. MS. THORME: Correct, but the objection is to the foundation of the photo MS. THORME: so there is no one we can see it, and yes, we can look at it, but we can't ask any questions of the homeowner of what happened and didn't happen. So I mean, this the as far as the relation to the volume issue. MS. THORME: Not have the objection is to the foundation of the photo MS. MACEDO: True. MS. MACEDO: True. MS. MACEDO: Except to the fact that the statement contained in the e-mail seems contradicted by the photo submitted by the District in the exact same document on the page before. MS. THORME: Right. MR. YOUNG: The photograph. MS. THORME: Correct, but the objection is to the foundation of the photo MS. MACEDO: True. MS. MACEDO: True. MS. MACEDO: True. MS. MACEDO: True.			1	
16 survives. MS. JAHR: Well, the nondischarge violations may not be part of the case anymore. However, the allegations that there was discharge in the homes and tither led to harm or there was more sewage discharge, is still part of the case. MS. THORME: Right, but 23 MS. MACEDO: There you go, Jessica. It's up. This is the photo of the previous page, and this is the text immediately after the photo. Page 346 MS. JAHR: Right. MS. JAHR: Right. MS. JAHR: Right. MS. THORME: Right. So the question of where it went and what kind of harm it caused, there is not evidence of harm besides that it backed up and went back down the tub. MS. MACEDO: Yes, but the people were exposed to it. MS. THORME: That is argument. MS. JAHR: T think at this point, in this at this, we're looking at the actual amount of discharge; is that correct? What we were looking at? THE WITNESS: Yes, MR. YOUNG: See, that comes that counts as an admission. MS. MACEDO: Yes. MR. YOUNG: See, that comes that counts as an admission. MS. MACEDO: Thee-mail is from the Wallace Group, who was an agent of the District. Page 348 MS. THORME: Correct, but the objection is to the foundation of the photoparaph. MS. THORME: so there is no one we can see it, and yes, we can look at it, but we can't ask any questions of the homesomer of what happened and didn't happen. So I mean, that is the as far as the relation to the volume issue. MR. YOUNG: I can't MS. JAHR: Right. MR. YOUNG: I can't MS. MACEDO: True. MS. JAHR: get the issues mixed up. MS. JAHR: get the issues mixed up. MS. JAHR: So I don't want to MS. MACEDO: True. MS. JAHR: get the issues mixed up. MS. JAHR: get the issues mixed up. MS. MACEDO: That's correct. MS. THORME: any make sure that you have got a reliable document in front of you, reliable evidence. I think if the District submitted the photograph MS. MACEDO: True in the e-mail seems contradicted by the photo submitted by the District in the exact same document on the page				
MS. JAHR: Well, the nondischarge violations may not be part of the case anymore. However, the allegations that there was discharge in the homes and either led to harm or there was more sewage discharge, is still part of the case. MS. THORME: Right, but - 22 MS. MACEDO: True				
Page 346 MS. JAHR: Right. MS. THORME: Right. So the question of where a twent and what kind of harm it caused, there is not evidence of harm besides that it backed up and went back down the tub. MS. MACEDO: Yes, but the people were exposed to it. MS. THORME: That is argument. MS. THORME: -so there is no one we can see it, and yes, we can look at it, but we can't ask any questions of the homeowner of what happened and didn't happen. So I mean, that is the as far as the relation to the volume issue. MS. JAHR: I think at this point, in this at this, we're looking at the actual amount of discharge; is that correct? What we were looking at? THE WITNESS: That is correct. MS. JAHR: At this point THE WITNESS: That's what I'm talking about. MS. JAHR: you're not arguing about harm. THE WITNESS: Correct. MS. JAHR: you're not arguing about harm. MS. JAHR: you're not arguing about. MS. MACEDO: True.				
MS. JAHR: Right. MS. THORME: Right. So the question of where it went and what kind of harm it caused, there is not evidence of harm besides that it backed up and went back down the tub. MS. MACEDO: Yes, but the people were exposed to it. MS. THORME: That is argument. MS. JAHR: I think at this point, in this at this, we're looking at the actual amount of discharge; is that correct? What we were looking at? THE WITNESS: That is correct. MS. JAHR: At this point MS. JAHR: At this point MS. JAHR: At this point MS. JAHR: So I don't want to MS. JAHR: But it was not discharged if it went back into the sewer system. That is the point. So if it didn't if it went into the tub and never went out of the tub and went right back down the drain MS. THORME: Correct, but the objection is to the foundation of the photo MR. YOUNG: The photograph. MS. THORME: so there is no one we can see it, and yes, we can look at it, but we can't ask any questions of the homeowner of what happened and didn't happen. So I mean, that is the as far as the relation to the volume issue. MR. YOUNG: Yeah MS. JAHR: Right. MR. YOUNG: Yeah MS. JAHR: Right. MR. YOUNG: Except to the fact that the statement contained in the e-mail seems contradicted by the photo submitted by the District in the exact same document on the page before. MR. YOUNG: Well, the photo should come in with the e-mail. The whole thing about the foundation and authenticity is really to make sure that you have got a reliable document in front of you, reliable evidence. I think if the District submitted the document MS. MACEDO: If the District submitted the document MS. MACEDO: I don't have any objection as to its authenticity. It's in, as long at least it's				
MS. THORME: Right. So the question of where it went and what kind of harm it caused, there is not evidence of harm besides that it backed up and went back down the tub. MS. MACEDO: Yes, but the people were exposed to it. MS. THORME: That is argument. MS. THORME: That is argument. MS. JAHR: I think at this point, in this at this, we're looking at the actual amount of discharge; is that correct? What we were looking at? THE WITNESS: That is correct. MS. JAHR: At this point THE WITNESS: That's what I'm talking about. MS. JAHR: you're not arguing about harm. THE WITNESS: Correct. MS. JAHR: So I don't want to MS. MACEDO: True. MS. JAHR: So I don't want to MS. MACEDO: True. MS. JAHR: get the issues mixed up. MS. JAHR: But it was not discharged if it went back into the sewer system. That is the point. So if it didn't if it went into the tub and never went of harm besides that it backed up and went of discharge in the evidence of harm besides that it backed up and went in the exact sane went out of the tub and went right back down the drain MS. THORME: so there is no one we can see it, and yes, we can look at it, but we can't ask any questions of the homeowner of what happened and didn't happen. So I mean, that is the as far as the relation to the volume issue. MR. YOUNG: Yeah MS. JAHR: Right. MR. YOUNG: True have can't ask any questions of the homeowner of what happened and didn't happen. So I mean, that is the as far as the relation to the volume issue. MR. YOUNG: The hontosurity as my questions of the homeowner of what happened and didn't happen. So I mean, that is the as far as the relation to the volume issue. MR. YOUNG: The homeowner of what happened and didn't happen. So I mean, that is the as far as the relation to the volume issue. MR. YOUNG: True have relation to the volume issue. MR. YOUNG: True have relation to the volume issue. MR. YOUNG: True have relation to the volume issue. MR. YOUNG: Well have relation to the page before. MR. YOUNG: Well have point		Page 346		Page 348
MS. THORME: Right. So the question of where it went and what kind of harm it caused, there is not evidence of harm besides that it backed up and went back down the tub. MS. MACEDO: Yes, but the people were exposed to it. MS. THORME: That is argument. MS. THORME: That is argument. MS. JAHR: I think at this point, in this at this, we're looking at the actual amount of discharge; is that correct? What we were looking at? THE WITNESS: That is correct. MS. JAHR: At this point THE WITNESS: That's what I'm talking about. MS. JAHR: you're not arguing about harm. THE WITNESS: Correct. MS. JAHR: So I don't want to MS. MACEDO: True. MS. JAHR: So I don't want to MS. MACEDO: True. MS. JAHR: get the issues mixed up. MS. JAHR: But it was not discharged if it went back into the sewer system. That is the point. So if it didn't if it went into the tub and never went of harm besides that it backed up and went of discharge in the evidence of harm besides that it backed up and went in the exact sane went out of the tub and went right back down the drain MS. THORME: so there is no one we can see it, and yes, we can look at it, but we can't ask any questions of the homeowner of what happened and didn't happen. So I mean, that is the as far as the relation to the volume issue. MR. YOUNG: Yeah MS. JAHR: Right. MR. YOUNG: True have can't ask any questions of the homeowner of what happened and didn't happen. So I mean, that is the as far as the relation to the volume issue. MR. YOUNG: The hontosurity as my questions of the homeowner of what happened and didn't happen. So I mean, that is the as far as the relation to the volume issue. MR. YOUNG: The homeowner of what happened and didn't happen. So I mean, that is the as far as the relation to the volume issue. MR. YOUNG: True have relation to the volume issue. MR. YOUNG: True have relation to the volume issue. MR. YOUNG: True have relation to the volume issue. MR. YOUNG: Well have relation to the page before. MR. YOUNG: Well have point	1	MS. JAHR: Right.	1	MS. THORME: Correct, but the objection is to
it went and what kind of harm it caused, there is not evidence of harm besides that it backed up and went back down the tub. MS. MACEDO: Yes, but the people were exposed to it. MS. THORME: That is argument. MS. JAHR: I think at this point, in this at this, we're looking at the actual amount of discharge; is that correct? What we were looking at? THE WITNESS: That is correct. MS. JAHR: At this point THE WITNESS: That's what I'm talking about. MS. JAHR: you're not arguing about harm. THE WITNESS: Correct. MS. JAHR: So I don't want to MS. JAHR: So I don't want to MS. JAHR: get the issues mixed up. MS. JAHR: But it was not discharged if it went back into the sewer system. That is the point. So if it didn't if it went into the tub and never went out of the tub and went right back down the drain MR. YOUNG: The photograph. MS. THORME: so there is no one we can see it, and yes, we can look at it, but we can't ask any questions of the homeowner of what happened and didn't happen. So I mean, that is, but erelation to the volume issue. MS. JAHR: Flat is argument. MR. YOUNG: Yeah MR. YOUNG: Well, the photo should come in with the photo submitted by the District in the exact same document on the page before. MR. YOUNG: Well, the photo should come in with the e-mail. The whole thing about the foundation and authenticity is really to make sure that you have got a reliable document in front of you, reliable evidence. I think if the District submitted the document MS. MACEDO: If the District submitted the document MR. YOUNG: in the record MR. YOUNG: in the record MR. YOUNG: The photograph was any questions of the homeowner of what happened and didn't happen. So I mean, that is the as far as the relation to the volume issue. MR. YOUNG: Yeah MR. YOUNG: Well, the photo should come in with the e-mail. The whole thing about the foundation and authenticity is really to make sure that you have got a reliable document in front of you, reliable evidence. I think if the District				
4 evidence of harm besides that it backed up and went back down the tub. 5 back down the tub. 6 MS. MACEDO: Yes, but the people were exposed to it. 8 MS. THORME: That is argument. 9 MS. JAHR: I think at this point, in this at this, we're looking at the actual amount of discharge; is that correct? What we were looking at? 12 THE WITNESS: That is correct. 13 MS. JAHR: At this point THE WITNESS: That's what I'm talking about. 14 MS. JAHR: At this point THE WITNESS: That's what I'm talking about. 15 MS. JAHR: A this point THE WITNESS: Correct. 16 MS. JAHR: So I don't want to THE WITNESS: True. 17 MS. MACEDO: True. 18 MS. JAHR: So I don't want to THE WITNESS: True. 19 MS. JAHR: So I don't want to The WITNESS: That's submitted the document in front of you, reliable evidence. 19 MS. MACEDO: True. 10 MS. JAHR: So I don't want to The WITNESS: That's submitted the document in front of you, reliable evidence. 19 MS. MACEDO: True. 20 MS. JAHR: get the issues mixed up. 21 MS. MACEDO: That's correct. 22 MS. THORME: so there is no one we can see it, and yes, we can look at it, but we can't ask any questions of the homeowner of what happened and didn't happen. So I mean, that is the as far as the relation to the volume issue. 9 MR. YOUNG: Yeah MS. JAHR: Right. 10 MS. JAHR: Right. 11 MR. YOUNG: I can't MS. MACEDO: Except to the fact that the statement contained in the e-mail seems contradicted by the photo submitted by the photo should come in with the e-mail. The whole thing about the foundation and authenticity is really to make sure that you have got a reliable document in front of you, reliable evidence. 14 MS. JAHR: get the issues mixed up. 15 MS. MACEDO: That's correct. 26 MS. JAHR: get the issues mixed up. 27 MS. MACEDO: If the District submitted the document on the page before. 28 MS. MACEDO: That's correct. 29 MS. MACEDO: That's correct. 29 MS. MACEDO: That's correct. 20 MS. M				
back down the tub. MS. MACEDO: Yes, but the people were exposed to it. MS. THORME: That is argument. MS. JAHR: I think at this point, in this at this, we're looking at the actual amount of discharge; is that correct? What we were looking at? THE WITNESS: That is correct. MS. JAHR: At this point THE WITNESS: That's what I'm talking about. MS. JAHR: you're not arguing about harm. THE WITNESS: Correct. MS. MACEDO: True. MS. JAHR: So I don't want to MS. JAHR: So I don't want to MS. JAHR: get the issues mixed up. MS. JAHR: get the issues mixed up. MS. THORME: But it was not discharged if it went to the tub and never went out of the tub and went right back down the drain So if it didn't if it went into the tub and never went out of the tub and went right back down the drain So if it and yes, we can look at it, but we can't ask any questions of the homeowner of what happened and didn't happen. So I mean, that is the as far as the relation to the volume issue. MR. YOUNG: Yeah MS. JAHR: Right. MR. YOUNG: I can't MS. MACEDO: Except to the fact that the statement contained in the e-mail seems contradicted by the photo submitted by the District in the exact same document on the page before. MR. YOUNG: Well, the photo should come in with the e-mail. The whole thing about the foundation and authenticity is really to make sure that you have got a reliable document in front of you, reliable evidence. I think if the District submitted the document MS. MACEDO: That's correct. MS. MACEDO: Tit be District submitted the document MS. MACEDO: in the record MS. MACEDO: I don't have any objection as to its authenticity. It's in, as long at least it's		•	4	
MS. MACEDO: Yes, but the people were exposed to it. MS. THORME: That is argument. MS. JAHR: I think at this point, in this at this, we're looking at the actual amount of discharge; this that correct? What we were looking at? THE WITNESS: That is correct. MS. JAHR: At this point the WITNESS: That's what I'm talking about. MS. JAHR: you're not arguing about harm. MS. JAHR: you're not arguing about harm. MS. MACEDO: True. MS. JAHR: get the issues mixed up. MS. to the foundation. I understand that hearsay
                                                                1
                                                                             Now, the volume that we think really is
2
                                                                2
                                                                     underestimated is on Monday's spill. They
     objection --
3
                                                                3
                                                                     underestimated it as 2,200 gallons, but it really also
          MR. YOUNG: Right.
4
          MS. MACEDO: -- but he submitted the document.
                                                                4
                                                                    contradicts the District's model of what happened
5
          MR. YOUNG: Right. I understand that.
                                                                5
                                                                     between Sunday and Monday. So that is the main reason
 6
          MS. MACEDO: Okay.
                                                                6
                                                                    I want to talk about Monday's spill.
7
                                                                7
          MR. YOUNG: Yeah. Okay. So I was getting back
                                                                             So this photo was submitted by the
8
                                                                8
     to where we were concerned --
                                                                     District. It is once again, GB15, and this is Exhibit
9
          MS. MACEDO: Yeah.
                                                                9
                                                                     4111. And it shows flow coming from around the
10
          MR. YOUNG: -- with the first slide.
                                                               10
                                                                     manhole. This is the annular flow. And we go back to
11
          MS. MACEDO: Yeah. So if we can return to our
                                                                    the table -- the CWE table, it is about 15 gallons
                                                               11
12
     presentation, this is the photo that was a later slide
                                                               12
13
     to which Ms. Thorme objected --
                                                               13
                                                                         THE REPORTER: I'm sorry, but could you repeat
14
          MR. YOUNG: Right.
                                                               14
                                                                    that?
15
          MS. MACEDO: -- in talking about the sewage.
                                                               15
                                                                         THE WITNESS: It is 15 gallons per minute, GPM.
16
              So do you want to go in order or out of
                                                               16
                                                                             Now, the District thought the Monday
17
                                                               17
                                                                    spills was a very small volume. And they estimate a
     order?
18
          THE WITNESS: I'm fine right here.
                                                                     discharge for 72 minutes at only four gallons per
                                                               18
19
          MS. MACEDO: Okay.
                                                               19
                                                                     minute, and they also estimate a discharge for six
20
                                                               20
          MR. YOUNG: Okay.
                                                                    other locations at very low flow, and that is why they
21
          THE WITNESS: Because it's really -- the photo
                                                               21
                                                                     come out to the 2200.
22
                                                               22
     is attached to the e-mail, and particularly the
                                                                             Well, this photo that's shown, when it
                                                               23
23
     testimony from the District, when you look at the
                                                                    was taken, looks more like 50 gallons per minute. And
24
     e-mail, is contradicted by the testimony that was given
                                                               24
                                                                     then there was also a resident in their exhibit that
25
     by the residents at the time. That's what we can see
                                                               25
                                                                     explains that there was discharge coming in at 6:30 in
                                                    Page 350
                                                                                                                    Page 352
     from the photo, and their understanding of why they
                                                                1
                                                                     the morning.
                                                                2
2
     feel that the discharge was all recovered, actually
                                                                              So this is the effluent meter for Monday,
3
     does not match how they calculated the volume
                                                                3
                                                                    and is also very telling. The next morning, you can
4
                                                                4
                                                                    see a big dip where the effluent with the -- for
     discharges.
5
                                                                5
              So basically earlier in this e-mail
                                                                    whatever reason, that went down to zero at 3:00 in the
6
     chain, the District said there was sewage coming out of
                                                                6
                                                                     morning. And then there are two other dips here where
7
                                                                7
     the toilets in this particular case, in other
                                                                    they additionally looked like they had pump problems of
8
                                                                8
     residences and was discharged. And then the floodwater
                                                                     some sort.
                                                                9
9
     came into the house. And so that sewage and
                                                                              But in the District's notes, they then
10
     floodwaters mixed, and there was discharge from the
                                                               10
                                                                    turn on the Pismo Beach pump again, and the effluent
11
     floodwaters left.
                                                                     shoots back up. Now, there was some light rain early
                                                               11
12
              So my point for these series of slides
                                                               12
                                                                     in the morning. It doesn't show it.
                                                               13
13
     was that some of the sewage mixed with the floodwaters,
                                                                              The light rain does not explain why there
14
     and was not totally recovered within the system.
                                                               14
                                                                    was discharge on Monday morning. If there was
15
              Later the District said there was
                                                               15
                                                                     discharge from the manholes, that means that they
16
     confusion among the residents, and that they felt that
                                                               16
                                                                     weren't pumping down the right form (phonetic) and
                                                                     gaining capacity. So throughout the whole period, the
                                                               17
17
     there was no discharge from the bathtubs. And
18
     therefore, they didn't report these as discharge
                                                               18
                                                                    system still has to have the -- be near capacity, if
19
     points, because the flow was fully recovered, in their
                                                               19
                                                                    not overflowing still.
                                                               20
20
     opinion.
                                                                              And so when the District -- when the
21
             Okay. Moving on. Monday's spill.
                                                               21
                                                                    system recovers and starts draining down all the water
22
                                                               22
              So the District maintains that it was
                                                                    that is within all the pipes in the sewer system,
     small. There is photos and residents that indicate the
                                                               23
                                                                     actually, we believe that is when it starts to peak up
24
     spill was much larger and longer than the District had
                                                               24
                                                                    here, about 10:00 when it's very high at 6 to 7, GPM
25
     indicated.
                                                               25
                                                                     million gallons per day. That is when the system
                                                    Page 351
                                                                                                                   Page 353
```

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

finally, we believe, drains down and then they process 1 And so for the first five hours from 11:00 to 4:00, the 2 this stored water. 2 District estimated that there was only 1.2 GPM coming 3 3 out and being discharged out of the manholes. And so I bring this point up because the 4 District had two consultants. So CH2M Hill, they 4 We don't believe that that is a credible 5 5 agreed that the District misclassified the flow out of estimate. We think that underestimated the spill. In 6 a couple of the manholes. And this is not even talking 6 fact, we still think our spill volume is relatively 7 7 about the discharge of the headworks. conservative considering the testimony that the flows 8 8 Now, CHT -- CH2M Hill claims that the at that point was closer to 10 MGD, instead of the 9 duration on flow method is more reliable. However, the 9 maximum that we assumed was about less than 9 MGD. 10 evidence that I showed you today about the discharge 10 And so this table is just a number 11 11 points, particularly at the headworks, how they between the two events. And it is basically that chart 12 underestimated the flow or the flow rate is suspect. 12 and the numbers out of that chart. 13 The manhole survey is also very suspect. We believe 13 So the pump station method that we 14 that the durational flow method, as applied by the 14 used -- the District actually used this method, too, 15 15 District, is unreliable. but they disregard it in their submittals. 16 The second main point that CH2M Hill made 16 And this is our prosecution team. So 17 in their criticism of approach was the stored volume. 17 from the two hours from 11:00 to 1:00, our spill levels 18 And so CH2M Hill thought the stored volume was were very close to that. RMC's volume drops off a 18 19 processed Sunday evening. 19 little closer in their rainfall I and I analysis, so it 20 20 However, like I said before, if that is a little bit lower. 21 stored volume was processed Sunday evening, there would 21 But if you look at the first two hours 22 be no Monday morning spills. And the peak in the 22 from the duration of the flow method used by the 23 23 effluent meter on Monday afternoon, that is when the District, it's not even a hundred thousand gallons 24 store volume was processed. So we didn't miss the 24 during this time period. We don't believe that is a 25 25 stored volume in our calculations. credible estimate, and not an estimate that you can Page 354 Page 356 1 base a finding on. Now, their other consultant, RMC, used 2 So final thoughts. I'm just basically 2 the detailed hydraulic analysis that's based on the 3 3 rainfall of I and I, and their estimate was 674,000 repeating myself here. The District's estimate of 4 4 470,000 gallons, 298 is unreliable. There is missed gallons. 5 5 Now, even though RMC does that detailed locations, underestimates of the flow, it does not 6 hydraulic analysis, we believe that it failed to include storm water. 7 7 We used data from the effluent meter to account for the flooding and storm water in the I and I 8 8 due to the flooding events. That is why you have come up with a reliant estimate, and the spill volume 9 9 of 1.1 million gallons. flooding manholes that are covered with floodwaters. 10 MS. MACEDO: He is my final witness for my 10 There is going to be more inflow and infiltration than 11 11 what happened to occur on a normal rainfall event. direct. 12 Furthermore, RMC did not analyze the rest 12 Q I want to go over the evidentiary 13 13 of the District -- the information that was provided by evidence you had. So I have taken a look -- Matt, you 14 the District. 14 can stay there. 15 15 So any mistakes that were made by the So I have taken a look at your September 16 District, aren't necessarily incorporated into RMC's 16 4th and 5th rulings on hearsay. So Dr. Buffleben, for 17 Exhibits 3 and 4, I'm going to pull up the 17 analysis and conclusions, and that applies the same to 18 prosecution's index submitted with its submission on 18 CH2M Hill's. Any errors that were made by the 19 19 District, will be incorporated into CH2M Hill's July 27th. 20 20 analysis and their conclusions also. And the calculations and spreadsheets for 21 So finally I want to show -- this was our 21 Exhibit 3 and 4, you assisted me with preparing those, 22 22 correct? confirmation slide for us. And so for this slide, we looked at the District flow rates and rainfall versus 23 23 2.4 24 In your regular course of business? our spill volume.

25

Page 355

Correct.

So this is their duration on the flow.

25

TRANSCRIPT OF HEARING

1	Q And you make you usually make those	1	MS. JAHR: I want to make sure we have final
2	types of records at or near the time you actually	2	decisions
3	made those types of records at or near the time that we	3	MS. MACEDO: Oh, I'm sorry.
4	created the exhibit, right?	4	MS. JAHR: on them.
5	A Correct.	5	MR. YOUNG: Well, you know to the extent that
6	Q All right. And 7, the violations for	6	what we're going to do is just go through the
7	late reporting for sewer backups and the District	7	documents, and if they are demonstrative, then I'm just
8	certified report. I believe that was a CIWQS?	8	going to let them in because they are just trial
9	MS. THORME: Can we respond to these as she's	9	exhibits, to demonstrate the testimony.
10	going through these?	10	So that is how I interpret 3 and 4 right
11	MR. YOUNG: Yeah, go ahead.	11	now.
12	MS. THORME: What is the underlying data	12	MS. THORME: Okay. Then can we make a request
13	that you used, that input into the spreadsheet, in	13	that their presentation today as a demonstrative also
14	evidence?	14	go into the record, because of the fact if this does
15	THE WITNESS: Yes, the spreadsheets were in	15	get appealed, that they were talking from slides that
16	evidence, and then the underlying data came from the	16	aren't in the record?
17	District, and the District submitted that as evidence,	17	MS. MACEDO: I'm happy to make a presentation
18	too.	18	of separate exhibits.
19	MS. THORME: Where is that in evidence?	19	MR. YOUNG: Okay. Let's move on.
20	THE WITNESS: In the OM omissions, and also in	20	BY MS. MACEDO:
21	the September submittal. I would have to look at the	21	Q Okay. Number 7, was it made in the
22	exhibit sheets.	22	regular course of your business?
23	MS. MACEDO: It would be NOV number 6.	23	A Yes.
24	THE WITNESS: And the supplemental information	24	MR. YOUNG: Can we take a look at that? Is
25	that was submitted by the District on Exhibit 48.	25	there a way to split the screen?
	Page 358		Page 360
			- "6"
1	MS. THORME: So apparently there is a link in	1	MS. MACEDO: You want to see number 7 as well?
2	that spreadsheet that goes back to a file that is on	2	MR. YOUNG: Yes, I'd like to.
3	Mr. Sarmiento's (phonetic) computer that is not in	3	MS. MACEDO: Oh, sure, sure, sure.
4	evidence. And so we were unable to link and get	4	MS. THORME: I'm sorry, but didn't you say that
5	answers when we were looking at those spreadsheets to	5	that was not needed any longer?
6	where all the data came from.	6	MS. MACEDO: It wasn't, but I'm giving him the
7	THE WITNESS: So that spreadsheet in particular	7	opportunity to take a look at it.
8	that we're talking about is Exhibit 3, is actually a	8	MR. YOUNG: Well, if it's not needed, can it be
9	document that was originally gotten from the District.	9	withdrawn?
10	But in any case, it doesn't matter. We didn't end up	10	MS. MACEDO: Okay.
11	using the effluent data for our estimate.	11	MR. YOUNG: Okay.
12	MR. YOUNG: So are Exhibits 3 and 4, simply	12	MS. MACEDO: Okay. Number 8 is similar to 103.
13	exhibits you have produced for the hearing itself based	13	It was
14	on other information?	14	MR. YOUNG: Let's look at 8.
15	THE WITNESS: These are exhibits we produced	15	MS. MACEDO: the first version of the
16	for the ACL	16	prosecution team's investigation of homeowner
17	MR. YOUNG: For the hearing. So these are	17	interviews.
18	demonstrative of the work you did?	18	MS. THORME: So this says that it was updated
19	THE WITNESS: Correct.	19	by Exhibit 103. So I don't know if this exhibit is
20	MS. MACEDO: Yes.	20	necessary any longer.
21	MR. YOUNG: Okay. All right.	21	MS. MACEDO: It's still relevant.
22	MS. MACEDO: Number 7, I believe it's about	22	MR. YOUNG: I want to see the exhibit.
23	their reporting, so it is not relevant.	23	MS. JAHR: Yeah.
24	MS. JAHR: Okay. Before we move on	24	MS. MACEDO: So this is Exhibit 8. So this
25	MS. MACEDO: Sure.	25	is was the first version the earlier version of,
	Page 359		Page 361

TRANSCRIPT OF HEARING

		1	
1	basically, Exhibit 103.	1	THE WITNESS: It's the
2	MR. YOUNG: We left this in.	2	MR. YOUNG: Is it the accounting office or
3	MS. JAHR: We let the updated version	3	something?
4	MS. MACEDO: Right.	4	THE WITNESS: The Department of Personnel
5	MS. JAHR: stay in.	5	Administration, I believe.
6	MR. YOUNG: Okay.	6	MR. YOUNG: Okay.
7	MS. MACEDO: Yeah.	7	THE WITNESS: Or I think they might be called
8	MR. YOUNG: So do you need this one?	8	Cal HR.
9	MS. MACEDO: If you want 103 to be replaced as	9	MS. MACEDO: Okay. And 18 was the cost-benefit
10	8, that's fine. I just wanted to show it to you since	10	analysis, and to the extent that it was ruled hearsay,
11	you asked.	11	
12	,	12	it can stay hearsay, because it would be corroborated
13	MR. YOUNG: Okay. Let's do it. Let's take 8	13	by Mr. Horner's testimony this morning.
14	out then.	14	MS. THORME: We also have an objection to the
	MS. MACEDO: That's fine.		authentication in that document.
15	MS. JAHR: Is all the information in 103 also	15	MR. YOUNG: Let's look at them.
16	contained in 8?	16	MS. MACEDO: Okay.
17	MS. MACEDO: Yes.	17	MS. JAHR: On 18?
1.8	MR. YOUNG: So 8 is withdrawn. The next one.	18	MS. THORME: I believe so, yes.
19	MS. MACEDO: Yes.	19	MS. JAHR: This morning, Dr. Horner
20	Q And 17 is the staff billing rate.	20	MS. MACEDO: Authenticated it.
21	Matt, is this something you use in your	21	MS. JAHR: authenticated it.
22	regular course of your business?	22	MS. THORME: Okay. But she didn't ask him
23	A Yes.	23	she didn't ask specifically for him to authenticate it.
24	Q Okay. Is this document something that	24	MS. MACEDO: Okay, but he used it, and he said
25	the Office of Enforcement uses to indicate how much	25	it was what he purported it to be.
	Page 362		Page 364
1	staff costs are billed at?	1	MR. JAHR: She asked him questions regarding
2	A Yes.	2	whether he prepared the document, and whether it was a
3	Q Okay. And for the ACLC's that you	3	true and accurate copy.
4	reviewed for creating the chart indicated in Exhibit	4	MS. THORME: Okay.
5	101, does this provide the basis for valuing staff	5	MR. YOUNG: I think he said enough to
6	costs at \$150?	6	authenticate it.
7	A Yes.	7	MS. MACEDO: Yeah.
8	MS. MACEDO: Okay. So this is where this	8	MS. THORME: Okay.
9	document comes from.	9	MS. JAHR: He actually authenticated 18, 109
10	MR. YOUNG: Is it part of your job to know what	10	and 113.
11	these numbers are?	11	MR. YOUNG: Okay. The next one.
12	THE WITNESS: I have a general knowledge of	12	MS. MACEDO: Okay.
13	these numbers, yes	13	MR. YOUNG: The next one.
14	MR. YOUNG: And is	14	MS. MACEDO: Okay, 19 and 20 are the exhibits
15	THE WITNESS: and how much staff costs for	15	that e-mails from Mr. Appleton, who testified. So
16	Office of Enforcement, yes.	16	to the extent they want them to remain hearsay, they
17	MR. YOUNG: And is that part of your job	17	can, because Mr. Appleton testified to them.
18	THE WITNESS: Yes.	18	MS. THORME: He didn't authenticate those
19	MR. YOUNG: is to use that information?	19	e-mails.
20	THE WITNESS: Yes.	20	MS. MACEDO: No, he did not because he
20		21	testified.
21		1. 2. 1	tesuneu.
21	MR. YOUNG: And where does the information come	l	MD VOLING, Wall thou are hearest. Hearest is
22	from?	22	MR. YOUNG: Well, they are hearsay. Hearsay is
22 23	from? THE WITNESS: The information comes from here,	22 23	admissible.
22 23 24	from? THE WITNESS: The information comes from here, and it is from	22 23 24	admissible. MS. THORME: Well, they also weren't discussed,
22 23	from? THE WITNESS: The information comes from here,	22 23	admissible.

TRANSCRIPT OF HEARING

		1	
1	foundation for them. They weren't discussed, so we	1	A Yes.
2	would ask that those be excluded.	2	Q Okay. This oh, it's not CIWQS. This
3	MS. MACEDO: He testified. I'm fine with	3	is actually a CALIMA (phonetic) report that we
4	I'm fine if they are excluded. He testified.	4	submitted as Exhibit 24, indicating a nonchlorinated
5	MR. YOUNG: Okay.	5	spill.
6	MS. MACEDO: I don't think I don't think	6	Do you recognize this?
7	I mean, this one is on District letterhead. To the	7	A Yes.
8	extent that they are regularly received by water board	8	Q Okay.
9	personnel	9	MS. THORME: We object to the spreadsheet part
10	MR. YOUNG: I will	10	of 24.
11	MS. MACEDO: someone else can authenticate	11	MR. YOUNG: You object to which part?
12	them. They are regularly received by people in region	12	MS. THORME: There are two different documents
13	three.	13	that are part of 24. One of them is the CIWQS
14	MR. YOUNG: Okay. But here's the thing,	14	document. The other document is a spreadsheet.
15	hearsay can come in.	15	MS. MACEDO: Okay. There is the spreadsheet.
16	MS. MACEDO: It can.	16	This is the spreadsheet portion of a CIWQS report.
17	MR. YOUNG: Hearsay can come in.	17	Q Dr. Buffleben, can you describe what this
18	MS. MACEDO: This is an administrative	18	is?
19	proceeding.	19	A It is a report about the spills, I
20	MR. YOUNG: The only thing we're quibbling	20	believe, in a CIWQS, and the violation
21	about is to what extent it can be used.	21	MS. JAHR: If I can make a clarification. I
22	MS. MACEDO: Right.	22	don't believe you objected to 24 previously.
23	MR. YOUNG: So that really is the issue, so	23	MS. WRIGHT: Number 24 was listed on the
24	MS. MACEDO: Yes. So moving on to 24.	24	evidentiary ruling of the document that needed to be
25	MR. YOUNG: So let's deal with that.	25	that needed foundation laid to be authenticated in
	Page 366		Page 368
1	Have you withdrawn	1	order to be admitted.
2	MS. MACEDO: I'm sorry	2	MS. MACEDO: And the rulings clarified that
3	MR. YOUNG: his e-mail?	3	Exhibit A, my responses to the evidentiary
4	MS. MACEDO: I would prefer that 19 and 20 come	4	objections
5	in as hearsay, and they be corroborated	5	MS. JAHR: Okay.
6	MR. YOUNG: Okay.	6	MS. MACEDO: allowed all three of my
7	MS. MACEDO: by Mr. Appleton's direct	7	engineers to authenticate the documents.
8	testimony.	8	MS. JAHR: Okay. I see it now. Sorry.
9	MR. YOUNG: Okay. They can't come in because	9	So the question is to what extent is this
	he did not authenticate them, and you had him as a		spreadsheet who made this and
11	witness.	11	MS. MACEDO: Sure.
12	MS. MACEDO: Okay. That's fine.	12	MS. JAHR: how is it created?
13	MR. YOUNG: Had you done that, they would come	13	THE WITNESS: It was made in our regular
14	in.	14	business
15	MS. MACEDO: That's fine.	15	MS. MACEDO: It was a CIWQS report that was
16	MR. YOUNG: So they have got to be they're	16	one
17	out.	17	MR. YOUNG: Let him testify as to
18	MS. MACEDO: That's totally fine.	18	MS. MACEDO: Okay.
19	So 24, is a CIWQS report.	19	THE WITNESS: It was a CIWQS report done by Jim
20	Q Dr. Buffleben, is a CIWQS report	20	Fischer looking at the District's sewer system and the
21	something you conduct or run in the regular course of	21	treatment plant and violation
22	your business?	22	MR. YOUNG: This
23	A Yes.	23	THE REPORTER: Excuse me, you faded off at the
24	Q And is this a report that you prepared in	24	end of your answer.
25	making Exhibit 24?	25	THE WITNESS: Oh, I'm sorry.
	Page 367		Page 369

TRANSCRIPT OF HEARING

			•
1	It's a violation report for the	1	MS. MACEDO: It's 101.
2	collection system and wastewater treatment plant from	2	MS. JAHR: It's 101.
3	CIWQS, which is the State database for reporting	3	MR. YOUNG: All right.
4	violations.	4	MS. MACEDO: Okay, 103 we have already
5	MR. YOUNG: So this is a is this a report	5	MR. YOUNG: Hold on. We're not off this one
6	that you took from CIWQS data, and you generated this	6	_
7		7	yet. MS. JAHR: That's fine. That's fine.
8	report? Is this what this is?	8	
9	THE WITNESS: Yes.	9	MS. MACEDO: Okay.
10	MR. YOUNG: Okay.	10	MS. JAHR: You can go ahead.
11	MS. THORME: And we objected to this document,	11	MR. YOUNG: Okay.
12	that it was inaccurate. And then this included things	12	MS. MACEDO: So 103 is already taken care of,
13	in there about the other Districts, besides this	13	and 105 is
14	District.	14	Q Dr. Buffleben, you prepared Exhibit 105,
	MR. YOUNG: And I think the way to deal with		correct?
15	that would be for Melissa to have a witness and ask him	15 16	A Correct.
16	a question on cross or have a witness deal with that		Q In your regular course of business?
17	Or	17	A Correct.
18	MS. THORME: Okay.	18	Q Can you describe what it is?
19	MR. YOUNG: point that out to us in	19	A It is testimony about the District's
20	closing	20	spill and analysis.
21	MS. THORME: Okay.		MS. MACEDO: Okay. To the extent it
	MR. YOUNG: if it's not accurate.	22	corroborates his testimony, it is just a summary of
23	MS. THORME: Okay.	23	what he testified to. As far as I'm concerned, it's
24	MR. YOUNG: Next one.	24	argument. So it does not need to be evidence.
25	MS. MACEDO: Okay. Almost done.	25	MR. YOUNG: Is this your document? You
	Page 370		Page 372
1	O Okay 101 is the ACLC comparison short	1	neduced this?
2	Q Okay, 101 is the ACLC comparison chart. Did you prepare this?	1 2	produced this?
3		3	THE WITNESS: Yes. It's a prosecution team,
4	•	4	but I was the primary author on this document.
5	Q And in your regular course of business? A Yes.	5	MS. THORME: We would accept it as argument
6	MS. MACEDO: Okay. Do you have any questions	6	just like a brief
7	about this, either Ms. Thorme or the Board?	7	MR. YOUNG: Okay.
8	•		MS. THORME: if that is what they're willing
9	MR. YOUNG: Where did you get this information from?	8	to put it up as.
10	THE WITNESS: This is from the websites and	9	MR. YOUNG: Okay.
11			MS. MACEDO: Okay, 107 is simply a full copy of
12	CIWQS reports, our original water board and our State	11 12	a Wallace document. And this is something that I
13	Board Department of Enforcement actions. And so I	1	agreed to, without incident, for Exhibits 6 and 20.
14	downloaded the documents ACLC's or ACLO's to look at	13	There were just pieces missing, and I supplied a full
15	the penalties and the volumes and the factors	1	copy as Exhibit 107, and the District objected. That's
16	regarding under the enforcement policy as	15	all it is.
17	comparisons to the ACLC here today.	16	MR. YOUNG: Well, what is the objection based
18	MR. YOUNG: Did you make similar reports or exhibits like this before in your other cases?	17	on?
19	•		MS. THORME: It was lack of authentication and
20	THE WITNESS: This is my first case for this,	19	foundation, I think.
	but we have used this for other cases, yes. Actually	20	MR. YOUNG: And did the District produce this
21	this particular spreadsheet, particularly in North	21	to the original board?
2.2	Tahaa		
22	Tahoe.	22	MS. THORME: I
23	MR. YOUNG: Is this an exhibit which one is	23	MS. MACEDO: It was
23 24	MR. YOUNG: Is this an exhibit which one is it?	23 24	MS. MACEDO: It was MS. THORME: It may have been part of the
23	MR. YOUNG: Is this an exhibit which one is	23	MS. MACEDO: It was

TRANSCRIPT OF HEARING

1	THE WITNESS: No, actually it was part of the	1	objection.
2	NOV response.	2	MS. JAHR: Is the screen shot substantially
3	MS. THORME: Okay. I don't know where it came	3	different than that screen shot?
4	from.	4	THE WITNESS: I can't they are very similar.
5	THE WITNESS: It's	5	They could be within a couple of grams of each other.
6	MS. MACEDO: It was produced in Exhibit 6,	6	MS. MACEDO: I'm sorry, what is the argument?
7	incomplete.	7	So there are no objections to 99, and
8	MS. THORME: So it will be a hearsay document	8	she's okay with the video and her screen shot of 106,
9	because he's not here to testify about the document,	9	but not our screen shot of 106? Is that what you
10	the author. And I don't believe they cited to it in	10	are
11	their case.	11	MS. THORME: No, I'm okay with the video. And
12	MR. YOUNG: Well, if it came in with the NOV	12	I said you didn't use the video. And then
13	response, then it can come in as a business record or	13	Mr. Buffleben said you did in a screen shot, which I
14	a	14	had assumed was the same screen shot that we had put
15	MS. JAHR: Admission.	15	in. But now you're saying that it is not.
16	MR. YOUNG: I mean, Mr. Wallace is the chief	16	So we still have the same objection. You
17	engineer.	17	can use our screen shot that is in evidence, but this
18	MS. THORME: Right. But the point is they	18	has not been authenticated, the video.
19	never cited to this for any purpose so	19	BY MS. MACEDO:
20	MR. YOUNG: Okay.	20	Q Well, in terms of the screen shot from
21	THE WITNESS: Yes, we did.	21	the video, Dr. Buffleben, the screen shot you used in
22	MS. THORME: You did?	22	your testimony, is that something that you acquired in
23	MS. MACEDO: We were trying to provide a	23	the regular course of business?
24	complete copy. I mean, to the extent that you did it	24	A Yes.
25	several times, I'm shocked that you're	25	Q And you put it in the presentation today
	Page 374		Page 376
1	MS. THORME: Okay.	1	in the regular course of your business?
2	MS. THORME: Okay. MS. MACEDO: continuing to object to it,	2	in the regular course of your business? A Yes.
	•		A Yes. Q And is it an accurate representation of
2 3 4	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our	2 3 4	A Yes.
2 3 4 5	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document.	2	A Yes. Q And is it an accurate representation of
2 3 4	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109	2 3 4	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video
2 3 4 5	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben	2 3 4 5 6 7	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over
2 3 4 5 6 7 8	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered	2 3 4 5 6	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil
2 3 4 5 6 7 8	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered testimony today, so that is it.	2 3 4 5 6 7 8	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil thing that was happening. So that is the problem is we
2 3 4 5 6 7 8 9	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered testimony today, so that is it. MR. YOUNG: So this exhibit explains and	2 3 4 5 6 7 8 9	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil thing that was happening. So that is the problem is we can't ask what was happening over there.
2 3 4 5 6 7 8 9 10	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered testimony today, so that is it. MR. YOUNG: So this exhibit explains and supplements his testimony?	2 3 4 5 6 7 8 9 10	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil thing that was happening. So that is the problem is we can't ask what was happening over there. MR. YOUNG: Yeah, I think with that exhibit,
2 3 4 5 6 7 8 9 10 11	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered testimony today, so that is it. MR. YOUNG: So this exhibit explains and supplements his testimony? MS. MACEDO: That's right.	2 3 4 5 6 7 8 9 10 11	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil thing that was happening. So that is the problem is we can't ask what was happening over there. MR. YOUNG: Yeah, I think with that exhibit, you just need to point that out to us because the photo
2 3 4 5 6 7 8 9 10 11 12 13	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered testimony today, so that is it. MR. YOUNG: So this exhibit explains and supplements his testimony? MS. MACEDO: That's right. MS. THORME: So there are two other documents	2 3 4 5 6 7 8 9 10 11 12 13	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil thing that was happening. So that is the problem is we can't ask what was happening over there. MR. YOUNG: Yeah, I think with that exhibit, you just need to point that out to us because the photo shows what it shows. And that is their interpretation
2 3 4 5 6 7 8 9 10 11 12 13 14	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered testimony today, so that is it. MR. YOUNG: So this exhibit explains and supplements his testimony? MS. MACEDO: That's right. MS. THORME: So there are two other documents that were hearsay documents. One is 99, and we used it	2 3 4 5 6 7 8 9 10 11 12 13	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil thing that was happening. So that is the problem is we can't ask what was happening over there. MR. YOUNG: Yeah, I think with that exhibit, you just need to point that out to us because the photo shows what it shows. And that is their interpretation of what is going on with it.
2 3 4 5 6 7 8 9 10 11 12 13 14 15	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered testimony today, so that is it. MR. YOUNG: So this exhibit explains and supplements his testimony? MS. MACEDO: That's right. MS. THORME: So there are two other documents that were hearsay documents. One is 99, and we used it so we will withdraw the objection to Number 99.	2 3 4 5 6 7 8 9 10 11 12 13 14	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil thing that was happening. So that is the problem is we can't ask what was happening over there. MR. YOUNG: Yeah, I think with that exhibit, you just need to point that out to us because the photo shows what it shows. And that is their interpretation of what is going on with it. MS. THORME: Okay. But they only used the
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered testimony today, so that is it. MR. YOUNG: So this exhibit explains and supplements his testimony? MS. MACEDO: That's right. MS. THORME: So there are two other documents that were hearsay documents. One is 99, and we used it so we will withdraw the objection to Number 99. And the other one was the video that was	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil thing that was happening. So that is the problem is we can't ask what was happening over there. MR. YOUNG: Yeah, I think with that exhibit, you just need to point that out to us because the photo shows what it shows. And that is their interpretation of what is going on with it. MS. THORME: Okay. But they only used the screen shot. So I would say that is coming through
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered testimony today, so that is it. MR. YOUNG: So this exhibit explains and supplements his testimony? MS. MACEDO: That's right. MS. THORME: So there are two other documents that were hearsay documents. One is 99, and we used it so we will withdraw the objection to Number 99. And the other one was the video that was 106, and that has not been authenticated, and they have	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil thing that was happening. So that is the problem is we can't ask what was happening over there. MR. YOUNG: Yeah, I think with that exhibit, you just need to point that out to us because the photo shows what it shows. And that is their interpretation of what is going on with it. MS. THORME: Okay. But they only used the screen shot. So I would say that is coming through their demonstrative
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered testimony today, so that is it. MR. YOUNG: So this exhibit explains and supplements his testimony? MS. MACEDO: That's right. MS. THORME: So there are two other documents that were hearsay documents. One is 99, and we used it so we will withdraw the objection to Number 99. And the other one was the video that was 106, and that has not been authenticated, and they have not used it.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil thing that was happening. So that is the problem is we can't ask what was happening over there. MR. YOUNG: Yeah, I think with that exhibit, you just need to point that out to us because the photo shows what it shows. And that is their interpretation of what is going on with it. MS. THORME: Okay. But they only used the screen shot. So I would say that is coming through their demonstrative MR. YOUNG: Okay.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered testimony today, so that is it. MR. YOUNG: So this exhibit explains and supplements his testimony? MS. MACEDO: That's right. MS. THORME: So there are two other documents that were hearsay documents. One is 99, and we used it so we will withdraw the objection to Number 99. And the other one was the video that was 106, and that has not been authenticated, and they have not used it. THE WITNESS: No, we have used it.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil thing that was happening. So that is the problem is we can't ask what was happening over there. MR. YOUNG: Yeah, I think with that exhibit, you just need to point that out to us because the photo shows what it shows. And that is their interpretation of what is going on with it. MS. THORME: Okay. But they only used the screen shot. So I would say that is coming through their demonstrative MR. YOUNG: Okay. MS. THORME: presentation. They did not run
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered testimony today, so that is it. MR. YOUNG: So this exhibit explains and supplements his testimony? MS. MACEDO: That's right. MS. THORME: So there are two other documents that were hearsay documents. One is 99, and we used it so we will withdraw the objection to Number 99. And the other one was the video that was 106, and that has not been authenticated, and they have not used it. THE WITNESS: No, we have used it. MS. MACEDO: We did.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil thing that was happening. So that is the problem is we can't ask what was happening over there. MR. YOUNG: Yeah, I think with that exhibit, you just need to point that out to us because the photo shows what it shows. And that is their interpretation of what is going on with it. MS. THORME: Okay. But they only used the screen shot. So I would say that is coming through their demonstrative MR. YOUNG: Okay. MS. THORME: presentation. They did not run the video that was provided as an exhibit. So I would
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered testimony today, so that is it. MR. YOUNG: So this exhibit explains and supplements his testimony? MS. MACEDO: That's right. MS. THORME: So there are two other documents that were hearsay documents. One is 99, and we used it so we will withdraw the objection to Number 99. And the other one was the video that was 106, and that has not been authenticated, and they have not used it. THE WITNESS: No, we have used it. MS. MACEDO: We did. MS. JAHR: They used a screen shot of it.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil thing that was happening. So that is the problem is we can't ask what was happening over there. MR. YOUNG: Yeah, I think with that exhibit, you just need to point that out to us because the photo shows what it shows. And that is their interpretation of what is going on with it. MS. THORME: Okay. But they only used the screen shot. So I would say that is coming through their demonstrative MR. YOUNG: Okay. MS. THORME: presentation. They did not run the video that was provided as an exhibit. So I would ask that the video itself be excluded, and they can
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered testimony today, so that is it. MR. YOUNG: So this exhibit explains and supplements his testimony? MS. MACEDO: That's right. MS. THORME: So there are two other documents that were hearsay documents. One is 99, and we used it so we will withdraw the objection to Number 99. And the other one was the video that was 106, and that has not been authenticated, and they have not used it. THE WITNESS: No, we have used it. MS. MACEDO: We did. MS. JAHR: They used a screen shot of it. MS. THORME: Which was in evidence separately.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil thing that was happening. So that is the problem is we can't ask what was happening over there. MR. YOUNG: Yeah, I think with that exhibit, you just need to point that out to us because the photo shows what it shows. And that is their interpretation of what is going on with it. MS. THORME: Okay. But they only used the screen shot. So I would say that is coming through their demonstrative MR. YOUNG: Okay. MS. THORME: presentation. They did not run the video that was provided as an exhibit. So I would ask that the video itself be excluded, and they can have that screen shot in their presentation.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered testimony today, so that is it. MR. YOUNG: So this exhibit explains and supplements his testimony? MS. MACEDO: That's right. MS. THORME: So there are two other documents that were hearsay documents. One is 99, and we used it so we will withdraw the objection to Number 99. And the other one was the video that was 106, and that has not been authenticated, and they have not used it. THE WITNESS: No, we have used it. MS. MACEDO: We did. MS. JAHR: They used a screen shot of it. MS. THORME: Which was in evidence separately. The District had turned that screen shot in.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil thing that was happening. So that is the problem is we can't ask what was happening over there. MR. YOUNG: Yeah, I think with that exhibit, you just need to point that out to us because the photo shows what it shows. And that is their interpretation of what is going on with it. MS. THORME: Okay. But they only used the screen shot. So I would say that is coming through their demonstrative MR. YOUNG: Okay. MS. THORME: presentation. They did not run the video that was provided as an exhibit. So I would ask that the video itself be excluded, and they can have that screen shot in their presentation. MR. YOUNG: That's fine.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered testimony today, so that is it. MR. YOUNG: So this exhibit explains and supplements his testimony? MS. MACEDO: That's right. MS. THORME: So there are two other documents that were hearsay documents. One is 99, and we used it so we will withdraw the objection to Number 99. And the other one was the video that was 106, and that has not been authenticated, and they have not used it. THE WITNESS: No, we have used it. MS. MACEDO: We did. MS. JAHR: They used a screen shot of it. MS. THORME: Which was in evidence separately. The District had turned that screen shot in. THE WITNESS: We used same screen shot.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil thing that was happening. So that is the problem is we can't ask what was happening over there. MR. YOUNG: Yeah, I think with that exhibit, you just need to point that out to us because the photo shows what it shows. And that is their interpretation of what is going on with it. MS. THORME: Okay. But they only used the screen shot. So I would say that is coming through their demonstrative MR. YOUNG: Okay. MS. THORME: presentation. They did not run the video that was provided as an exhibit. So I would ask that the video itself be excluded, and they can have that screen shot in their presentation. MR. YOUNG: That's fine. MS. MACEDO: We're fine with that.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	MS. MACEDO: continuing to object to it, but MS. THORME: Okay. We will withdraw our objection to this document. MS. MACEDO: All right. The last one. The 109 by Horner was his resume and comments on the Ben (phonetic) model, and he authenticated and offered testimony today, so that is it. MR. YOUNG: So this exhibit explains and supplements his testimony? MS. MACEDO: That's right. MS. THORME: So there are two other documents that were hearsay documents. One is 99, and we used it so we will withdraw the objection to Number 99. And the other one was the video that was 106, and that has not been authenticated, and they have not used it. THE WITNESS: No, we have used it. MS. MACEDO: We did. MS. JAHR: They used a screen shot of it. MS. THORME: Which was in evidence separately. The District had turned that screen shot in.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	A Yes. Q And is it an accurate representation of what you received from KSBY pursuant to subpoena? A Yes. MS. THORME: But the person who took the video is not here. We can't ask them what was happening over in that corner. What they're pointing to is some evil thing that was happening. So that is the problem is we can't ask what was happening over there. MR. But they only used the screen shot. So I would say that is coming through their demonstrative MR. YOUNG: Okay. MS. THORME: presentation. They did not run the video that was provided as an exhibit. So I would ask that the video itself be excluded, and they can have that screen shot in their presentation. MR. YOUNG: That's fine.

TRANSCRIPT OF HEARING

1	MR. YOUNG: Okay.	1	adjustments, which I'm going to detail. They started a
2	MS. THORME: Mr. Chair?	2	little later and so forth.
3	MR. YOUNG: Yes.	3	Okay. So what we did was to see if this
4	MS. THORME: I understand this is going to be	4	is a correct assumption. If that line is the best that
5	complicated, but I have a person who has to leave to	5	can be done to estimate what would have happened.
6	catch a flight. So I would ask if we can do him out of	6	So we did this by modeling the system.
7	order and let me cross Mr. Buffleben or	7	We looked at 14 different rainfall events. We
8	Dr. Buffleben after.	8	calibrated a hydrologic model. All of that information
9	MR. YOUNG: That's fine.	9	is in my report, but the bottom line has been shown
10	MS. THORME: Okay. Thank you very much.	10	here.
11	MR. YOUNG: That's fine.	11	This red line represents what we modeled
12	MS. THORME: So I know this is a little	12	would have occurred. It starts with the 18th through
13	complicated because they have not closed their case	13	the 19th and 20th. This part up through the peak here
14	yet, but if we can bring on Paul Sanghera (phonetic)	14	was actually recorded. And at the effluent meter and
15	from RMC.	15	our data matches very closely. Our model matches very
16	MS. MACEDO: You're two or three	16	closely what actually happened on the 18th.
17	TIO. TINGEBOT TOUTE ENOUGH CHICC	17	This is the rainfall that occurred
18	DIRECT EXAMINATION	18	represented down here. So you can see the bulk of
19	THE WITNESS: My name is Paul Sanghera. I'm a	19	rainfall occurred on the 18th through about this point
20	principal with RMC Water and Environment. I am an	20	on the 19th, which is about when the spill started.
21	expert in flow modeling sewer systems, in particular	21	What this shows also is in this blue line
22	modeling of hydrology and hydraulics and filtration	22	is the assumption that I showed on the previous slide,
23	inflow. I have been doing this for 36 years.	23	that the Office of Enforcement made. It is basically
24	And I was brought in to prepare this	24	the dry-weather flow elevated by 4 MGD.
25	report, which is focused on reviewing of the Office of	25	So you can see that there is our analysis
20	-	2 3	
	Page 378		Page 380
1	Enforcementals of an enland number station mother dolors, of	1	hand on the modeling of the uninfall and the reconnec
1	Enforcement's of so-called pump station methodology of	1 2	based on the modeling of the rainfall, and the response
2	estimating the spill volumes. And I have presented this report, which I believe is Exhibit 32.	3	to the system to it. It showed that the peak flow
4	·	4	actually occurred very near when the pumps failed, and that it went down rather rapidly after that and picks
5	Okay. I'm from San Diego. I guess I	5	
6	needed to say that, and I was sworn in earlier much	6	up in here, is where we start to have effluent data
7	earlier today.	7	again.
8	Okay. So what I did was to review the	8	What I'm showing in these dotted lines is
9	method that the Office of Enforcement has just	9	simply the same information that the dry-weather flow subtracted. So we're just looking at the flow that has
10	presented, the pump station method, for calculating the	10	
11	spill volume, which led to their estimate of 1.1 or so	11	been assumed to be I and I, that came down from the
12	million gallons.	12	watershed to reach the plant.
	This graphic is from their		Again, this is the rainfall. Our
13	presentation and let me see if this works. Here we	13	analysis is shown here in the dotted line. And again,
14	go.	14	the peak was reached around the time the failure
15	Okay. As you recall, this is effluent as	15	occurred and went down pretty precipitously, because as
16	measured at the plant. And this line represents the	16	you can see, it was very little rainfall after the
17	flow that the Office of Enforcement estimated would	17	spill started and it had only peaked a little bit the
18	have reached the plant if it had been able to be	18	following day.
19	metered. Of course, we don't know that.	19	The blue dash line is what the Office of
20	So they went through how they developed	20	Enforcement's assumption was for what the I and I was.
21	that. They basically took the normal dry-weather	21	And as I mentioned, it was basically a flat line at 4
22	pattern and elevated it by about 4 MGD, and they said	22	MGD. So they're assuming that the infiltration inflow
23	that consequents the floor than 1999 1999 1999		was well above the normal dry-weather flow that
0.4	that represents the flow they would he have gotten	23	was well above the normal dry-weather flow that
24	there. And therefore the difference between these two	24	occurred at a rate of 4 MGD throughout the whole spill
24 25	•	1	•

1	obviously considerably lower.	1	MS. MACEDO: Oh, sorry.
2	The difference between their dotted line	2	Q Does your model explain the peaks in the
3	and our dotted line is the major difference in the	3	hydrograph on Monday after 10:00 a.m.?
4	spill estimate that we made. So our spill estimate was	4	A Yes. Could you show us figure 6, please?
5	about 400,000 gallons less than the Office of	5	This is a graphic that shows the observed
6	Enforcement's estimate.	6	effluent in blue, and our model flows in red. As I
7	Now, if you recall the previous	7	mentioned and that's the rainfall here.
8	testimony, the justification for using the constant I	8	So this is obviously the spill period in
9	and I, was related to the flooding. Our hydrograph	9	here. On the following day, your question is, does it
10	represents the flow that would have reached the plant	10	explain this spike or
11	in the absence of the flooding, because it is based on	11	Q No, I guess let me try it again.
12	nonflooding events. We looked at 14 events. This was	12	Does your model explain the peaks on this
13	the only one event where there was actually flooding	13	slide? Do
14	that occurred. So that is correct.	14	A Which peak?
15	However, the reason that we believe this	15	Q The I guess I should say
16	is still the correct curve is because the floodwaters	16	A This is due to the operational issues
17	that occurred during this event, were in the vicinity	17	with the pumps.
18	of the plant only.	18	Q After 10:00 on Monday?
19	They were in a downstream area. They	19	A After 10:00.
20	were you know, we talked about 20 or so manholes	20	Okay. Yeah, so what happened there was
21	that were inundated. What is pretty basic is that	21	that you can see there were issues about pumps. I
22	during the spill, those 20 manholes were spilling.	22	don't know the details, obviously. But at this point,
23	Flow was coming out of those manholes during that	23	the pumps come on and off. And then at this point,
24	period. So it didn't matter if they were inundated	24	some extra pumping was brought on-line to draw the
25	with floodwater. The pressure driving the flow out of	25	system down.
	Page 382		Page 384
	1 450 3 02		1 450 301
1	the system at that time.	1	I think my previous graph showed that the
2	So in other words, the hydraulic grade	2	model predicted during this period it will be
3	line would back up from the plant, was causing those	3	helpful to go back.
4	manholes to spill, and so those floodwaters could get	4	What you can see is my model line is the
5	in.	5	red. So during this period in here, the flow is
6	We looked very carefully at the	6	exceeding the predicted flow is exceeding what was
7	observations over the whole time line of what the	7	being pumped, and I assume that was due to some issues
8	elevations of the backup of the plant were versus the	8	getting the pump back on. You can see, it is
9	elevation of the floodwater. And at no time was there	9	dramatically came up here, and they pumped down the
10	floodwater over the rim of the manhole when those	10	system at that point.
11	manholes weren't spilling.	11	So most likely what was happening there
12	BY MS. THORME:	12	is that there was backup in the system during this
13	Q Okay. So Mr. Sanghera, is it your	13	period of time. And then it was drained back during
14	conclusion that the Office of Enforcement overestimated	14	this period of time.
15	the spill volume?	15	And I know there is some evidence of some
16	A Yes, by 400,000, as I mentioned.	16	overflows which were estimated by the District during
17	MS. THORME: Okay. That is the end of our	17	this period, in which so the model actually does
18	direct testimony. I ran out of time.	18	show very clearly that there was more flow coming in
19	MR. YOUNG: Okay. Cross?	19	the system than was being pumped for a few years there.
20	MS. MACEDO: Yes.	20	Q Okay. Do you know if there was flooding
21	5	21	at GB13 or excuse me at GB15 on North Swing
22	CROSS-EXAMINATION	22	Avenue at 9:30 p.m. on December 19th?
23	BY MS. MACEDO:	23	A I believe that is one of the lowest line
24	Q Does your model explain the	24	manholes, and the flooding overflows occurred until
25	MR. YOUNG: Microphone.	25	about 10:00 p.m. So I would say that was toward the
	Page 383		Dage 285

1	very end of it, but yes.	1	nearby streams and, you know, there is a similarity in
2	MS. MACEDO: Okay. I have nothing further.	2	hydrology, and are you comparing the contrasting of
3	MR. YOUNG: Any redirect?	3	those, and if so, do you have that information
4	MS. THORME: No.	4	available?
5	MR. YOUNG: Okay. Mr. Jeffries?	5	THE WITNESS: Well, you're correct that the
6	MR. JEFFRIES: Nothing.	6	hydrology of modeling infiltration inflow and sewer
7	MR. YOUNG: Mr. Harris?	7	systems, is very analogous to the hydrology of runoff
8	MR. HARRIS: I wanted to go back to it's not	8	in creeks and from watersheds.
9	this slide, but it was another one that the gentleman	9	Actually, you know, my background was
10	was using.	10	originally in drainage and I adapted those technologies
11	THE WITNESS: The bottom one there?	11	into I and I modeling and I was the first one to do
12	MR. HARRIS: Yeah, I'm just kind of curious,	12	that. And the techniques I have developed has been
13	because it's more quality of a question.	13	ingrained in all of the major modeling software now
14	So the sewer plant is right next to the	14	that is being used.
15	ocean, so it is essentially the bottom of the	15	So yes, what we did in this case was to
16	watershed. And typically after heavy rains and the	16	calibrate the model based on specific response in the
17	flooding event, it tends to take a while for a	17	sewer systems. It is probably comparable to the
18	watershed to drain. So you're still going to have a	18	response in some streams, but obviously each system has
19	considerable amount of flooding?	19	to be looked at and calibrated independently. We
20	THE WITNESS: Well	20	didn't we had no reason, obviously, to look at the
21	MR. HARRIS: And it seems like your prediction	21	stream flow.
22	or your model is reacting very quickly. It's like it	22	DR. WOLF: One more question.
23	is almost mimicking, you turn the rain off and all of a	23	As part of your study that you were
24	sudden the flow is decreasing.	24	requested to perform, if you looked at gallon output on
25	THE WITNESS: It is a little hard to tell on	25	some of the data that was presented earlier I will
23			·
	Page 386		Page 388
1	this time scale. I imagine there is probably a lag of	1	refer to the KSBY frame of the video which has a
2	two hours or so. I'm not sure. I have not studied	2	four-inch-diameter pipe that was showing outflow from
3	that.	3	that
4	What we did do is, like I said, we looked	4	THE WITNESS: Right.
5	at 14 different events of varying sizes and on varying	5	DR. WOLF: have you
6	soil conditions, and the model reflects the rate of the	6	THE WITNESS: No, I did not review any of that.
7	increase of the flow and the rate of the recession of	7	I was I presented what I was asked to do.
8	flow very accurately. And all of the calibrations	8	DR. WOLF: Okay. So likewise with the pump
9	information is presented in our report.	9	station opening where water was exiting that facility,
10	MR. HARRIS: Okay. Thank you.	10	that was not part of your scope of study?
11	MR. YOUNG: Dr. Wolf?	11	THE WITNESS: It would be included in the
12	DR. WOLF: On a similar vein, you mentioned	12	analysis because if the flow didn't get pumped out of
13	that you looked at 14 other	13	the system, it was assumed that it overflowed or was
14	THE WITNESS: Yes.	14	stored.
15			
	DR. WOLF: examples.	15	So again, there's one of the things
16	DR. WOLF: examples. Now, if you looked at data, on what I	15 16	So again, there's one of the things that well, maybe I shouldn't be saying this. But my
	Now, if you looked at data, on what I		that well, maybe I shouldn't be saying this. But my
16	Now, if you looked at data, on what I will call drain ditches and streams, blue line streams	16	
16 17	Now, if you looked at data, on what I will call drain ditches and streams, blue line streams nearby, and look at the effect of the watershed effect	16 17	that well, maybe I shouldn't be saying this. But my estimate was that, you know, that is the total volume
16 17 18	Now, if you looked at data, on what I will call drain ditches and streams, blue line streams nearby, and look at the effect of the watershed effect of drainage and the reduction of rainfall.	16 17 18	that well, maybe I shouldn't be saying this. But my estimate was that, you know, that is the total volume under the hydrograph between those two hydrographs. There was an adjustment made for that for storage. We
16 17 18 19	Now, if you looked at data, on what I will call drain ditches and streams, blue line streams nearby, and look at the effect of the watershed effect of drainage and the reduction of rainfall. To put it in different terms, similarly,	16 17 18 19	that well, maybe I shouldn't be saying this. But my estimate was that, you know, that is the total volume under the hydrograph between those two hydrographs. There was an adjustment made for that for storage. We know the flow was pumped into slush lagoons.
16 17 18 19 20	Now, if you looked at data, on what I will call drain ditches and streams, blue line streams nearby, and look at the effect of the watershed effect of drainage and the reduction of rainfall. To put it in different terms, similarly, I look at your graph, and there is a what I would	16 17 18 19 20	that well, maybe I shouldn't be saying this. But my estimate was that, you know, that is the total volume under the hydrograph between those two hydrographs. There was an adjustment made for that for storage. We know the flow was pumped into slush lagoons. We know that it backs up into the
16 17 18 19 20 21	Now, if you looked at data, on what I will call drain ditches and streams, blue line streams nearby, and look at the effect of the watershed effect of drainage and the reduction of rainfall. To put it in different terms, similarly, I look at your graph, and there is a what I would characterize as a direct correlation between the stop	16 17 18 19 20 21	that well, maybe I shouldn't be saying this. But my estimate was that, you know, that is the total volume under the hydrograph between those two hydrographs. There was an adjustment made for that for storage. We know the flow was pumped into slush lagoons. We know that it backs up into the collection system and gets stored. The District did
16 17 18 19 20 21 22	Now, if you looked at data, on what I will call drain ditches and streams, blue line streams nearby, and look at the effect of the watershed effect of drainage and the reduction of rainfall. To put it in different terms, similarly, I look at your graph, and there is a what I would	16 17 18 19 20 21 22	that well, maybe I shouldn't be saying this. But my estimate was that, you know, that is the total volume under the hydrograph between those two hydrographs. There was an adjustment made for that for storage. We know the flow was pumped into slush lagoons. We know that it backs up into the
16 17 18 19 20 21 22 23	Now, if you looked at data, on what I will call drain ditches and streams, blue line streams nearby, and look at the effect of the watershed effect of drainage and the reduction of rainfall. To put it in different terms, similarly, I look at your graph, and there is a what I would characterize as a direct correlation between the stop of rain and a very rapid response in drop also of the sewer.	16 17 18 19 20 21 22 23	that well, maybe I shouldn't be saying this. But my estimate was that, you know, that is the total volume under the hydrograph between those two hydrographs. There was an adjustment made for that for storage. We know the flow was pumped into slush lagoons. We know that it backs up into the collection system and gets stored. The District did some calculation on that regard. They took my numbers
16 17 18 19 20 21 22 23 24	Now, if you looked at data, on what I will call drain ditches and streams, blue line streams nearby, and look at the effect of the watershed effect of drainage and the reduction of rainfall. To put it in different terms, similarly, I look at your graph, and there is a what I would characterize as a direct correlation between the stop of rain and a very rapid response in drop also of the	16 17 18 19 20 21 22 23 24	that well, maybe I shouldn't be saying this. But my estimate was that, you know, that is the total volume under the hydrograph between those two hydrographs. There was an adjustment made for that for storage. We know the flow was pumped into slush lagoons. We know that it backs up into the collection system and gets stored. The District did some calculation on that regard. They took my numbers and then subtracted those storage volumes to come up

TRANSCRIPT OF HEARING

		1	
1	DR. WOLF: So did you have a chance to review	1	into it
2	the calculations that the District had done?	2	THE WITNESS: Right.
3	THE WITNESS: No, I did not independently	3	MR. JOHNSTON: and what are those
4	review those calculations. I was aware that you	4	projections.
5	know, how they did it. They used a model to calculate	5	And it strikes me that the floodwaters
6	the volume system. It was all reasonable.	6	that are entering sumps and being pumped into the plant
7		7	
8	And as far as 180,000 gallons that was	8	system, is part of that influent, part of that projected influent
9	pumped to the sludge lagoon, I didn't you know, I didn't go out and measure that or anything, but that	9	•
	· · · · · · · · · · · · · · · · · · ·	10	THE WITNESS: Yes, it is
10	was that was being done by the District, and I		MR. JOHNSTON: and is it something that
11	didn't independently verify it.	11	would not have existed in the nonflood situation, such
12	DR. WOLF: Okay. Thank you very much.	12	as what you were using as a basis for your modeling; is
13	MR. YOUNG: Mr. Jordan?	13	that correct?
14	MR. JORDAN: Nothing.	14	THE WITNESS: Well, we our models are
15	MR. YOUNG: Mr. Johnston?	15	calibrated based on-site drainage. The rainfall that
16	MR. JOHNSTON: I just have one question.	16	falls on the plant site is included in the calibration,
17	You mentioned that the difference between	17	so we are factoring that in, okay.
18	this event and the various rainfall events on which you	18	The flooding on the plant, the again,
19	based your modeling for the to essentially to	19	there wouldn't be flooding into the the hydraulic
20	replace the missing influent data, was that the earlier	20	grade line was always higher than the flood levels, so
21	events had not involved flooding.	21	it's
22	THE WITNESS: As far as I know, there wasn't	22	MR. JOHNSTON: So there wouldn't be there
23	flooding in	23	wouldn't be
24	MR. JOHNSTON: But that you didn't feel it	24	THE WITNESS: Any
25	needed to be taken into account	25	MR. JOHNSTON: as a result of the flood,
	Page 390		Page 392
	1 age 370		1 age 372
1	THE WITNESS: Right.	1	sump water being pumped into the system, that wouldn't
2	MR. JOHNSTON: because essentially the	2	happen in normal rainfall events, where there is not
3	there was no water coming in from those manholes so	3	flooding in
4	there was stuff coming out?	4	THE WITNESS: Well, in
5	THE WITNESS: Right. The only area that was	5	MR. JOHNSTON: in the plant?
6	flooded, was the area that was spilling.	6	THE WITNESS: normal rainfall events, there
7	MR. JOHNSTON: Now, wasn't the plant itself	7	is some pump flowing into the system.
8	also flooded? And I seem to recall testimony that all	8	MR. JOHNSTON: Right, but there's not flooding?
9	the sump pumps in the plant pumped into the system	9	THE WITNESS: It right.
		10	<u> </u>
10	itself for treatment?	11	MR. JOHNSTON: Okay. So do we have any sense
12	THE WITNESS: Uh-huh, for some period of time I	12	of
	believe.		THE WITNESS: I don't have an estimate of that
13	MR. JOHNSTON: Did you take that volume of	13	volume.
14	water into account in your calculations?	14	MR. JOHNSTON: Okay. Thank you.
15	THE WITNESS: Well, it does not have to be	15	THE WITNESS: I know that it was not pumped
16	because it's just being recirculated. Again, I'm only	16	very long. I know they turned it off.
17	looking at what is leaving the plant.	17	MR. JOHNSTON: How long was it pumped?
18	MR. JOHNSTON: No, I understand. But what I'm	18	THE WITNESS: I think somebody else would have
19	getting at is because nobody disagrees on what was	19	to testify to that.
20	leaving the plant.	20	MR. JOHNSTON: Thank you.
21	THE WITNESS: Okay.	21	THE WITNESS: Okay.
00	MR. JOHNSTON: The question was, what was	22	MR. YOUNG: Mr. Harris?
22	the second secon		
23	coming into that into the top of the plant	23	MR. HARRIS: You testified earlier that you
		23	MR. HARRIS: You testified earlier that you your estimate is that the prosecution's estimate was
23	coming into that into the top of the plant		
23 24	coming into that into the top of the plant THE WITNESS: Correct.	24	your estimate is that the prosecution's estimate was

TRANSCRIPT OF HEARING

		1	
1	THE WITNESS: 400,000 gallons.	1	just
2	MR. HARRIS: 400,000 gallons over?	2	MR. HARRIS: He had one where, I think he took
3	THE WITNESS: Over.	3	the I think, they took the base flow, and added it
4	MR. HARRIS: Did you do a detailed analysis of	4	to the
5	their calculation?	5	MR. YOUNG: Yeah, he added something.
6	THE WITNESS: Yeah, we looked at their	6	MS. MACEDO: Oh, you want
7	calculations and verified the way they did them and	7	THE WITNESS: It was the previous slide, right
8	understood the assumptions that they made.	8	there.
9	MR. HARRIS: And I apologize if you already	9	MS. MACEDO: Oh, you want the green?
10	stated this because it is getting late.	10	MR. YOUNG: Yeah.
11	But in your opinion, what did they do	11	MS. MACEDO: There you go.
12	that created the overestimate of 400,000 gallons?	12	MR. YOUNG: So why is it incorrect to make the
13	THE WITNESS: That that they assumed that	13	assumption that the flow, the I and I into the plant
14	the infiltration inflow would be constant at 4 MGD for	14	is
15	the entire spill period. In other words, that they	15	THE WITNESS: Constant.
16	didn't consider the rainfall pattern. We considered	16	MR. YOUNG: constant in just connecting up
17	that it had stopped raining, and that the flow came	17	the 8.4 for at 10:30 like he did, and then, you know,
18	down, therefore there would have been there was less	18	when everything was up and running again, you still
19	flow reaching the plant than they assumed. That is	19	have got the same kind of treatment through the
20	really it in a nutshell.	20	plant
21	MR. HARRIS: Okay. Thank you.	21	THE WITNESS: Well
22	MR. YOUNG: Okay. Then let me ask you this	22	MR. YOUNG: and doesn't that seem to
23	did you ask him that?	23	indicate that you have got the same amount of water
24	MR. JEFFRIES: I don't know if you did bring up	24	coming into it?
25	that question.	25	THE WITNESS: No, it
	•	2 3	· · · · · · · · · · · · · · · · · · ·
	Page 394		Page 396
1	MR. YOUNG: Can we put up an exhibit, Exhibit	1	MR. YOUNG: What does it indicate then?
2	448? Do you have that?	2	THE WITNESS: Well, what does what indicate?
3	MS. THORME: This is 44.	3	MR. YOUNG: The fact that when they get
4	MR. YOUNG: Of what Mr. Buffleben had testified	4	everything up and running again, they come up to just
5	to.	5	about the same.
6	MS. MACEDO: An exhibit or slide?	6	THE WITNESS: It could be nothing. It could be
7	MS. JAHR: Are you talking about Exhibit 48 or	7	coincidence. Basically, if you look at can you go
8	49 with the pictures?	8	back to my Exhibit 6?
9	MR. YOUNG: It had he had graphs, and he had	9	Okay. So what happens in a sewer system
10	4 MGD at one point, was the last measurement and then		
11	there was a break.	11	does in a creek. So when it stops raining, it goes
12	THE WITNESS: I think that was the first slide	12	down.
13	that I showed.	13	And so what this red line is showing is
14		14	what our model says would have happened. It reaches a
	MR. YOUNG: It might have been.	1	
15	MR. YOUNG: It might have been. THE WITNESS: Yeah.	15	peak right about the time of the pump failure, which is
15 16	THE WITNESS: Yeah.		peak right about the time of the pump failure, which is represented by the blue line shooting down. And then
16	THE WITNESS: Yeah. MR. YOUNG: I wrote down 44 and 48 on the	15 16 17	represented by the blue line shooting down. And then
16 17	THE WITNESS: Yeah. MR. YOUNG: I wrote down 44 and 48 on the bottom right-hand corner. And there is another	16 17	represented by the blue line shooting down. And then it would have come down like this (indicating). They
16 17 18	THE WITNESS: Yeah. MR. YOUNG: I wrote down 44 and 48 on the bottom right-hand corner. And there is another MS. MACEDO: Is it that one?	16	represented by the blue line shooting down. And then it would have come down like this (indicating). They assume that it stayed up like this (indicating).
16 17 18 19	THE WITNESS: Yeah. MR. YOUNG: I wrote down 44 and 48 on the bottom right-hand corner. And there is another MS. MACEDO: Is it that one? THE WITNESS: There is one that shows	16 17 18	represented by the blue line shooting down. And then it would have come down like this (indicating). They assume that it stayed up like this (indicating). What this is, is emptying the drainage.
16 17 18 19 20	THE WITNESS: Yeah. MR. YOUNG: I wrote down 44 and 48 on the bottom right-hand corner. And there is another MS. MACEDO: Is it that one? THE WITNESS: There is one that shows MR. YOUNG: Right. So	16 17 18 19 20	represented by the blue line shooting down. And then it would have come down like this (indicating). They assume that it stayed up like this (indicating). What this is, is emptying the drainage. The emptying is the stored water from the collection
16 17 18 19 20 21	THE WITNESS: Yeah. MR. YOUNG: I wrote down 44 and 48 on the bottom right-hand corner. And there is another MS. MACEDO: Is it that one? THE WITNESS: There is one that shows MR. YOUNG: Right. So MS. MACEDO: Which one do you want?	16 17 18 19 20 21	represented by the blue line shooting down. And then it would have come down like this (indicating). They assume that it stayed up like this (indicating). What this is, is emptying the drainage. The emptying is the stored water from the collection system. And also a draining back by this time, the
16 17 18 19 20 21 22	THE WITNESS: Yeah. MR. YOUNG: I wrote down 44 and 48 on the bottom right-hand corner. And there is another MS. MACEDO: Is it that one? THE WITNESS: There is one that shows MR. YOUNG: Right. So MS. MACEDO: Which one do you want? THE WITNESS: Yeah.	16 17 18 19 20	represented by the blue line shooting down. And then it would have come down like this (indicating). They assume that it stayed up like this (indicating). What this is, is emptying the drainage. The emptying is the stored water from the collection system. And also a draining back by this time, the spill had stopped and the ground was very saturated and
16 17 18 19 20 21 22 23	THE WITNESS: Yeah. MR. YOUNG: I wrote down 44 and 48 on the bottom right-hand corner. And there is another MS. MACEDO: Is it that one? THE WITNESS: There is one that shows MR. YOUNG: Right. So MS. MACEDO: Which one do you want? THE WITNESS: Yeah. MR. HARRIS: Go to the next one.	16 17 18 19 20 21 22 23	represented by the blue line shooting down. And then it would have come down like this (indicating). They assume that it stayed up like this (indicating). What this is, is emptying the drainage. The emptying is the stored water from the collection system. And also a draining back by this time, the spill had stopped and the ground was very saturated and it was they were drawing it back in.
16 17 18 19 20 21 22 23 24	THE WITNESS: Yeah. MR. YOUNG: I wrote down 44 and 48 on the bottom right-hand corner. And there is another MS. MACEDO: Is it that one? THE WITNESS: There is one that shows MR. YOUNG: Right. So MS. MACEDO: Which one do you want? THE WITNESS: Yeah. MR. HARRIS: Go to the next one. MS. MACEDO: This one?	16 17 18 19 20 21 22 23 24	represented by the blue line shooting down. And then it would have come down like this (indicating). They assume that it stayed up like this (indicating). What this is, is emptying the drainage. The emptying is the stored water from the collection system. And also a draining back by this time, the spill had stopped and the ground was very saturated and it was they were drawing it back in. Once the sewer system had caught up and
16 17 18 19 20 21 22 23	THE WITNESS: Yeah. MR. YOUNG: I wrote down 44 and 48 on the bottom right-hand corner. And there is another MS. MACEDO: Is it that one? THE WITNESS: There is one that shows MR. YOUNG: Right. So MS. MACEDO: Which one do you want? THE WITNESS: Yeah. MR. HARRIS: Go to the next one.	16 17 18 19 20 21 22 23	represented by the blue line shooting down. And then it would have come down like this (indicating). They assume that it stayed up like this (indicating). What this is, is emptying the drainage. The emptying is the stored water from the collection system. And also a draining back by this time, the spill had stopped and the ground was very saturated and it was they were drawing it back in.

```
was a gradient with the groundwater, and that
                                                               1
                                                                         MR. HARRIS: A couple hundred thousand?
2
     groundwater comes in. And so that is why this is as
                                                               2
                                                                         THE WITNESS: A couple hundred thousand, yes.
3
                                                               3
     high as it is back here.
                                                                         MR. HARRIS: So on your graph though, you were
4
          MR. YOUNG: Okay. Mr. Harris?
                                                               4
                                                                    talking about storage. But if you look at your blue
5
                                                               5
          MR. HARRIS: Did you -- as part of your
                                                                   lines -- the blue line, which was the F1. It's really
 6
     modeling efforts, did you calculate the storage volume
                                                               6
                                                                    low, right?
7
                                                               7
     of main trump lines and the lateral stuff to the point
                                                                         THE WITNESS: Yeah.
8
                                                               8
     where the spills occurred out of the manhole covers?
                                                                         MR. HARRIS: And then all of a sudden, once the
9
          THE WITNESS: That was done by the District.
                                                               9
                                                                    plant you said started to empty the storage, it goes
10
          MR. HARRIS: And do you know what that number
                                                              10
                                                                    from almost nothing, back up to almost --
11
                                                              11
     is --
                                                                         THE WITNESS: This is still spilling --
12
          THE WITNESS: It's --
                                                              12
                                                                         MR. HARRIS: -- seven and a
13
                                                              13
          MR. HARRIS: -- in terms of what the storage
                                                                   half.
14
                                                              14
     capacity was?
                                                                         THE WITNESS: -- this is still spilling during
15
                                                              15
          THE WITNESS: It was it was about 200,000
                                                                   this whole period. As long as my red line, the flow
16
                                                              16
                                                                    coming in is greater than the flow going out, the spill
     gallons.
17
                                                              17
                                                                   is still occurring.
          MR. HARRIS: So up to the point where the
18
                                                              18
     manholes were popping --
                                                                             Okay. And then at this point, what it is
          THE WITNESS: Well --
19
                                                              19
                                                                    saying is that the amount of flow coming into the plant
20
                                                              20
          MR. HARRIS: -- so to speak, it was -- the
                                                                   is equal to what they are pumping.
21
     storage was 200,000 gallons?
                                                              21
                                                                             Okay. Now, at this point though, the
22
          THE WITNESS: Well, there was an initial number
                                                              22
                                                                   system is full, so they have to continue -- and
23
                                                                   actually at this point, for -- between 6:00 p.m. and
     of 180,000 gallons that the District presented, I
                                                              23
24
     think, in some earlier submittals. That was the
                                                              24
                                                                    10:00 p.m., there was some small amount of overflow
25
                                                              25
     storage from when the spill started, the pipes were
                                                                   still occurring because the system was still elevated,
                                                   Page 398
                                                                                                                  Page 400
                                                               1
     about half full or so, up through the point where the
                                                                    okav.
2
     spill would start. And that was used to estimate that
                                                               2
                                                                             So by about 10:00 is when the spill
     it would take about a half an hour, and it was about
3
                                                               3
                                                                   stopped. And they had to keep pumping at a high level
4
                                                               4
     180,000 gallons.
                                                                   to draw down the stored volume, and as I mentioned,
5
                                                               5
              Okay. Subsequent to that, in discussions
                                                                   to -- they were essentially draining the soils in the
6
     with me, I said, well, the levels kept rising above
                                                               6
                                                                   vicinity. Even after the spill stopped, there was a
7
                                                               7
     that. There was additional storage in the system.
                                                                   lot of groundwater in the trenches and the sewer
8
                                                               8
     Just because the spill started, you know -- they lost
                                                                    trenches and the ground around the sewers that's still
9
                                                               9
     the head on top of that.
                                                                    near the ground level. And the hydraulic gray line is
10
              So they did another assessment. They
                                                              10
                                                                   being dropped dramatically at this point, because it's
11
     added the manhole volumes, and that ended up, I think
                                                                   caught up, and then that creates a gradient. And so
                                                              11
                                                                    the sewer comes to the drain, and so they have to keep
12
     being a little closer to 200,000 or so.
                                                              12
13
                                                              13
          MR. HARRIS: So if you took the maximum at the
                                                                    pumping and pumping until they actually are draining
14
     peak, right when the rain shut off, the maximum storage
                                                              14
                                                                    the trenches, as well as the water in the sewer.
     that could be calculated for the laterals and the trump
15
                                                              15
                                                                             And they are draining the sewer down to a
16
     lines, would have been --
                                                              16
                                                                   very low value. Whereas, when they started, it was at
17
                                                              17
          THE WITNESS: The storage above --
                                                                   a high value, and the pipes were fuller. But they
18
          MR. HARRIS: -- 200,000?
                                                              18
                                                                    dropped it down actually, to the point where they are
19
          THE WITNESS: -- yes, the storage above that.
                                                              19
                                                                   completely caught up in the middle of the night when
20
                                                              20
          MR. HARRIS: I mean when the sewer plant, all
                                                                   flows are very low, and the depths in the sewers are
21
     the way to the very last manhole that is popping in the
                                                              21
                                                                   very low at that point. So that is additional volume
22
                                                              22
     system, the highest elevation, and if you look at all
                                                                   that had to be pumped down.
23
     trump lines and all the laterals, what would your
                                                              23
                                                                         MR. HARRIS: Okay. Thank you.
                                                              24
24
                                                                         THE WITNESS: Okay.
     storage be at that point?
25
          THE WITNESS: Well, that is what they would --
                                                              25
                                                                         MR. YOUNG: Any other board questions?
                                                   Page 399
                                                                                                                  Page 401
```

TRANSCRIPT OF HEARING

1	Okay. Thank you.	1	being pumped.
2	MR. JEFFRIES: I do have one.	2	And I can't testify to what was going on
3	MR. YOUNG: Mr. Jeffries?	3	here, but it is pretty clear to me that there was some
4	MR. JEFFRIES: How long do you think that the	4	problems getting some pumping on-line because
5	overflows from the manholes duration time were? Did	5	immediately it shot right up. So something happened at
6	you calculate that?	6	that point, and they got caught up and at that point
7	THE WITNESS: Well, we I mean, this is	7	they drained the system back down.
8	evidence that was from the 11:00 to 10:00 p.m	8	So I did not estimate the volume of the
9	MR. JEFFRIES: Right.	9	spill on the 20th, okay. That was not part of what I
10	THE WITNESS: and that is consistent with	10	did. That was estimated by the District based on their
11	this, and what we show is	11	observations of flows out of the manholes.
12	MR. JEFFRIES: Well, let me just	12	MR. JEFFRIES: Now, the information that you
13	THE WITNESS: Yes, go ahead.	13	calculated was provided by the District?
14	MR. JEFFRIES: go a little bit further,	14	THE WITNESS: Only the storage volumes. I
15	because there was evidence shown that the next day,	15	calculated I did the modeling, and I calculated the
16	there was still	16	amount of flow that would have overflowed if none of it
17	THE WITNESS: Okay.	17	had been stored, which was about 1.1 million gallons,
18	MR. JEFFRIES: the manholes were still	18	okay?
19	showing there was discharge from different manholes?	19	And so you start with that. And then we
20	THE WITNESS: Yes.	20	know that 180,000 gallons was pumped out into the
21	MR. JEFFRIES: And so to me it looks and you	21	sludge. So you subtract that. We know there was
22	said that you were trying to dispute there was a	22	some obviously, the filling of the collection system
23	straight line of the numbers, because it had dropped.	23	overflow. That later came back and got treated, and
24	Well, if that was the case, then why were we still	24	that is about 200,000.
25	having discharge from those manholes?	25	So those are the two major factors that
	Page 402		Page 404
1	THE WITNESS: Okay. If you're talking about	1	go from the 1.1 million that I computed, to the
2	the 20th?	2	approximately 700,000 gallons you have to subtract in
3	MR. JEFFRIES: The following day.	3	that storage.
4	THE WITNESS: The following day.	4	And the storage again, the storage
5	So here's the following day. What the	5	volume estimates were done by the District. That is
6	model shows in the effluent, is that right around that	6	the only part of this analysis that I used District
7	point in time, that should be sometime after midnight	7	information for.
8	maybe. I'm not sure of the exact time shown here, but	8	MR. JEFFRIES: I understand. But the
9	they are about equal, okay. And they have caught up	9	prosecution team showed that the analysis done by the
10	basically.	10	District probably or might be erroneous because of
11	Now, here you can see rainfall the	11	the graphs and the information of the manholes that
12	colors a little funny but it did rain on the next	12	shows the discharge.
13	day, and the prosecution team mentioned that as well.	13	THE WITNESS: Okay. Let's be clear on that.
14	And that is the rainfall there. So that causes us	14	Now, the District did a completely separate calculation
15	to that caused the flow to increase a little more	15	of overflows based on manhole-by-manhole estimates,
16	than it would have.	16	okay.
17	You can see that well, you probably	17	MR. JEFFRIES: Right. Did you use
18	can't see, but this is the normal dry-weather flow line	18	THE WITNESS: I didn't use any of that.
19	here. And so the flow didn't get back to the normal	19	MR. JEFFRIES: Okay.
20	dry-flow line because of groundwater infiltration.	20	THE WITNESS: except for a minor amount of
21	But then at this point, there is a little	21	it for well, for the spill on the 20th, okay. I did
		22	on you were just asking about the next day.
22	bit of rainfall and infiltration as well, and that is	44	on you were just asking about the next day.
22 23	bit of rainfall and infiltration as well, and that is causing this to rise. And as I mentioned earlier, the	23	
	causing this to rise. And as I mentioned earlier, the		MR. JEFFRIES: Right.
23	causing this to rise. And as I mentioned earlier, the reason that there were some overflows on that morning,	23	MR. JEFFRIES: Right. THE WITNESS: And the spill between 6:00 p.m.
23 24	causing this to rise. And as I mentioned earlier, the	23 24	MR. JEFFRIES: Right.

TRANSCRIPT OF HEARING

1	low. By then we had caught up, and so my lines had	1	is the District's estimate is spill on the following
2	crossed. So it is a very small amount, okay. It	2	day, I believe is the same number that the prosecution
3	doesn't affect the results that much.	3	team used for that. So I don't think that they
4	What I did use from the District that is	4	mentioned that they thought it was higher, but I never
5	important here, is the volume pumped to the sludge	5	saw any other numbers.
6	drying beds, which have nothing to do with the	6	DR. WOLF: Okay. Thank you.
7	anything that the prosecution team is commenting on.	7	MR. YOUNG: Okay. So that completes this
8	In fact, I don't think there is any dispute about this	8	witness.
9	volume, and I have not really heard anything that	9	
10		10	MS. THORME: Thank you, again. He has to run
11	question these volumes as well.	11	to catch a flight.
	MR. JEFFRIES: I don't think the 180,000 is in		MR. YOUNG: Okay.
12	dispute.	12	MS. THORME: So can we take a dinner break,
13	THE WITNESS: Right. And the storage in the	13	possibly?
14	system well, we have not heard any dispute on that.	14	MS. MACEDO: No problem.
15	I think that was generally accepted.	15	MR. JORDAN: No.
16	What the prosecution team did was to	16	MS. THORME: Yes.
17	allow for that by starting the calculations at noon	17	MS. MACEDO: I'm fine with it.
18	instead of at 10:30, which is a very incorrect way to	18	(Discussion held off the record.)
19	do we actually use pipe configurations and	19	(Dinner break.)
20	elevations to compute this volume.	20	MR. YOUNG: All right. Let's go back on the
21	MR. JEFFRIES: All right. Thank you.	21	record.
22	THE WITNESS: Okay.	22	We will begin with our public comment
23	MR. YOUNG: Mr. Harris?	23	cards. Everyone will have three minutes to address the
24	MR. HARRIS: Just a quick question.	24	board.
25	The 674 is your model calculated spill	25	Allen Mayer (phonetic), are you still
	Page 406		Page 408
	8		8
1	volume?	1	here?
2	THE WITNESS: Okay. Mostly what I did was this	2	Okay. He's not.
	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers		Okay. He's not. Okay. Greg Cobb?
2	THE WITNESS: Okay. Mostly what I did was this	2	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes.
2	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers	2 3	Okay. He's not. Okay. Greg Cobb?
2 3 4	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one	2 3 4	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes.
2 3 4 5	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million	2 3 4 5	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen
2 3 4 5 6	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million THE WITNESS: No. No, that is not the estimate	2 3 4 5 6	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen White, and then I don't see Gordon Henley. Gordon
2 3 4 5 6 7	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million THE WITNESS: No. No, that is not the estimate of the spill. That is the estimate of the difference	2 3 4 5 6 7	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen White, and then I don't see Gordon Henley. Gordon Henley is not here, is he?
2 3 4 5 6 7 8	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million THE WITNESS: No. No, that is not the estimate of the spill. That is the estimate of the difference between the influent and effluent between this period of time.	2 3 4 5 6 7 8	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen White, and then I don't see Gordon Henley. Gordon Henley is not here, is he? MR. JEFFRIES: He was here earlier. MR. YOUNG: He's not here now. And then Joe
2 3 4 5 6 7 8	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million THE WITNESS: No. No, that is not the estimate of the spill. That is the estimate of the difference between the influent and effluent between this period of time. We know that there was some storage, and	2 3 4 5 6 7 8 9	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen White, and then I don't see Gordon Henley. Gordon Henley is not here, is he? MR. JEFFRIES: He was here earlier. MR. YOUNG: He's not here now. And then Joe Shackler. Okay. That will be the third speaker.
2 3 4 5 6 7 8 9	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million THE WITNESS: No. No, that is not the estimate of the spill. That is the estimate of the difference between the influent and effluent between this period of time. We know that there was some storage, and so these are subtractive values from that. There is	2 3 4 5 6 7 8	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen White, and then I don't see Gordon Henley. Gordon Henley is not here, is he? MR. JEFFRIES: He was here earlier. MR. YOUNG: He's not here now. And then Joe
2 3 4 5 6 7 8 9 10	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million THE WITNESS: No. No, that is not the estimate of the spill. That is the estimate of the difference between the influent and effluent between this period of time. We know that there was some storage, and so these are subtractive values from that. There is also some additional values for the spill on the next	2 3 4 5 6 7 8 9 10	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen White, and then I don't see Gordon Henley. Gordon Henley is not here, is he? MR. JEFFRIES: He was here earlier. MR. YOUNG: He's not here now. And then Joe Shackler. Okay. That will be the third speaker. Okay.
2 3 4 5 6 7 8 9 10 11 12 13	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million THE WITNESS: No. No, that is not the estimate of the spill. That is the estimate of the difference between the influent and effluent between this period of time. We know that there was some storage, and so these are subtractive values from that. There is also some additional values for the spill on the next day.	2 3 4 5 6 7 8 9 10 11	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen White, and then I don't see Gordon Henley. Gordon Henley is not here, is he? MR. JEFFRIES: He was here earlier. MR. YOUNG: He's not here now. And then Joe Shackler. Okay. That will be the third speaker. Okay. UNIDENTIFIED SPEAKER: There should be one up there for Barbara Mann, too.
2 3 4 5 6 7 8 9 10 11 12 13 14	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million THE WITNESS: No. No, that is not the estimate of the spill. That is the estimate of the difference between the influent and effluent between this period of time. We know that there was some storage, and so these are subtractive values from that. There is also some additional values for the spill on the next day. MR. HARRIS: So what is your total volume	2 3 4 5 6 7 8 9 10 11 12	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen White, and then I don't see Gordon Henley. Gordon Henley is not here, is he? MR. JEFFRIES: He was here earlier. MR. YOUNG: He's not here now. And then Joe Shackler. Okay. That will be the third speaker. Okay. UNIDENTIFIED SPEAKER: There should be one up there for Barbara Mann, too. MR. YOUNG: Pardon?
2 3 4 5 6 7 8 9 10 11 12 13 14 15	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million THE WITNESS: No. No, that is not the estimate of the spill. That is the estimate of the difference between the influent and effluent between this period of time. We know that there was some storage, and so these are subtractive values from that. There is also some additional values for the spill on the next day. MR. HARRIS: So what is your total volume spill?	2 3 4 5 6 7 8 9 10 11 12 13 14	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen White, and then I don't see Gordon Henley. Gordon Henley is not here, is he? MR. JEFFRIES: He was here earlier. MR. YOUNG: He's not here now. And then Joe Shackler. Okay. That will be the third speaker. Okay. UNIDENTIFIED SPEAKER: There should be one up there for Barbara Mann, too. MR. YOUNG: Pardon? UNIDENTIFIED SPEAKER: Barbara Mann.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million THE WITNESS: No. No, that is not the estimate of the spill. That is the estimate of the difference between the influent and effluent between this period of time. We know that there was some storage, and so these are subtractive values from that. There is also some additional values for the spill on the next day. MR. HARRIS: So what is your total volume spill? THE WITNESS: Right here, 600	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen White, and then I don't see Gordon Henley. Gordon Henley is not here, is he? MR. JEFFRIES: He was here earlier. MR. YOUNG: He's not here now. And then Joe Shackler. Okay. That will be the third speaker. Okay. UNIDENTIFIED SPEAKER: There should be one up there for Barbara Mann, too. MR. YOUNG: Pardon? UNIDENTIFIED SPEAKER: Barbara Mann. MR. YOUNG: Yeah, I'm just reading the next
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million THE WITNESS: No. No, that is not the estimate of the spill. That is the estimate of the difference between the influent and effluent between this period of time. We know that there was some storage, and so these are subtractive values from that. There is also some additional values for the spill on the next day. MR. HARRIS: So what is your total volume spill? THE WITNESS: Right here, 600 MR. HARRIS: Oh, okay. You've answered my	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen White, and then I don't see Gordon Henley. Gordon Henley is not here, is he? MR. JEFFRIES: He was here earlier. MR. YOUNG: He's not here now. And then Joe Shackler. Okay. That will be the third speaker. Okay. UNIDENTIFIED SPEAKER: There should be one up there for Barbara Mann, too. MR. YOUNG: Pardon? UNIDENTIFIED SPEAKER: Barbara Mann. MR. YOUNG: Yeah, I'm just reading the next three in line, so people know when they're going to
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million THE WITNESS: No. No, that is not the estimate of the spill. That is the estimate of the difference between the influent and effluent between this period of time. We know that there was some storage, and so these are subtractive values from that. There is also some additional values for the spill on the next day. MR. HARRIS: So what is your total volume spill? THE WITNESS: Right here, 600 MR. HARRIS: Oh, okay. You've answered my question.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen White, and then I don't see Gordon Henley. Gordon Henley is not here, is he? MR. JEFFRIES: He was here earlier. MR. YOUNG: He's not here now. And then Joe Shackler. Okay. That will be the third speaker. Okay. UNIDENTIFIED SPEAKER: There should be one up there for Barbara Mann, too. MR. YOUNG: Pardon? UNIDENTIFIED SPEAKER: Barbara Mann. MR. YOUNG: Yeah, I'm just reading the next three in line, so people know when they're going to speak.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million THE WITNESS: No. No, that is not the estimate of the spill. That is the estimate of the difference between the influent and effluent between this period of time. We know that there was some storage, and so these are subtractive values from that. There is also some additional values for the spill on the next day. MR. HARRIS: So what is your total volume spill? THE WITNESS: Right here, 600 MR. HARRIS: Oh, okay. You've answered my question. THE WITNESS: and 74.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen White, and then I don't see Gordon Henley. Gordon Henley is not here, is he? MR. JEFFRIES: He was here earlier. MR. YOUNG: He's not here now. And then Joe Shackler. Okay. That will be the third speaker. Okay. UNIDENTIFIED SPEAKER: There should be one up there for Barbara Mann, too. MR. YOUNG: Pardon? UNIDENTIFIED SPEAKER: Barbara Mann. MR. YOUNG: Yeah, I'm just reading the next three in line, so people know when they're going to speak. Okay. So folks, three minutes. Go
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million THE WITNESS: No. No, that is not the estimate of the spill. That is the estimate of the difference between the influent and effluent between this period of time. We know that there was some storage, and so these are subtractive values from that. There is also some additional values for the spill on the next day. MR. HARRIS: So what is your total volume spill? THE WITNESS: Right here, 600 MR. HARRIS: Oh, okay. You've answered my question. THE WITNESS: and 74. MR. HARRIS: All right. Thank you.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen White, and then I don't see Gordon Henley. Gordon Henley is not here, is he? MR. JEFFRIES: He was here earlier. MR. YOUNG: He's not here now. And then Joe Shackler. Okay. That will be the third speaker. Okay. UNIDENTIFIED SPEAKER: There should be one up there for Barbara Mann, too. MR. YOUNG: Pardon? UNIDENTIFIED SPEAKER: Barbara Mann. MR. YOUNG: Yeah, I'm just reading the next three in line, so people know when they're going to speak. Okay. So folks, three minutes. Go ahead.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million THE WITNESS: No. No, that is not the estimate of the spill. That is the estimate of the difference between the influent and effluent between this period of time. We know that there was some storage, and so these are subtractive values from that. There is also some additional values for the spill on the next day. MR. HARRIS: So what is your total volume spill? THE WITNESS: Right here, 600 MR. HARRIS: Oh, okay. You've answered my question. THE WITNESS: and 74. MR. HARRIS: All right. Thank you. MR. YOUNG: Dr. Wolf?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen White, and then I don't see Gordon Henley. Gordon Henley is not here, is he? MR. JEFFRIES: He was here earlier. MR. YOUNG: He's not here now. And then Joe Shackler. Okay. That will be the third speaker. Okay. UNIDENTIFIED SPEAKER: There should be one up there for Barbara Mann, too. MR. YOUNG: Pardon? UNIDENTIFIED SPEAKER: Barbara Mann. MR. YOUNG: Yeah, I'm just reading the next three in line, so people know when they're going to speak. Okay. So folks, three minutes. Go ahead. MR. COBB: I want to thank the board for
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million THE WITNESS: No. No, that is not the estimate of the spill. That is the estimate of the difference between the influent and effluent between this period of time. We know that there was some storage, and so these are subtractive values from that. There is also some additional values for the spill on the next day. MR. HARRIS: So what is your total volume spill? THE WITNESS: Right here, 600 MR. HARRIS: Oh, okay. You've answered my question. THE WITNESS: and 74. MR. HARRIS: All right. Thank you. MR. YOUNG: Dr. Wolf? DR. WOLF: It says to be clear, your	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen White, and then I don't see Gordon Henley. Gordon Henley is not here, is he? MR. JEFFRIES: He was here earlier. MR. YOUNG: He's not here now. And then Joe Shackler. Okay. That will be the third speaker. Okay. UNIDENTIFIED SPEAKER: There should be one up there for Barbara Mann, too. MR. YOUNG: Pardon? UNIDENTIFIED SPEAKER: Barbara Mann. MR. YOUNG: Yeah, I'm just reading the next three in line, so people know when they're going to speak. Okay. So folks, three minutes. Go ahead. MR. COBB: I want to thank the board for MR. HARRIS: Is the microphone on?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: So estimate of the spill is one million THE WITNESS: No. No, that is not the estimate of the spill. That is the estimate of the difference between the influent and effluent between this period of time. We know that there was some storage, and so these are subtractive values from that. There is also some additional values for the spill on the next day. MR. HARRIS: So what is your total volume spill? THE WITNESS: Right here, 600 MR. HARRIS: Oh, okay. You've answered my question. THE WITNESS: and 74. MR. HARRIS: All right. Thank you. MR. YOUNG: Dr. Wolf? DR. WOLF: It says to be clear, your 400,000-gallon difference, does include the spill of	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	Okay. He's not. Okay. Greg Cobb? MR. COBB: Yes. MR. YOUNG: Okay. He will be followed by Karen White, and then I don't see Gordon Henley. Gordon Henley is not here, is he? MR. JEFFRIES: He was here earlier. MR. YOUNG: He's not here now. And then Joe Shackler. Okay. That will be the third speaker. Okay. UNIDENTIFIED SPEAKER: There should be one up there for Barbara Mann, too. MR. YOUNG: Pardon? UNIDENTIFIED SPEAKER: Barbara Mann. MR. YOUNG: Yeah, I'm just reading the next three in line, so people know when they're going to speak. Okay. So folks, three minutes. Go ahead. MR. COBB: I want to thank the board for MR. HARRIS: Is the microphone on? MR. YOUNG: It is.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	THE WITNESS: Okay. Mostly what I did was this number, okay (indicating)? These numbers MR. HARRIS: Is the microphone on? MR. YOUNG: It is.

that at all.

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

MR. COBB: My name is Greg Cobb. I live at 559
Honolulu Avenue in Oceano. And I'm about 300 feet from
the front entrance of the Sanitation District Plant, so
I have firsthand knowledge of what happened on the day
of the 19th, obviously.

And the first thing I'd like to comment
about is that plant is built on a very low-lying area

And the first thing I'd like to comment about is that plant is built on a very low-lying area that is surrounded by water. And in my understanding of when I toured the plant about six months ago, there is 40-foot-deep water well around the headworks area, because the water table in that area is very high. It's within three or four feet of grade on every time of the year anymore. So infiltration of water into that area is, I'm assuming, pretty common.

It's obvious from the testimony that the plant has major malfunctions. In my opinion, they were avoidable had certain maintenance things been done.

I don't believe that this rain event -- I

have been there almost 20 years -- I don't see that this rain event was anything more than a seven- or a ten-year event. We have had rain like that numerous times in the past. It's never caused these kinds of problems before. And I was just sometimes flabbergasted to find out about the amount of problems and lack of pump operation and numerous things at the

six hours prior to the event at approximately 10:30 a.m. that morning. So there is substantial amount of I and I that probably entered the system.

The 8.4 MGD that was stated when the
plant failed at 10:30. My witness account of that was
that the water coming out of the manholes, even though
the street had water over the top of it, was almost
negligible. I couldn't even perceive it was a problem
that time.

The peak of the water coming out of the flow rate, seemed to happen about 2:00 -- 1:30 or 2:00. That is when the manholes were substantially overflowing. It was very obvious. It was up at -- to well over -- I think off the charts. It had shown it was like 275 gallons per minute, I believe. That manhole from my house was spilling more than that at 2:00 in the afternoon. So I --

MR. YOUNG: Mr. Cobb, your three minutes is up. Can you just conclude it?

MR. COBB: All right. I'd like to conclude
that the peak of that outflow was more like 10 MGD, and
their constant MGD was probably a more accurate
representation. Thank you very much.

MR. YOUNG: Thank you for your comments. Karen White?

Page 410

Page 412

plant in all of this testimony today.

I do want to thank all the operators at the plant, at the time of the spill. It sounds like they did a heck of a job trying to contain the spill in getting that plant up and running.

One of the things I do want to comment about is I didn't have a nice comment at the end of all the testimony today, but obviously it's getting late and a lot of us have families and we would like to go home.

One of the things I would like to comment about is on the IRNC report, the person that testified -- I don't remember his name -- stated there was no floodwater over any of the manholes prior to the event of the plant failure when the pump shut down. And that is absolutely not true.

In our neighborhood of that area, there is probably at least five or six manholes. And there is one directly in front of my house. And those manholes are -- it only takes half an inch of rain to cover those manholes.

And at that period in time, those manholes were probably under water. I know on Security Court and in front of my house and out on Aloha, those manholes were probably underwater for hours, five or Page 411

1 MS. WHITE: Good evening. Karen White, 1566 2 (inaudible) Lane, Halcyon, H-a-l-c-y-o-n.

I am a member of the Community District Service, but I'm speaking only for myself tonight.

I heard nothing -- I have been here all day and I have heard nothing about what caused the flood. The flood wasn't caused by the sewer plant. The flood was not caused by the manholes overflowing. The flood was caused by the Oceano Lagoon at Meadow Creek, which runs in Grover Beach and Arroyo Grande and the back of Arroyo Grande. That was the water that came in and flooded the plant. You have not discussed

Now, there would not have been a flood had San Luis Obispo County Flood Control done their job. You're not looking at them. But they are the ones that failed to open up the floodgate, the weir -- it's really a weir -- between the Oceano Lagoon and the lower swamp area down there where the people live and where the plant is. It's all swamp, but -- and you wonder why the water started disappearing.

Well, at 3:00 a.m., approximately, on
Monday morning when the tide went out, they got the
weir open, and they drained the water into the creek
channel right at the ocean. Nobody is looking at any

```
of that. And that is all a major contributing factor.
                                                                     is waiting for me. So what you're doing is, now you're
2
     There wouldn't have been a flood.
                                                                2
                                                                     saying that We're going to fine you for something else.
3
                                                                3
              And the lady that I would object to
                                                                    That just does not make sense to me.
4
     talking today who said that there would have been a
                                                                             The 4 million or the 5 million dollars,
5
     challenge with the sewer plant with the flood. No,
                                                                5
                                                                    that is our money. The ability to pay, does not make
6
     there wouldn't have been, because even if the pump had
                                                                6
                                                                     any difference. That is our money. The rates --
7
                                                                7
     shorted out, they would be able to open that valve that
                                                                     talking about the rates. That is our money.
8
                                                                8
     was not buried by sewer water, because it was not the
                                                                             I gave you a copy of what I wanted to
9
     rain. It was not the Arroyo Grande Creek. It was not
                                                                9
                                                                     read tonight. You each have it. I want to pick a
                                                               10
10
     the manholes. All that was superfluous, it was the
                                                                     couple of paragraphs out of it, and this is the main
11
     lagoon. The lagoon just completely rose. Anyway --
                                                               11
                                                                    one.
12
     and if you want to know more about that, go to 101A
                                                               12
                                                                             Another concern is the loss of wildlife
13
     (phonetic).
                                                               13
                                                                    habitat for most of the Meadow Creek Lagoon. Not from
14
              And I think it's really sad that you're
                                                               14
                                                                     the sewage spill, but from progressive siltation
15
                                                               15
     considering taking 1.3 plus million dollars from me,
                                                                     buildup.
16
     because that is my money. And it is my money that
                                                               16
                                                                             Not long ago there was an abundance of
     should go to correct the Oceano Lagoon and should
                                                               17
                                                                     egret tarons (phonetic) and other rare birds. In
18
     correct the weir. And should correct the water coming
                                                                    addition to the birds, there was an abundance of
                                                               18
19
     from the San Luis Hills into Meadow Creek that runs
                                                               19
                                                                     turtles, snakes and other water creatures. The birds
20
                                                               20
     into the lagoon that comes clear to Oceano.
                                                                    are no longer there. The water creatures, they are
                                                               21
21
              And without that, we're going to have
22
     another flood, and I will guarantee the sewer plant
                                                               22
                                                                             So if the State parks wants to protect
23
                                                               23
     will be flooded again, and they're going to be in
                                                                    the creatures in the lagoon, they failed. There has
24
     trouble. But it is not their fault.
                                                               24
                                                                     been no maintenance. We don't need more studies. We
25
                                                               2.5
                                                                     don't need consultants. How about taking the time and
             Anyway, that is my complaint and thank
                                                    Page 414
                                                                                                                    Page 416
                                                                     go down to see -- as Karen White just said -- what the
1
     you.
                                                                1
                                                                2
2
                                                                    main problem of the flooding is -- the County, State
          MR. YOUNG: Thank you for your comments,
                                                                3
3
     Ms. White.
                                                                     parks.
4
                                                                4
              Joe Sharker? And then is Brad Snook
                                                                              Of course, the sanitation plant is no
5
                                                                5
     here?
                                                                    help, because they didn't do certain things right. But
6
          MR. SNOOK: Here.
                                                                6
                                                                    you're missing the boat. You've got your head in the
7
                                                                7
          MR. YOUNG: Okav. And then is Jennifer Josack
                                                                    sand. We need agencies to come together. I challenge
                                                                8
8
     (phonetic) here?
                                                                     you to get with all the agencies involved. You're
9
                                                                9
          UNIDENTIFIED SPEAKER: She was here.
                                                                    concerned about water quality. Go down and look what
10
          MR. YOUNG: Okay. She's gone?
                                                               10
                                                                    it has done to the lagoon. It has driven all the
11
          UNIDENTIFIED SPEAKER: Yeah.
                                                               11
                                                                    habitat -- I used to have all water in front of my
12
          MR. YOUNG: Okay.
                                                               12
                                                                     house. There is none there now. It is all reeds and

     Surf Rider Foundation.
                                                               10
                                                                    Foundation has been asking for an investigation for one
11
              I would say that the discharge permit
                                                               11
                                                                    and a half years. And somebody needs to find out
12
     that the Sanitation District that they hold, is a
                                                               12
                                                                    whether malfeasance played a role in the South San Luis
13
     privilege. And when there is a violation that happens
                                                               13
                                                                    Obispo County Sanitation District.
14
                                                               14
     and sewage discharges into the ocean, that is an
                                                                             If you support reduced fines in this
     illegal act. So the District needs to be held to an
15
                                                               15
                                                                    case, you compromise the legislature and management
16
     illegal act.
                                                               16
                                                                    with sewage discharge in our county and in our state.
17
                                                               17
                                                                    If you support a reduced fine in this case, you prevent
              This is the first opportunity for our
18
     chapter to speak to a government agency that is
                                                               18
                                                                    another opportunity for the District taxpayers to hold
19
     interested in quantifying and publicly disclosing the
                                                               19
                                                                    the sanitation District responsible.
20
                                                               20
     effects of mismanagement in the South San Luis County
                                                                             Surfrider Foundation requests you uphold
21
     Sanitation District.
                                                               21
                                                                    the fine set by the Water Board, not the prosecutors.
22
                                                               22
                                                                    We also ask for your assistance in establishing an SEP
              For over a year and a half, our chapter
23
                                                               23
     has been asking both the District board of directors
                                                                    (phonetic), whereby one half of the fine can be passed
24
     and the stakeholder city councils to authorize an
                                                               24
                                                                    to the County for our water quality testing.
25
                                                               25
     independent investigation of potential malfeasances of
                                                                             After all, with the District ocean --

                                                                                                                  Page 420
                                                                    beachgoers in San Luis Bay from around the world, have
1
     our wastewater treatment plant.
                                                               1
2
              Our request for an investigation would
                                                               2
                                                                    suffered compromised environmental health and until the
3
     make good, logical sense following public disclosures
                                                                3
                                                                    water quality can be measured on a more realtime basis,
4
     by whistle-blowers and a thorough, transparent
                                                                4
                                                                    the County's program represents the well established
5
                                                                5
     investigation of operational and financial actions that
6
     would benefit both the District and the public they
                                                                6
                                                                        MR. YOUNG: Can you please conclude?
7
                                                               7
     serve.
                                                                        MR. SNOOK: I will.
8
                                                               8
                                                                             There is another more general point to be
              Trust is important where environmental
9
                                                               9
     health is concerned. If beachgoers can't trust the way
                                                                    made regarding sewage plants that are built in flood
     water quality is measured, how can we trust the actions
                                                                    plains, and/or within a tsunami zone.
10
                                                               10
11
                                                               11
                                                                         MR. YOUNG: Well, conclusion --
     of those responsible for managing it.
12
                                                               12
              With the sanitation District ignoring
                                                                         MR. SNOOK: Oh, okay.
13
                                                               13
     three separate investigations by a private
                                                                        MR. YOUNG: -- mean, wrap it up in a sentence

     investigator, the San Luis Obispo County civil grand
                                                               14
                                                                    or two.
     jury and by an internally appointed peer review
15
                                                               15
                                                                         MR. SNOOK: Okay. Doesn't a plant that meets
16
     committee, all recommending the change in leadership,
                                                               16
                                                                    either of these criteria, lose its ability to claim a
17
     are acknowledging the perception problem with multiple
                                                               17
                                                                    spill due to flooding was unavoidable? Thank you.
18
     conflictive roles of the Wallace Group that South San
                                                               18
                                                                         MR. YOUNG: All right. Thank you for your
19
     Luis Obispo County Sanitation District board of
                                                               19
                                                                    comments, Mr. Snook.
20
                                                               20
     directors has established that leadership is
                                                                             Barbara Mann? And then Linda Austin, are
21
     untouchable.
                                                               21
                                                                    you here?
22
                                                               22
              I believe the amount of time afforded the
                                                                        MS. AUSTIN: Yes.
23
                                                              23
                                                                         MR. YOUNG: Okay. Then Marilee Highman
     public, the many reports of Oceano homes being flooded
24
     by sewage, the critical reports of inadequate
                                                               24
                                                                    (phonetic)? Okay. Those are our last speakers.
     leadership and potential mismanagement at the District,
                                                               25
                                                                         MS. MANN: My name is Barbara Mann. I live at
                                                    Page 419
                                                                                                                  Page 421
```

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

```
1630 Front Street in Oceano. I was a member of the
                                                                     all these years and, you know, the first incident was
2
     Oceano Community Service District for 11 years. I have
                                                                 2
                                                                     because of this big flood. I was present during the
3
     been gone now for two years, so I do know a little bit
                                                                 3
                                                                     flood. I had my business property. Some of our --
4
     about a few things.
                                                                 4
                                                                     some rental properties we manage were affected by the
5
              I just want to point out a couple of
                                                                 5
                                                                     flood. My friends and neighbors had their homes
6
     items to you folks, that I hope you will take into
                                                                 6
                                                                     affected by the flood. I was in the floodwaters. They
7
                                                                 7
     consideration when you're looking at the amount of the
                                                                     were in the floodwaters. We were all out there. No
8
                                                                 8
     fine. I would hope that you would reduce it.
                                                                     one got sick. I was never aware of anyone becoming
9
              Number one: The Sand District, as we
                                                                 9
                                                                10
10
     lovingly call it, is owned by Oceano, Grover Beach and
                                                                              And in all my 60 years there, I have
11
     Arroyo Grande.
                                                                11
                                                                     never seen a flood like that happen. So I -- that is
12
              Now, it's not owned by John Wallace.
                                                                12
                                                                     kind of what I want you to take into consideration, is
13
     It's not owned by the Wallace Group. It's owned by the
                                                                13
                                                                     the amount of water that came into the neighborhood
14
     people that live in these three communities. It's
                                                                14
                                                                     that day. And we have heard some of the reasons here
                                                                15
15
     ours. We -- you know, the statement was made here
                                                                     why that happened.
16
     today that they are going to make an example of the
                                                                16
                                                                              And I just don't think it's right to take
17
     Sand District. Well, that is real great, if the Sand
                                                                17
                                                                     this and put all the blame on this one entity, the
18
                                                                     Sanitation District, because what it's doing is what
     District was one person. It isn't.
                                                                18
19
              The person you're going to be hurting,
                                                                19
                                                                     we've heard is it's affecting all of us, the residents
20
                                                                20
     are the little people who will be paying further rate
                                                                     who live in Oceano and Arroyo Grande and Grover Beach.
     increase, because I'm sure the way you know -- you have
                                                                21
                                                                              And there was a lot of contributing
22
     looked at their budget and things like that, they have
                                                                22
                                                                     factors that -- you know, to the flood. And we heard
23
     major projects every year. Those are put on there and
                                                                23
                                                                     here today one of the things is that the Sanitation
24
     are the big things they hope to do this year.
                                                                24
                                                                     District has five million in reserves, so there is an
25
                                                                25
              But they also have 10- to
                                                                     ability to pay. That's fine, but those reserves are --
                                                     Page 422
                                                                                                                     Page 424
     15-year-long-range plans, so you're trying to punish us
                                                                 1
                                                                      like I said, it's our money to keep the plant going for
2
     now for saving our money to be able to take care of all
                                                                 2
                                                                     upgrades and repairs and long-range plans, and we want
3
     these projects that we want to do.
                                                                 3
                                                                     to keep that money to keep the plant going because it's
4
                                                                 4
              So say, you fine us the big amount of
                                                                     in our best interest. We live there, and so we want a
5
                                                                 5
     money and we have to pay it, then what happens next
                                                                     plant that runs effectively and smoothly and is in good
6
     year when some major budget items don't get done? We
                                                                 6
                                                                     working shape.
7
                                                                 7
     will be right back here again. And it is not right.
                                                                              So I'm just -- I would like to ask that
8
              I really hope that you sit and think what
                                                                 8
                                                                     you would really take into consideration all these
9
                                                                 9
     you're doing. But to decide, oh, I am going to come
                                                                     things in this fine that I feel is extremely excessive.
                                                                10
10
     down really hard. You know, we're going to set an
                                                                              Thank you very much.
11
     example. Be a hero for the State of California. That
                                                                11
                                                                          MR. YOUNG: Thank you for your comments,
12
     is not right. You know it isn't right. And I just
                                                                12
                                                                     Ms. Austin.
                                                                13
13
     really hope that you stop and think about what you're
                                                                               Marilee Hyman (phonetic)?
14
                                                                14
                                                                          MS. HYMAN: I'm Marilee Hyman, Shoreline Drive,
     doing.
15
              I appreciate your time and I wish you the
                                                                15
                                                                     Pismo Beach.
16
     best.
                                                                16
                                                                              Mr. Chairman and members of the board,
17
                                                                17
          MR. YOUNG: Thank you for your comments,
                                                                     you find a nicety (phonetic) for wastewater spills at
18
     Ms. Mann.
                                                                18
                                                                     the same time we were actually correcting the problem
19
              Linda Austin?
                                                                19
                                                                     and struggling with the 18 million dollars cost to
20
                                                                20
          MS. AUSTIN: My name is Linda Austin, and I
                                                                     upgrade. So I'm sympathetic to how much your fines can
21
     live at 636 Air Park in Oceano. I'm a lifelong Oceano
                                                                21
                                                                     hurt a community.
22
                                                                22
     resident. I have been a neighbor of the sewer plant
                                                                              An open statement here said you have the
23
     since it was built. And I'm just here to speak about
                                                                23
                                                                     power to do one of three things: Accept, reject or
24
     the sewer plant as our neighbor.
                                                                24
                                                                     modify the penalty.
25
              It has always been a good neighbor for
                                                                25
                                                                              For accept, there has been enough doubt
```

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

```
cast on the accuracy of some of the calculations to not
                                                                 1
                                                                              That concludes our testimony of
2
                                                                 2
                                                                      interested persons. So we will now resume back to, I
     just accept the penalty as proposed. For example, are
3
                                                                 3
                                                                      think -- was Mr. Buffleben finished with his testimony?
     you really convinced that an analysis done with a
                                                                 4
                                                                          MS. MACEDO: He, I believe, was ready for
     two-year-old information is adequate? And the
 5
                                                                 5
                                                                      cross.
     presenter projected to a certainty, he didn't approve
 6
                                                                 6
     it. I can project some figures, too. He started with
                                                                          MR. YOUNG: For cross. Okay.
                                                                 7
7
     2009 with 6 million; 2010, 5 million. Keep going to
                                                                 8
     2011 for -- you know, in a couple of years, you're
                                                                                  CROSS-EXAMINATION
9
     going to take the lion's share of that cash that they
                                                                 9
                                                                      BY MS. THORME:
                                                                 10
10
     have. And two years can take you from a surplus to a
                                                                         Q Good evening, Dr. Buffleben. I'm sorry
11
                                                                 11
     deficit in today's economy.
                                                                      for the break in between your testimony.
                                                                 12
12
               Second, reject. It's hard to reject the
                                                                             So you had testified that you thought
                                                                 13
13
                                                                      that the Office of Enforcement prosecution team's
     staff's recommendation outright. Especially with the
14
                                                                 14
                                                                      volume estimate was a reasonable estimate; is that
     State's high priority of wanting to make a punitive
                                                                 15
                                                                      correct.
15
     point. The State wants the District to upgrade
                                                                 16
                                                                              That's correct.
16
                                                                          Α
     projects soon. I don't really see the direct nexus
     with the improvements that prevented the December
                                                                 17
                                                                          Q And no matter how you cut it, it's still
18
                                                                 18
                                                                     just an estimate; isn't that correct?
     event. And you don't really need to make a sacrificial
19
     lamb to make a point here. It's well known that you're
                                                                 19
                                                                              That's correct.
                                                                 20
20
                                                                          Q Okay. And I'm not an engineer, but why
     a tough bunch, and that you keep water clean. It's
                                                                 21
21
                                                                      would you compare a dry weather -- normal dry-weather
     important.
                                                                 22
22
                                                                      day, instead of using a normal wet-weather day?
               Third, modify. But you can modify the
23
                                                                 23
     penalty through a consideration of justice and other
                                                                          A Well, we split it up, because dry-weather
24
                                                                 24
                                                                      variations in the hydrograph going through the base
     factors. Take the cash. That cash came out of the
25
                                                                      flow of the sewer system, is very regular. So that is
     pockets of the poor. A large fine hurts a poor
                                                                                                                      Page 428
                                                     Page 426
     community. It takes away the very resources they need
                                                                      our starting point.
2
                                                                  2
     to address that punitive point that the State wants to
                                                                              When you look at the I and I for wet
3
                                                                 3
                                                                      weather, you can do hydrographs, and you can generally,
4
                                                                  4
                                                                      in most cases, get a good estimate of the extra water
              I'd like to tell you a short story about
                                                                  5
5
     a judge in New York City traffic court. We were
                                                                      coming into the system to get a better estimate of the
     heading to the emergency room. My husband was rushing
                                                                  6
                                                                      flow.
7
                                                                  7
     me, at eight-and-a-half months pregnant, to the
                                                                          Q Okay. But are rain flows ever constant,
8
                                                                  8
                                                                      as you assumed?
     hospital.
9
                                                                 9
              He rushed out of the car at the emergency
                                                                          A Are rain flows ever constant?
10
                                                                 10
     room entrance to assist me inside. Short story: Our
                                                                          O For hours and hours on end?
11
     car was impounded and towed. We were fined. And there
                                                                 11
                                                                              It was not in a shape of a hydrograph,
12
                                                                 12
     we are in that court. And we watched that judge --
                                                                      and this was not a storm event -- a normal storm event
                                                                 13
13
     guilty he gaveled. Guilty, one after another. Guilty.
                                                                      either, so no, hydrograph is not constant forever.
14
     And so when my turn came, he looked at me and said,
                                                                 14
                                                                          Q Okay. So I think you testified that
15
                                                                 15
     Well, obviously your facts are true. At that point, I
                                                                      multiple spill method estimate methods can be used; is
16
     was way overdue.
                                                                 16
                                                                      that correct?
                                                                 17
17
                                                                              That's correct.
              He slammed the gavel down and said
                                                                          Α
18
     guilty. And then he said, "fine waived." That was a
                                                                 18
                                                                          Q And didn't the District provide the Water
19
     lesson for me. Hard-line facts may say guilty. But
                                                                 19
                                                                      Board initially right away, in their five-day report,
20
                                                                 20
     what you can do about it, is a different story.
                                                                      with three different estimates?
21
     You can decide the consequences. You decide the
                                                                 21
                                                                             I would have to see the report. But the
22
                                                                 22
     justice.
                                                                      District did come up with three different estimates,
23
                                                                 23
              Thank you for your time.
                                                                 24
24
                                                                          Q Okay. And does the State Water Board,
          MR. YOUNG: Thank you for your comments,
```

25

Page 427

when you provide sanitary sewer overflow training, do

Ms. Hyman.

25

1	you teach people how to estimate during flood	1	on-site?
2	conditions?	2	A I'm not familiar with that.
3	A During flood conditions? Well, I	3	Q Okay. Is there a difference between
4	first of all, I characterize the Water Board had a	4	rainwater falling on the site, and floodwater coming in
5	training session about how to do the different methods.	5	from outside?
6	So they didn't necessarily say, This is a method to	6	A I don't know.
7	which you apply in each situation. So that was really	7	MS. THORME: Okay. So Exhibit 29, please. Can
8	one of the points of the training method, is you really	8	we have the do we have the screen on?
9	need to take the circumstances of the individual case	9	MS. MACEDO: It's C
10	to determine which is the better and best method.	10	MS. THORME: Yeah.
11	Q Okay. But does the State mandate that a	11	MS. MACEDO: right?
12	certain method be used by dischargers to estimate	12	BY MS. THORME:
13	spills?	13	Q Okay. So this there was an e-mail in
14	A No, it does not.	14	here about the photo? Okay, at the bottom at the
15	Q Okay. And do dischargers have to certify	15	bottom there is an e-mail. Are you aware of this
16	under penalty of perjury, that their spill estimates	16	e-mail?
17	are accurate?	17	A Yes, I am.
18	A Yes, they do.	18	Q Okay. Does the e-mail say that the
19	Q And are they subject to criminal and	19	"per the attached pictures, sewer flowed back up into
20	civil penalties for falsification of estimates?	20	his bathtub, but did not spill out"?
21	A Yes, I believe so.	21	A I'm not reading the e-mail word-for-word,
22	Q So what would be the incentive to not	22	but
23	accurately report?	23	MS. THORME: Can you highlight that, what I
24	A I'm not going to speculate on the	24	just read, please, for the "per the attached picture?"
25	incentives. I mean, there is clearly some incentives	25	Q Okay. Do you see that now, "per the"?
	Page 430		Page 432
1	to low ball your estimate so that you can get a lower	1	A Yes.
2	fine.	2	Q Okay. Do you have any evidence that it
3	Q Okay. So you said that normally	3	did spill out of the bathtub?
4	wastewater treatment plants are required to treat storm	4	A No.
5	water; is that correct?	5	Q Okay. And then it says that, "apparently
6	A Say that again?	6	a small amount overflowed out of his toilet as well.
7	Q That wastewater treatment plants are	7	He was able to clean the spill out, as it was just a
8	normally required to treat storm water?	8	few gallons."
9	A It depends on what is in the permit.	9	Do you have any evidence that there was
10	Q Okay. And in the District's permit,	10	more that came out of the toilet or that it mixed with
11	doesn't it reference the industrial storm water permit?	11	storm water coming in from outside?
12	A I'm not as familiar with the District's	12	A It mixed with the floodwaters that were
13	PDS permit.	13	inside his bathroom.
14	Q Okay. Did you make any allegations in	14	Q What evidence do you have of that?
15	the administrative civil liability claim complaint that	15	A The photo evidence and his testimony.
16	the District failed to comply with the industrial storm	16	Q Okay. His testimony is hearsay, so what
17	water permit?	17	evidence do you have?
18	A We did say that the permit the PDS	18	A There is the photo evidence.
19	permit requires them to treat storm water and that was	19	Q So the photo evidence was attached to
20	a prohibition that they violated in this event.	20	this e-mail?
21	Q But did you claim that they violated the	21	A That's correct.
22	industrial storm water permit?	22	MS. THORME: Okay. Can you bring up Exhibit
23	A I do not know.	23	24, please?
24	Q And isn't that requirement for industrial	24	Q So this document was a CIWQS report that
25	storm water treatment, that it's rain water falling	25	you testified that you created?
-	-		
	Page 431		Page 433

1	A T did ask susske this uses the	1	O And the order of the order to be a self-
1	A I did not create this report.	1	Q And then does it say "private lateral"?
2	Q Okay. Who created it?	2	A Let me see where you're looking at
3	A Jim Fischer did.	3	yes.
4	Q Okay. Did he authenticate it?	4	Q Okay. So were any of those four spills
5	A Yes.	5	that were in Exhibit 24, that were claimed to be the
6 7	Q Okay. And on here, there are several	6	District spills, District spills?
7 8	claims of sanitary sewer spills, and we had submitted	7 8	A It does not look so.
9	with our evidence Exhibit 93, about the incorrect	9	Q Okay. Thank you.
10	allegations that these were District spills. Did you review that evidence?	10	And did the District extensively
11	A Exhibit 93, I don't remember the	11	investigate possible spill locations? A Extensively? I don't think I would
12	particulars of it.	12	A Extensively? I don't think I would characterize it in that method.
13	MS. THORME: Okay. Could you bring up 93,	13	Q Okay. Did they provide ample
14	please?	14	photographic evidence of their efforts?
15	•	15	
16	Q Were you aware that none of those four spills that were in Exhibit 24, were District spills?	16	A They did provide photographs. I wouldn't necessarily characterize that as ample.
17	A If that is what you're contending.	17	
18	,	18	Q Do you have any evidence that additional spills occurred that were not reported?
19	Q Okay. Well, we will walk through them. MS. THORME: So this was if you can, down at	19	A We have testimony today, yes.
20	the bottom so is no, can you blow up just like	20	
21	the middle. Maybe it's the second page. Sorry. The	21	Q By whom? A Mr. Appleton.
22	second page.	22	
23	Q Okay. So who does it say the discharger	23	Q Where did that happen?A That happened at the plant. I'm speaking
24	is at the top?	24	of the day of the event.
25	A It says, "Oceano Community Service	25	Q Okay. And what evidence do you have that
20			
	Page 434		Page 436
1	District. "	1	that left the wastewater treatment plant site?
1 2	District. "	1 2	<u> </u>
	District. "		that left the wastewater treatment plant site?
2	District. " Q And is that a separate entity from the	2	that left the wastewater treatment plant site? A That left the wastewater treatment? Well,
2	District. " Q And is that a separate entity from the Sanitation District?	2 3	that left the wastewater treatment plant site? A That left the wastewater treatment? Well, it exited the headworks, so it was discharging onto the
2 3 4	District. " Q And is that a separate entity from the Sanitation District? A Correct. That is a satellite system.	2 3 4	that left the wastewater treatment plant site? A That left the wastewater treatment? Well, it exited the headworks, so it was discharging onto the site.
2 3 4 5	District. " Q And is that a separate entity from the Sanitation District? A Correct. That is a satellite system. Q Okay. So that would not be a District	2 3 4 5	that left the wastewater treatment plant site? A That left the wastewater treatment? Well, it exited the headworks, so it was discharging onto the site. Q That wasn't my question. My question
2 3 4 5 6	District. " Q And is that a separate entity from the Sanitation District? A Correct. That is a satellite system. Q Okay. So that would not be a District spill; is that correct?	2 3 4 5 6	that left the wastewater treatment plant site? A That left the wastewater treatment? Well, it exited the headworks, so it was discharging onto the site. Q That wasn't my question. My question was, what evidence do you have that it left the
2 3 4 5 6 7	District. " Q And is that a separate entity from the Sanitation District? A Correct. That is a satellite system. Q Okay. So that would not be a District spill; is that correct? A That's correct.	2 3 4 5 6 7	that left the wastewater treatment plant site? A That left the wastewater treatment? Well, it exited the headworks, so it was discharging onto the site. Q That wasn't my question. My question was, what evidence do you have that it left the treatment plant site?
2 3 4 5 6 7 8	District. " Q And is that a separate entity from the Sanitation District? A Correct. That is a satellite system. Q Okay. So that would not be a District spill; is that correct? A That's correct. Q So there, who is that discharger?	2 3 4 5 6 7 8	that left the wastewater treatment plant site? A That left the wastewater treatment? Well, it exited the headworks, so it was discharging onto the site. Q That wasn't my question. My question was, what evidence do you have that it left the treatment plant site? A There was substantial discharge, likely
2 3 4 5 6 7 8 9	District. " Q And is that a separate entity from the Sanitation District? A Correct. That is a satellite system. Q Okay. So that would not be a District spill; is that correct? A That's correct. Q So there, who is that discharger? A That says City of Arroyo Grande.	2 3 4 5 6 7 8	that left the wastewater treatment plant site? A That left the wastewater treatment? Well, it exited the headworks, so it was discharging onto the site. Q That wasn't my question. My question was, what evidence do you have that it left the treatment plant site? A There was substantial discharge, likely out of that point. And the District concluded that
2 3 4 5 6 7 8 9	District. " Q And is that a separate entity from the Sanitation District? A Correct. That is a satellite system. Q Okay. So that would not be a District spill; is that correct? A That's correct. Q So there, who is that discharger? A That says City of Arroyo Grande. Q So that is not the Sanitation District;	2 3 4 5 6 7 8 9	that left the wastewater treatment plant site? A That left the wastewater treatment? Well, it exited the headworks, so it was discharging onto the site. Q That wasn't my question. My question was, what evidence do you have that it left the treatment plant site? A There was substantial discharge, likely out of that point. And the District concluded that most of the floodwaters that were coming out of the
2 3 4 5 6 7 8 9 10	District. " Q And is that a separate entity from the Sanitation District? A Correct. That is a satellite system. Q Okay. So that would not be a District spill; is that correct? A That's correct. Q So there, who is that discharger? A That says City of Arroyo Grande. Q So that is not the Sanitation District; is that correct?	2 3 4 5 6 7 8 9 10	that left the wastewater treatment plant site? A That left the wastewater treatment? Well, it exited the headworks, so it was discharging onto the site. Q That wasn't my question. My question was, what evidence do you have that it left the treatment plant site? A There was substantial discharge, likely out of that point. And the District concluded that most of the floodwaters that were coming out of the manholes, exited the plant with the floodwaters, and
2 3 4 5 6 7 8 9 10 11	District. " Q And is that a separate entity from the Sanitation District? A Correct. That is a satellite system. Q Okay. So that would not be a District spill; is that correct? A That's correct. Q So there, who is that discharger? A That says City of Arroyo Grande. Q So that is not the Sanitation District; is that correct? A That's correct.	2 3 4 5 6 7 8 9 10 11	that left the wastewater treatment plant site? A That left the wastewater treatment? Well, it exited the headworks, so it was discharging onto the site. Q That wasn't my question. My question was, what evidence do you have that it left the treatment plant site? A There was substantial discharge, likely out of that point. And the District concluded that most of the floodwaters that were coming out of the manholes, exited the plant with the floodwaters, and therefore, it seems logical to conclude that that was a
2 3 4 5 6 7 8 9 10 11 12	District. " Q And is that a separate entity from the Sanitation District? A Correct. That is a satellite system. Q Okay. So that would not be a District spill; is that correct? A That's correct. Q So there, who is that discharger? A That says City of Arroyo Grande. Q So that is not the Sanitation District; is that correct? A That's correct. MS. THORME Okay. The next one, please.	2 3 4 5 6 7 8 9 10 11 12 13	that left the wastewater treatment plant site? A That left the wastewater treatment? Well, it exited the headworks, so it was discharging onto the site. Q That wasn't my question. My question was, what evidence do you have that it left the treatment plant site? A There was substantial discharge, likely out of that point. And the District concluded that most of the floodwaters that were coming out of the manholes, exited the plant with the floodwaters, and therefore, it seems logical to conclude that that was a similar discharge point mixed with the rest of the
2 3 4 5 6 7 8 9 10 11 12 13	District. " Q And is that a separate entity from the Sanitation District? A Correct. That is a satellite system. Q Okay. So that would not be a District spill; is that correct? A That's correct. Q So there, who is that discharger? A That says City of Arroyo Grande. Q So that is not the Sanitation District; is that correct? A That's correct. MS. THORME Okay. The next one, please. Q Who is the discharger on this one?	2 3 4 5 6 7 8 9 10 11 12 13 14	that left the wastewater treatment plant site? A That left the wastewater treatment? Well, it exited the headworks, so it was discharging onto the site. Q That wasn't my question. My question was, what evidence do you have that it left the treatment plant site? A There was substantial discharge, likely out of that point. And the District concluded that most of the floodwaters that were coming out of the manholes, exited the plant with the floodwaters, and therefore, it seems logical to conclude that that was a similar discharge point mixed with the rest of the sewage and storm water was being discharged out of the
2 3 4 5 6 7 8 9 10 11 12 13 14 15	District. " Q And is that a separate entity from the Sanitation District? A Correct. That is a satellite system. Q Okay. So that would not be a District spill; is that correct? A That's correct. Q So there, who is that discharger? A That says City of Arroyo Grande. Q So that is not the Sanitation District; is that correct? A That's correct. MS. THORME Okay. The next one, please. Q Who is the discharger on this one? A The City of Arroyo Grande.	2 3 4 5 6 7 8 9 10 11 12 13 14 15	that left the wastewater treatment plant site? A That left the wastewater treatment? Well, it exited the headworks, so it was discharging onto the site. Q That wasn't my question. My question was, what evidence do you have that it left the treatment plant site? A There was substantial discharge, likely out of that point. And the District concluded that most of the floodwaters that were coming out of the manholes, exited the plant with the floodwaters, and therefore, it seems logical to conclude that that was a similar discharge point mixed with the rest of the sewage and storm water was being discharged out of the plant site.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	District. " Q And is that a separate entity from the Sanitation District? A Correct. That is a satellite system. Q Okay. So that would not be a District spill; is that correct? A That's correct. Q So there, who is that discharger? A That says City of Arroyo Grande. Q So that is not the Sanitation District; is that correct? A That's correct. MS. THORME Okay. The next one, please. Q Who is the discharger on this one? A The City of Arroyo Grande. Q And that is not the Sanitation District;	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	that left the wastewater treatment plant site? A That left the wastewater treatment? Well, it exited the headworks, so it was discharging onto the site. Q That wasn't my question. My question was, what evidence do you have that it left the treatment plant site? A There was substantial discharge, likely out of that point. And the District concluded that most of the floodwaters that were coming out of the manholes, exited the plant with the floodwaters, and therefore, it seems logical to conclude that that was a similar discharge point mixed with the rest of the sewage and storm water was being discharged out of the plant site. Q Okay. That was not my question. My question was, what evidence do you have? Not what would be the likely conclusion or a reasonable
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	District. " Q And is that a separate entity from the Sanitation District? A Correct. That is a satellite system. Q Okay. So that would not be a District spill; is that correct? A That's correct. Q So there, who is that discharger? A That says City of Arroyo Grande. Q So that is not the Sanitation District; is that correct? A That's correct. MS. THORME Okay. The next one, please. Q Who is the discharger on this one? A The City of Arroyo Grande. Q And that is not the Sanitation District; is that correct?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	that left the wastewater treatment plant site? A That left the wastewater treatment? TRANSCRIPT OF HEARING

1	BY MS. T	HORME:	1	Q And you signed off as a reviewer, not a
2	Q	And did he testify that it left the	2	preparer; is that correct?
3	treatme	nt plant site?	3	A That is incorrect.
4	Α	He testified that it left the headworks.	4	MS. THORME: Can we bring up Exhibit 1, please?
5	Q	And you testified that there is no flow	5	The first page.
6	meter o	n manholes; is that correct?	6	Q So I see in the middle it says, "prepared
7	Α	That wasn't what I testified. I said	7	by Leo Sarmiento, PE," who is a chemical engineer, "and
8	that the I	District wasn't measuring flow out of	8	Jim Fischer," who is a mechanical engineer. And then
9	individua	I manholes during the event.	9	it says, "reviewed by Dr. Matthew Buffleben, PE, civil
10	Q	Are there flow meters on manholes?	10	engineer" so
11	Α	There could be.	11	A That's right.
12	Q	Normally, are there flow meters on	12	Q It says you reviewed it, not prepared it?
13	manhole	es?	13	A Well, originally Jim Fischer started the
14	Α	No.	14	first couple of drafts, and I made substantial
15	Q	Okay. And would the flow meter, in this	15	alterations to it, so that is slightly inaccurate. It
16	case, ha	ve to go in and out in order to get a	16	was also prepared and reviewed by me.
17	complet	ely accurate estimate, as you would desire, for	17	Q And also there were several other
18	both wa	ter coming to the treatment plant and going out	18	instances of inaccuracies that were found in this
19	of those	manholes?	19	technical report; is that correct?
20	Α	I'm not sure I understand the question.	20	A There were some misstatements, yes.
21	Q	Okay. So you want to know how much water	21	MS. THORME: Okay. I have no further
22	came ou	t of the manholes. You would need a flow meter	22	questions.
23	that we	nt out, correct?	23	MR. YOUNG: Redirect?
24	Α	Sure.	24	MS. MACEDO: No. Thank you.
25	Q	And then if you're saying that the	25	MR. YOUNG: Okay. Any board questions?
		Page 438		Page 440
1	floodwa	aters also came in, you would need a flow meter	1	Mr. Johnston?
2		ent into the manholes, correct?	2	MR. JOHNSTON: I have no questions.
3	Α	If you want the most accurate estimate,	3	MR. YOUNG: Mr. Jordan?
4	yes.	,	4	MR. JORDAN: Thank you, Mr. Chair.
5	Q	Okay. So you said that you had a	5	I'm not even going to try your last name.
6	-	vative start and stop time to account for	6	THE WITNESS: It's okay.
7		inty in I and I; is that correct?	7	MR. JORDAN: How many of these have you done,
8	Α	That is part of the reason, yes.	8	generally, this kind of process where you go through
9	Q	Okay. So you essentially started the	9	and estimate a spill?
10	spill at	a different time than the District said the	10	THE WITNESS: Well, this is my first
11	spills o	ccurred?	11	enforcement case as part of a supervisory position, so
12	A	That's correct.	12	normally I haven't estimated a spill site before.
13	Q	So how reasonable is that for you to just	13	MR. JORDAN: You have not?
14	chop ar	hour off to account for uncertainty?	14	THE WITNESS: No, I have not.
15	Α	How reasonable?	15	MR. JORDAN: Okay. So the particular question
16	Q	Yes.	16	over that was raised up before from the last witness
17	Α	I stated it is reasonable.	17	on the drop-off in the rates, your use of the straight
18	Q	And is there any engineering guidelines	18	line and the other witness's contention with that
19	that yo	u used when you made that decision?	19	drop-off, can you tell me some more about that protocol
20	Ā	I just used my best professional	20	and rather than the assumptions, is that used widely by
21	judgmen	ıt.	21	the Department the Department of Enforcement group,
22	ı Q		22	or does it verify it or is it crediblized by other
23	engine	er that signed off to the technical report and	23	studies that you have done or other enforcement cases?
24		1; is that correct?	24	THE WITNESS: Well, I have done I have
25	Α	That's correct.	25	extensive knowledge of hydrology, and so I do take that
		Page 439		Page 441

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

```
experience into what we calculated for the sewer
                                                                1
                                                                          MR. YOUNG: Dr. Wolf?
2
     overflow. And what we really are talking about is
                                                                2
                                                                          DR. WOLF: Yes.
3
                                                                3
     hydrology when we're talking about the inflow into the
                                                                              Dr. Buffleben, I have a couple of
     sewer system. And so I draw on that experience and my
                                                                4
                                                                     questions.
5
     other work, to estimate what is reasonable in this
                                                                5
                                                                              The first one, when the sewer pipeline is
6
                                                                6
     case.
                                                                     near capacity, let's say full, and you do have surface
7
                                                                7
                                                                     flooded water pulling, do you have the venturi
              And so in this case, I would still expect
                                                                8
     a hydrograph of going up and down. But for the reasons
                                                                     (phonetic) effect of basically drawing some of that
9
     I stated during my presentation, is that, A, at the
                                                                9
                                                                     surface water into the manhole?
                                                                10
10
     start point, I feel very strongly that was not the
                                                                          THE WITNESS: It is possible, but I have not
11
     peak. So we underestimated there.
                                                                11
                                                                     really thought about that though.
12
              And the second point was that the area
                                                                12
                                                                          DR. WOLF: Okay. Earlier on in your
13
     was flooded. Now, the model that he was talking about
                                                                13
                                                                     presentation, you showed the slide of a four-inch
14
     before, it a very good technical model. But I don't
                                                                14
                                                                     pipeline, this was the KSBY slide --
                                                                15
15
     believe it applies in this event. And I can get more
                                                                          THE WITNESS: Yeah.
16
     technical in my review, if you want to.
                                                                16
                                                                          DR. WOLF: -- and it was showing discharge that
17
              I mean, this basic model is a percentage
                                                                17
                                                                     was on the right side of the slide?
     of the rainfall. It's called the R factor. And so
                                                                          THE WITNESS: That's correct.
18
                                                                18
19
     basically this R factor for this event, was about 3.3
                                                                19
                                                                          DR. WOLF: And you did not give a quantitative
20
     percent and that is how much percent of rain got into
                                                                20
                                                                     value, in terms of what the contribution was. You made
21
     the system.
                                                                21
                                                                     the argument that this discharge through a vent, had
22
                                                                22
                                                                     not been accounted for by the District.
              Well, during a flood event, like I
23
                                                                23
     alluded -- or stated in my presentation, there is a lot
                                                                              Do you have any estimation of gallons per
24
     more pathways for water to get into the system. And I
                                                                24
                                                                     minute and duration of that event?
                                                                25
25
     know the District is claiming that the pressure in the
                                                                          THE WITNESS: I did not do the calculations for
                                                    Page 442
                                                                                                                    Page 444
                                                                     that particular manhole. So if you're using the table
     pipe system was always greater than the floodwaters.
                                                                1
2
     But I think there is evidence in the case that shows
                                                                2
                                                                     like the District did, it's assuming that the pit hole
3
     that that claim has some doubt.
                                                                3
                                                                     size is seven-eighths diameter and a four-inch diameter
4
                                                                4
                                                                     pipe is much larger than that. So I'm very confident
               And so I do believe that there was time
5
     that floodwaters entered into the system, and that the
                                                                5
                                                                     to say that it's much larger than they estimated. And
6
     floodwaters weren't always held back by the pressure
                                                                6
                                                                     they also included that pit hole value into their
7
                                                                7
     within the sewer system.
                                                                     calculations.
8
                                                                8
                                                                              But I would have to sit down and find the
          MR. JORDAN: Okay. And I just want to give you
9
                                                                9
                                                                     proper equations to do that calculation for you, and I
     one more chance to confidently state that, although you
10
     drew an average line across there at the four million
                                                                10
                                                                     have not done that.
11
     gallons per day level until the system caught back up,
                                                                11
                                                                          DR. WOLF: Okay. And then my last question is
12
     you still feel that that is a very credible
                                                                12
                                                                     you also mentioned the pump station opening where you
13
     under-estimation of what was actually going on during
                                                                13
                                                                     had -- there was testimony of -- from Mr. Appleton of
14
     that period of time, right?
                                                                14
                                                                     the spillover, and I think there was a numeric value of
15
                                                                     about six inches of water that was spilling out?
          THE WITNESS: Yes. In particular because the
                                                                15
16
     spill event was on Monday, too. So there might have
                                                                16
                                                                          THE WITNESS: Yes.
     been some storage that was passed through the system
17
                                                                17
                                                                          DR. WOLF: Again, any -- and this was just
18
     late Sunday evening. But the spill event on Monday,
                                                                18
                                                                     brought up, you know, just a little while ago with some
19
     really confirms in my mind that the system was at full
                                                                19
                                                                     other questions -- any estimation of what that
20
                                                                20
     capacity probably right around 10:00 or so. And then
                                                                     contribution would be?
```

24

25

Page 443

112 (Pages 442 to 445)

THE WITNESS: Well, he didn't give a duration

of how long, so that would be the first question. And

I would also need to know the width of the door. And

And so there are equations to develop,

so that is the weir calculation, like you said.

23

24

25

down.

the next day, that is when the storage -- after they

turned on the additional pump at 10:00 a.m. Monday

morning, that is when the storage system was brought

MR. JORDAN: Okay. Thank you, very much.

TRANSCRIPT OF HEARING

1	and if I had more accurate width dimensions and how	1	Obispo District.
2	long it was going, I could very easily, with the right	2	MR. HARRIS: Okay. Thank you.
3	equation, figure out an amount.	3	MR. YOUNG: Okay. So no questions,
4	Now, if you're trying to get a ballpark,	4	Mr. Jeffries?
5	you know, that flow would be greater than the manhole.	5	MR. JEFFRIES: No.
6	They removed one of the covers on one of the manholes,	6	MR. YOUNG: None for myself. Thank you very
7	and they used the table value estimate that was 800 GPM	7	much.
8	of one inch coming out of that manhole, a	8	THE WITNESS: Thank you.
9	24-inch-diameter manhole. I can confidently say that	9	MS. MACEDO: With that, the prosecution team
10	that door would have been that level GPM six inches,	10	rests, and we reserve the rest of it for cross.
11	would have been higher than that.	11	MR. YOUNG: Okay. How much time does the
12	DR. WOLF: So that is about 400,800 GPM?	12	prosecution team have?
13	THE WITNESS: No	13	MR. LODGE: Twelve minutes.
14	DR. WOLF: I'm using my calculator. I'm	14	MR. YOUNG: Twelve minutes. Okay. So now how
15	cheating.	15	much
16	THE WITNESS: No, I would not do the	16	MS. THORME: Can we know how much time we have?
17	calculation that way. But it is essentially a weir,	17	MR. YOUNG: How much time does the District
18	you can come up with an answer. I have not since he	18	have, an hour?
19	was testifying that today, I have not had time to do	19	MS. THORME: The same?
20	that.	20	MR. LODGE: 46 minutes.
21	DR. WOLF: Okay. But you would characterize it	21	MR. YOUNG: 46 minutes.
22	as being significant?	22	Okay. So how many witnesses do you have?
23	THE WITNESS: Very significant, yes.	23	MS. THORME: We have two.
24	DR. WOLF: Thank you very much.	24	MR. YOUNG: Two.
25	THE WITNESS: Okay.	25	MS. THORME: So it would be Mary Vorissis, who
	Page 446		Page 448
	1 age 440		1 age 448
1	MR. YOUNG: Mr. Harris?	1	is our next witness.
	MR. YOUNG: Mr. Harris? MR. HARRIS: It's aetting late, so I'm getting		
2	MR. HARRIS: It's getting late, so I'm getting	1 2 3	is our next witness. MR. YOUNG: Okay.
	MR. HARRIS: It's getting late, so I'm getting a little punchy so if I sound a little incoherent, I	2	MR. YOUNG: Okay.
2 3 4	MR. HARRIS: It's getting late, so I'm getting a little punchy so if I sound a little incoherent, I apologize.	2 3	MR. YOUNG: Okay. DIRECT EXAMINATION
2 3	MR. HARRIS: It's getting late, so I'm getting a little punchy so if I sound a little incoherent, I apologize. The plant and the trump lines, are they	2 3 4	MR. YOUNG: Okay. DIRECT EXAMINATION THE WITNESS: I'm Mary Vorissis, and I'm from
2 3 4 5	MR. HARRIS: It's getting late, so I'm getting a little punchy so if I sound a little incoherent, I apologize.	2 3 4 5	MR. YOUNG: Okay. DIRECT EXAMINATION THE WITNESS: I'm Mary Vorissis, and I'm from Thousand Oaks, California. I'm representing CH2M Hill,
2 3 4 5 6	MR. HARRIS: It's getting late, so I'm getting a little punchy so if I sound a little incoherent, I apologize. The plant and the trump lines, are they all covered by the PDS permit? THE WITNESS: Yes.	2 3 4 5 6	MR. YOUNG: Okay. DIRECT EXAMINATION THE WITNESS: I'm Mary Vorissis, and I'm from Thousand Oaks, California. HARRIS: What does that cover? Does that cover just the trump lines? THE WITNESS: I'm not the expert on the permits, but the SSOWER, so I don't know. Jim Fischer would be able to answer that question in details. MR. HARRIS: Okay. So I think there has been a discussion trying to draw a line between what the District was responsible for and what other collections systems might be responsible for, and I'm a little unclear. So if the backup occurs all the way into other districts' collection systems and comes out the manhole covers, who is responsible for that spill? THE WITNESS: That entity that caused that	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	DIRECT EXAMINATION THE WITNESS: I'm Mary Vorissis, and I'm from Thousand Oaks, California. I'm representing CH2M Hill, and we did a peer review, a third-party review, on the flow estimates that were made. MR. YOUNG: And can you spell your last name? THE WITNESS: V-o-r-i-s-s-i-s. MR. YOUNG: All right. Thank you. THE WITNESS: And I wanted to talk about the result of our peer review so I'm going to make this kind of quick, because I know we have gone through a lot of this stuff just in our last the last things here. So what we were asked to do was look at the two different methodologies that were used to determine the spill and render our professional judgment on that. One methodology, the District's methodology, and the other methodology, what the State did. The first thing we did is we looked at

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

District, as well as from the State. We went through all the math on the spreadsheets just to make sure there wasn't a bust, because we saw there was a big discrepancy between the gallons that the State, Office of Enforcement said, and what the District said.

We then looked at the methodologies themselves, and started looking at, okay, what was a reasonable methodology to use.

And if I can have you go to 4725. Okay. If you can pull up the second thing -- now, this is from -- again, we showed this earlier this morning, but there was a training that was done for operators on determining sewer system overflows, and there were several methods that were identified that could be used.

Looking at those different methods and looking at what was happening in the system, the District chose to use the duration and flow method, as a method to use for that. The Office of Enforcement used the pump station method, which is method number 4. Those were two of the methods -- or they used a version of method 4.

So let's go back to the District's method. And in our conclusion is that the District's method was a good method, in that it was trying to

ones where they were looking at annular space, they did use the photographs that were part of that method.

Okay. Going to the State's method. When we looked at that, we found that there were -- okay -- and I want to preface by saying, our conclusion said look it, these are estimates. So no method is perfect.

And we did identify that, yes, we agree, that there are things that could have been missed in the system with the District's method, but given the circumstances, they did the best they could.

When we looked at the State's method, we ran into some issues with the fact that -- if you will go to -- I'm going to have you look at -- let's see here.

We will go into method 4, and that is on 433 -- 4733. If you will look at that method, the very last point says you compare a normal-day effluent flow, and then you can determine the effluent flow for that spill event.

Now, this was not a normal day. What happened on that day was there was a rainstorm. You had flooding. This was in no way a normal day. So to take a normal dry-weather hydrograph and translate that to try and turn that into a wet-weather hydrograph, doesn't make sense. It doesn't follow any

Page 450

Page 452

capture what was happening in the city.

When you use the duration of flow, you have to understand where the manholes are that are producing flow and try to estimate what the amount of flow is that is coming from the manholes or any other spot in the system that flow could be coming out.

And so the District used reconnaissance. After the fact, they went back. They looked at the manholes, and they documented field reports as to what the condition of the manholes were. Did they see open pit holes? Did they see that the manhole lid showed that it had been lifted somewhat? And they did the best they could to come up with an estimate.

I heard reference about the tables, you know, used in that method. They actually used -- had to use a hydraulic grade line, because unlike most of these methods -- because this was an abnormal circumstance, everything was flooded. So these tables and the things that you're using are based on if you had a spill on the day when there is no water on the

So they did use an approved method -they used the hydraulic applications method that has been used for that type of determination to determine the flow coming from those manholes. And then for the kind of engineering logic.

And if you go back -- and I will have you pull up just page 4719 of my report. If you look at that figure, the bottom line shows a normal dry-day hydrograph. That is the red line. The top line is showing during a flood event, what the hydrograph looked like. And this was actually the day before. This green line is what happened when their meter was running on the 18th of December, when there was also rain in the system.

And you can see the rain bars there, and you can see the steep decline. Once the rain stops, that hydrograph drops off very rapidly. And this is from December 18th. This was the day before the storm. So that is more indicative of what a hydrograph looks like.

So the bottom line is, you know, you cannot compare apples to oranges. You can't take a dry-weather hydrograph and try to make it a wet-weather hydrograph.

And I guess I'm kind of running out of time here. So I will kind of leave it at that, and open it up for questions. But our conclusion was that the District's method probably had more merit than what was used by the State, and that it was an approved

Page 453

TRANSCRIPT OF HEARING

1	method, and it is something that is justifiable and a	1	Q And the pump data that was available, you
2	little more reliable, and it tried to visualize what	2	do not use at all in your method?
3	actually happened.	3	A No. It doesn't come into play in that
4	MS. THORME: Thank you.	4	methodology, no.
5	MR. YOUNG: Cross?	5	Q Okay. Do you acknowledge that the
6	MS. MACEDO: I'm sorry. You didn't have	6	District always chose the lower volume when deciding
7	anything?	7	between the picture (phonetic) method and the tables
8	MS. THORME: No.	8	produced by CWEA?
9	MS. MACEDO: Okay. I just have a couple of	9	A No, because the District did not use
10	questions for you.	10	tables. Their calculations they actually had to
11		11	define the hydrology grade line, so they actually had
12	CROSS-EXAMINATION	12	the calculations imbedded in their spreadsheet to
13	BY MS. MACEDO:	13	calculate out what those pit holes were and stuff.
14	Q Do you to make sure I understand what	14	They couldn't use the tables. The tables
15	a peer review is. You did not create your own or do	15	are based on nothing over the top of the sewer. So
16	your own analysis of the spill water?	16	those are based on a non-sewer. When the sewer is
17	A That is correct.	17	flooded, you have to use the hydraulic grade line. You
18	Q Okay.	18	can't use that method. You can't use the table.
19	A We just looked at the two different	19	Q Right. It's my understanding the tables
20	spills.	20	are based on equations?
21	Q Do you acknowledge that the District	21	A They're based on equations, but they are
22	missed particular discharge points?	22	not based on a head of water on top of a manhole. They
23	A Yes, and I pointed that out in the	23	are based on the manhole being in the street, and there
24	report. That they could have missed.	24	is no head of water. There is a head of water on it
25	Q Yes. After hearing today's testimony, do	25	when it's flooded.
	Page 454		Page 456
1	you acknowledge the District missed a discharge point	1	Q Right. Correct me if I'm wrong. It's
2	in terms of the headworks?	2	based on a visual observation of how high a visual
3	A I can't say that, because I don't know	3	observation indicates that the spray is above the
4	enough detail about that situation to know what	4	manhole, correct?
5	happened to that part of it. Did it recede back into	5	A Right.
6	the plant? Was it pumped I don't know that.	6	Q Okay. And the District consistently
7	Q But it is possible that the headworks may	7	chose the lower of the two, between either the picture
8	have been the discharge point itself?	8	and their reference when they chose that or the
9	A I say it's possible. But again, what	9	equation?
10	happened to the water right after it discharged, is	10	A No.
11	what the issue is here, where it ended up.	11	Q No?
12	Q Okay. Based on the method that the	12	A That is not the way I when I looked at
13	District used and that you ultimately find reliable,	13	their spreadsheet, that is not the way I saw they had
		14	done that.
14	you essentially ignore the pump data; is that correct?	1	
14 15	you essentially ignore the pump data; is that correct? A Because the influent pump was out. So	15	MS. MACEDO: Okay. Nothing further.
15 16		15 16	
15	A Because the influent pump was out. So	15	MS. MACEDO: Okay. Nothing further.
15 16	A Because the influent pump was out. So yes	15 16	MS. MACEDO: Okay. Nothing further. MR. YOUNG: Any redirect?
15 16 17 18 19	A Because the influent pump was out. So yes Q But the	15 16 17 18 19	MS. MACEDO: Okay. Nothing further. MR. YOUNG: Any redirect? MS. THORME: No.
15 16 17 18	A Because the influent pump was out. So yes Q But the A so you're looking at what is actually happening in the system at the time. Q But	15 16 17 18	MS. MACEDO: Okay. Nothing further. MR. YOUNG: Any redirect? MS. THORME: No. MR. YOUNG: Okay. Mr. Jeffries?
15 16 17 18 19 20 21	A Because the influent pump was out. So yes Q But the A so you're looking at what is actually happening in the system at the time.	15 16 17 18 19 20 21	MS. MACEDO: Okay. Nothing further. MR. YOUNG: Any redirect? MS. THORME: No. MR. YOUNG: Okay. Mr. Jeffries? MR. JEFFRIES: No.
15 16 17 18 19 20 21 22	A Because the influent pump was out. So yes Q But the A so you're looking at what is actually happening in the system at the time. Q But A So you're trying to find that, and that is a proved methodology, yes.	15 16 17 18 19 20 21 22	MS. MACEDO: Okay. Nothing further. MR. YOUNG: Any redirect? MS. THORME: No. MR. YOUNG: Okay. Mr. Jeffries? MR. JEFFRIES: No. MR. YOUNG: Mr. Harris?
15 16 17 18 19 20 21	A Because the influent pump was out. So yes Q But the A so you're looking at what is actually happening in the system at the time. You did one with the State and with the District, and you were not asked to look at the RMC

TRANSCRIPT OF HEARING

1	till yesterday.	1	to the ocean. So you couldn't use Method Six, as well.
2	MR. HARRIS: Okay. So you weren't aware that	2	So two and four were the two methodologies that you
3	that even existed?	3	could have pulled, unless there was some other
4	THE WITNESS: I wasn't aware that it even	4	methodology, you know, that was not on that table.
5	existed.	5	DR. WOLF: So with your professional
6	MR. HARRIS: Okay. When you talk about head on	6	experience, you would say that out of the six, there
7	manhole covers, do you have any idea how deep the water	7	were really two methods to choose from?
8	was, when it flooded out?	8	THE WITNESS: Uh-huh.
9	THE WITNESS: It's my understanding that it was	9	DR. WOLF: And have you done other similar
10	somewhere around a foot. I don't know. It was at	10	studies?
11	different places it was different.	11	THE WITNESS: I have not done a similar study
12	MR. HARRIS: Okay. So about a foot of head.	12	to this. I have done a lot of infiltration and inflow
13	That's not a lot, if you consider what the gradient	13	analysis and SSTS studies and wastewater studies. Also
14	might have been, especially on the lower manholes. I	14	a lot of wastewater calculations with hydrographs and
15	don't know what the topography is in the general area	15	studies of hydrographs going into wastewater plants.
16	but, you know, it's 10 feet, 20, 30, 40, 50. You can	16	DR. WOLF: So you have not had an opportunity
17	end up with one foot of head on those lower manholes	17	to compare and contrast the two methods with other
18	and one foot of water wouldn't amount to much with	18	prior cases?
19	resistance with water flowing above; is that not	19	THE WITNESS: No, I never had a case where I
20	correct?	20	had to do this.
21	THE WITNESS: I guess you can say that, yeah.	21	DR. WOLF: All right. Thank you very much.
22	MR. HARRIS: Okay. Thank you.	22	THE WITNESS: You're welcome.
23	MR. YOUNG: Dr. Wolf?	23	MR. YOUNG: Mr. Jordan?
24	DR. WOLF: Could we go back to the slide called	24	MR. JORDAN: Nothing.
25	Volume Estimating Methods? This was a slide that shows	25	MR. YOUNG: Mr. Johnston?
20		2 3	
	Page 458		Page 460
1	six different methodologies. That was the very first	1	MR. JOHNSON: Nothing.
2	slide that you showed us.	2	MR. YOUNG: Okay. So this concludes this
3	THE WITNESS: That is 4726 25.	3	witness.
4	DR. WOLF: There we go. Can we zoom in? Yeah,	4	MS. THORME: Can we possibly take a break
5	thank you.	5	before our next witness
6	Now, there are six methods presented	6	MR. YOUNG: Sure.
7	there. Are every one of these methods are every one	7	MS. THORME: just for five minutes?
8	of these methods, an applicable method in this	8	MR. YOUNG: Who is our next witness after the
9	particular scenario that we had?	9	break?
10	THE WITNESS: No, they're not, no. You can't	10	MS. THORME: Mr. Aaron Yonker, who is the
11	use every one of these methods in this scenario.	11	person most knowledgeable designated for the District
12	DR. WOLF: Correct. So which ones are not	12	and our last witness.
13	technically feasible to use?	13	MR. YOUNG: And the last witness.
14	THE WITNESS: You know, you can't really	14	(Break taken.)
15	measure the volume of the area	15	MR. YOUNG: Okay. Folks, let's return to our
16	DR. WOLF: Okay.	16	places and return to our hearing.
17	THE WITNESS: because that doesn't really	17	Okay. Ms. Thorme, you have your last
18	apply. We weren't spilling flow into an open channel	18	witness.
19	where we could, you know, document how much was going	19	MS. THORME: Yes.
20	in. That is Method Number three.	20	THE WITNESS: Good evening, members of the
20		21	board and chairman. My name is Aaron Yonker. I am

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

anywhere to go? 1 sewer line -- that sewer line, the thing to remember 2 Essentially, yes. 2 is -- it's come up a few times tonight -- our sewer 3 3 MS. THORME: Okay. Can we have Exhibit 41, lines are about ten feet below the ground, twelve feet 4 please? below the around. 5 5 And can you explain these photos? So when we talk about a surcharge sewer 6 6 line pumping down some of the -- we talked about that Well, what you see here is a photo to the 7 7 earlier today -- that sewer line is way down below the same location. This is the treatment plant's entrance. 8 8 I think you have seen this picture today, perhaps not. ground. It's full of water down there. It eventually 9 This is -- the close-up here is at the 9 rises and surcharges its way up. The pipe is slanted 10 driveway at the treatment plant looking down across 10 to allow flow to the treatment plant. The water is at 11 11 sea level. It is going to slowly work its way up till Aloha and down towards Honolulu. This is during the 12 peak of the storm. As you can see, this is a news 12 it finds a facility it can discharge from. 13 13 exhibit from KSBY. Q Okay. Mr. Yonker, this slide was a 14 14 What you're seeing there at the bottom is screen shot of the flood that the prosecution team used 15 15 a same -- it's comparative of the same location taken at the top, are essentially the same view; is that correct? 16 at a different date. I believe this was in May or so, 16 17 17 of 2011, a few months later. But you can see the Α This was taken from the same video. This is a video that we encouraged them to look at to 18 18 conditions of that manhole and the dry conditions, the 19 street conditions, and of course, that water that was 19 support our evidence. 20 20 Q Okay. So we also have a dry-weather day encroaching into the treatment plant itself, is fairly 21 significant. 21 in that. And so the area that they were claiming was 22 22 bubbling up, is not the area where the cleanup is; is Q And so the District did an analysis of 23 each of the manholes that it believes spilled; is that 23 that correct? 24 correct? 24 They were mistaken in their location, and 25 25 they actually identified that as what they called A That is true. Page 466 Page 468 MS. THORME: Okav. Can we move to the next 1 bubbling up of a clean-up. It actually referred to a 2 2 day, please? The next slide. The next slide, please? location down by the RV structure. There is no 3 No, the next page, please. Thank you. 3 clean-out there. What you see there is a clean-out 4 Q And this was more evidence of the 4 structure. Meaning that is the terminus point of a 5 investigation that you all did after the spill? 5 collection system. It's not a manhole. It is the very 6 A That's true. We -- one of the aspects we 6 end of a pipe that allows the operators to get in there 7 7 did -- this is later on into our investigation. But and clean out if they need to clean out that system. 8 8 what we needed to do is identify each of the manholes, So there can be no further down 9 9 because the manholes at the time, as we mentioned, were connection down beyond that point. The homes can't covered by the lagoon water that had encroached up. 10 connect in there. If you have a home, it has got to be 11 There was spilling. There was no doubt that spilling 11 on the upstream of that to allow the flow. So that was 12 12 was occurring. The question was, where did it occur. an erroneous statement made by the State. 13 So what we needed to do was analyze each 13 Q Okay. So how did the sewer spill happen 14 one of those manholes and make a determination of what 14 on the 19th and 20th happen --15 type of flow would be coming from the manholes relative 15 The sewer spill on the 19th and the 20th 16 to that surcharge within the collection system, and how 16 happened for a number of reasons; three reasons 17 17 that might have happened and where it would have specifically. 18 happened. So we needed to investigate all the 18 I have already addressed the fact that facilities, take a look at those facilities, and really 19 the Oceano Lagoon, as well as the Arroyo Grande Creek 20 do an engineering assessment to determine how that flow 20 had come up and encroached onto the treatment plant in 21 really happened. 21 a very significant fashion. 22 22 Q Okay. So each manhole, you tried to make So that water combined with the -- that 23 an analysis of the amount of flow that had came out of 23 water combined with the incident that we had at the 24 it? 24 electrical pull box that we have referenced, allowing 25 A If you can picture a surcharge in the 25 that water to migrate down into -- again, this is a Page 467 Page 469

SEPTEMBER 7, 2012

1	picture of the headworks that we have showed many	1	through the pump into the discharge, traveling into the
2	times.	2	header. It cannot get there because the valve was
3	For clarity, this is the top of the	3	closed.
4	headworks. This is grade level. As I mentioned, the	4	So it was a really what I guess,
5	sewer pipes are about ten feet down. This right here	5	what you could call a perfect storm of events. Three
6	is about ten, twelve feet deep right here. I believe	6	significant events came together. Ones that you could
7	that Mr. Appleton said that is about forty feet deep or	7	not have foreseen in advance. And that was
8		8	typically, I guess in a nutshell, baseline calls of the
	so. It is not quite that deep, but it is a subgrade	9	spill that day.
9 10	structure.	10	Q Okay. So had any of these problems ever
11	The shunt trip itself was located up here	11	occurred individually at the plant previously?
12	(indicating) in the valve room. What you see down here	12	A Sure. Yes.
13	is the pump room. As the water enters in here, it	13	
14	enters down into this location, and it pumps up into	14	Q No. I mean, the flooding or the valve being closed or the
	this header and then crosses itself crosses the	15	_
15	wastewater up.	16	A Individually? O Yes.
16	The electrical pull box would be on the	17	•
17	outside area here. You can see pictures of that. That	1	A Oh, well, individually, we have had high
18	was the box that was raised to avoid this inner pump	18	rains and stuff like that. We have had not had
19	ponding.	19	no. Significant flooding, no. We have had significant
20	And it actually traveled down in through	20	flooding that has come on. You have heard testimony
21	there, traveling down through the shunt trip itself and	21	from residence flooding events not happening like that.
22	shorting it out. So there's significant water, is the	22	So the valve being closed, no.
23	first case.	23	Q All right. So was there any way to know all of these things would happen together on December
2425	The electrical conduits, the ponding that	25	19th?
2 J	caused that to travel down to the shunt trip was number	23	
	Page 470		Page 472
1	two.	1	A Well, as I just mentioned, short of
2	The third case was the discharge valve.	2	hindsight, I would say not. It's been in this
3	We did mention in prior testimony, we heard that	3	operation for many years with many people seeing this
4	this is the backup diesel pump.	4	through design and constant operation. Of course, that
5	This is a pump that the District had the	5	doesn't mean I would not see it.
6	foresight to install. Not a requirement, but the	6	Q So the plant has been able to weather
7	District functions off of these pumps here, and can do	7	very high flow swell conditions in the past without a
8	so accordingly up to about nine or ten MGD. This is an	8	spill; is that correct?
9	equivalent pump, nine or ten MGD.	9	A The plant is capable of handling nine to
10	Should there be an incident that they	10	ten MGD, wet weather flow. We have seen flows in the
11	need to do maintenance on these pumps, take it out of	11	past that are that high, and they have handled them
12	service, they can close this slide gate. And they can	12	perfectly well in the past.
13	institute the bypass pump, and they can do their	13	Q Okay. And would the electrical shunt
14	maintenance while they are bypassing into the header	14	trip problem alone have caused this spill?
15	structure and into the plant and entirely bypassing	15	A The electrical shunt trip alone? No,
16	this.	16	because we have a bypass pump, as I mentioned. The
17	In the case of the December 19th case, we	17	bypass pump could bypass the headworks if it failed.
18	actually saw water come through here and entering the	18	As you see here in this exhibit, we
19	headworks. The shunt trip failed. The pump stops so	19	actually had a repeat event happen after the December
20	this level started to rise up. It started to rise into	20	event, and that happened in October. You can see the
21	the collection system. And the significance of that	21	date. It's hard to see from here. It was October 4th
22	third event, is the fact that this discharge valve had	22	of 2009. We had a very similar event happen. This was
23	inadvertently been closed during prior maintenance.	23	very enlightening to us because it actually helped us.
24	So when this pump was started up, this	24	But essentially what happened, in August
25	discharge pipe that you see here, caused some suction	25	of 2011, we reconductored that influent wiring. We

Page 471

TRANSCRIPT OF HEARING

1	created an air gap. You heard testimony from Mr. Thoma	1	estimate that stands up. And to us, that evidence was
2	this morning about creating an air gap over that wall.	2	speaking to the people on the streets, taking pictures,
3	Regardless of that, we still had an event	3	referencing news footage, performing calculations and
4	happen where they shut down again. And that is what	4	taking a look at it from as many different angles as we
5	really clued us in to the fact that this was a shunt	5	can. As Matthew Buffleben had mentioned, as engineers,
6	trip issue. We initially thought it was a motor issue,	6	we tried to look at that from all different sides and
7	a breaker issue. We conducted the breaker study. We	7	what is most viable.
8	tried to resolve this issue. We created pipes, and	8	Specifically, as you can see here, we
9	this is really what keyed us in to the fact that it	9	needed to report that at the spill location. We can't
10	truly was a shunt trip issue.	10	just come up with a big giant spill volume and then try
11	Q Okay. And the final thing is on the	11	to report that in CIWQS.
12	bypass valve. Was the fact that that valve was closed	12	So our understanding at the time, was
13	in itself, cause a spill?	13	that CIWQS was maturing. And one of requirements of
14	A No, the well, the valve had been	14	CIWQS, at the time, is that it needs to specifically
15	closed prior to the spill for I'm not sure how long,	15	identify the location, the latitude, the longitude.
16	but it worked perfectly. The only time you needed that	16	Q And did the District get word from the
17	to be opened is when you needed to bypass a pump	17	Water Board to report based on manholes, at least
18	itself.	18	initially?
19	Q Okay. And what about the allegation that	19	A Yes. Yes, we did.
20	the District had in 2004 had budgeted for a rewiring	20	Q And how did you get that word?
21	project that was supposed to have prevented this issue?	21	A Through many forms. You can see here, my
22	MS. THORME: Could you put up Exhibit 51,	22	understanding well, I spoke with Jim Fischer this
23	please?	23	morning. My understanding from Jim is that South
24	THE WITNESS: What you see here is an exhibit	24	County needs to report the SS
25	that shows reconductoring. It's kind of hard to see.	25	THE REPORTER: I'm sorry, but are you reading
	Page 474		Page 476
1	I guess if you could zoom on the lower box down there.	1	something?
2	Bill Thoma testified a little bit about	2	THE WITNESS: Yeah.
3	this earlier. But what you see here is the '86	3	THE REPORTER: Could you slow down then.
4	originally installation, the '86 upgrades to the plant.	4	THE WITNESS: Sorry.
5	It was installed with fireproof wiring, so that is the	5	My understanding from Jim is that South
6	wiring. That is the W (phonetic) designation that Bill	6	County needs to report the SSO's from each of the 21
7	talked about. And so it was also, according to his	7	manholes separately.
8	testimony, supposed to have seals at that time. So	8	BY MS. THORME:
9	BY MS. THORME:	9	Q And were those manhole spills reported as
10	Q Okay. And the District included three	10	category one spills?
11	different spill volumes in it's initial estimates; is	11	A Yes, they were.
12	that right?	12	Q And were they certified within the time
13	A Yes, it is.	13	frame required by the sewer system permit?
14	Q Okay. And why did the District select	14	A Yes, they were.
15	the estimate that it selected?	15	Q Okay. And was the did the Water Board
16	A Well, it selected initially we	16	ask the District to provide an analysis of the
17	submitted all three because we wanted to be	17	advantages and disadvantages of the each of the
18	transparent, and we wanted to provide the Water Board	18	spill volumes?
19	with everything we had, but we wanted them to see	19	A Yes. That was a report that I authored
20	everything.	20	myself.
21	We selected the one we selected because	21	Q And did you provide that analysis to
22	it was the most defensible. Everything we had been	22	them?
23	learning from the State and the Regional Water Board is	23	A I did.
24			
	that we needed to have great defensible evidence. We	24	Q Okay. And did the District undertake
25	that we needed to have great defensible evidence. We needed to support our claim. We needed to bring an Page 475	24 25	Q Okay. And did the District undertake remedial activity after the spill?

SEPTEMBER 7, 2012

1	A Yes, we did.	1	to the 12-foot flood elevation.
2	Q And did you provide the Water Board with	2	Q So even if you used the prosecution
3	a list of those remedial activities on January 3rd of	3	teams' estimate, by the time that the floodwaters
4	2011 Exhibit 9, please, at page 9?	4	receded out to the ocean, there would have been a 69 to
5	A These are the various corrective actions	5	1 dilution?
6	that we came up with after the spill event. Of course,	6	A Yeah. Using their numbers, that would be
7	one of our intentions was to make sure that spill never	7	correct.
8	happened again.	8	Q Okay. And was there also evidence about
9	And so these are the remedial actions	9	the unlikelihood of harm to fish?
10	that we developed to institute so to make sure it	10	A We as part of the State's
	·	11	•
11	never happens. Yes, this is a copy of those documents,	12	investigative order, we responded with a technical
12	and yes, I did.	13	report explaining what methods we would try to take to
13	Q Okay. And did the District provide any		look at health and the ecological impact.
14	evidence about mitigating factors to harm?	14	And one of the steps that we did
15	A Yes, we did.	15	initially, was contact environmental scientists and
16	Q And did any of those have to do with the	16	is it okay to say his name or State Parks provided a
17	beaches and the beach closures?	17	letter to us stating that they have been conducting
18	A We provided evidence to the State,	18	studies in the Oceano Lagoon for a period of eight
19	talking about the various components of the beach and	19	years to monitor the fish and the impacts of the
20	that the beach would be closed for an extended period	20	off-road vehicles they have on the beach crossing as it
21	of time. We supplied information relating to the	21	crosses over to that area. And it came back noting
22	closure of the beach prior to the storm, through the	22	that there was no observed impact or pollution to the
23	duration of the storm and beyond for several days, due	23	fish population or health. And they
24	to safety and harm related to that storm event itself,	24	Q And did you also submit evidence about
25	as well as additional monitoring and reporting	25	the E-coli and bacteria levels in the lagoon without
	Page 478		Page 480
1	requirements that were performed by the county.	1	regard to the spill, just what natural levels of E-coli
2	Q So it was closed before the spill	2	would be?
3	happened?	3	A Yes. As part of the technical response
4	A I believe it was closed on the 18th.	4	to the State's investigation, we did supply
5	Q And did the District provide how much	5	information. There were investigated test sites here.
6	floodwater was spilled, in addition to the event from	6	These bigger locations show those tests performed by
7	the District?	7	the County. These smaller locations show the tested
8	A How much floodwater was spilled?	8	locations that were performed by the District.
9	•	9	•
10	Q How much floodwater there was in relation to the	10	
11		11	A This is our I guess what we did is we monitored for a period of one year. And what you
12	A Oh, yes. We provided the State with	12	·
	information on floodwater that had passed through the		see here is we see, what I will consider to be
13	Oceano Oceano Lagoon. This was a private study that	13	highly elevated, in this case, with E-coli, within
14	was commissioned by the county to determine that, and I	14	those locations.
15	think they came up with 69 million gallons of water		And so this is each one of those
16	sitting on top of the Oceano Lagoon that had passed	16	locations. It's kind of hard to see for the audience,
17	through the headworks I'm sorry, the flap gates.	17	and I apologize.
18	Q Okay. So this is Exhibit 63-2. So this	18	This location is one through location
19	is the County's estimate	19	ten. These trend on a monthly basis up and down, and
20	A Yeah	20	you can see the variance. But at all times they're
21	Q of the floodwaters?	21	highly elevated. This is the what is considered a
22	A what you see here is the 69 million	22	warm classification from what we were assessed. And
23	gallons that they came up with. It's an area at 4.9	23	our assessment was that the beneficial use is already

24 highly polluted.

25

121 (Pages 478 to 481)

Q Okay. And do we -- does the District

24 feet depth over standard depth. On a previous e-mail

within this packet, it states that that is equivalent

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

have any evidence of anyone being ill due to this sewer today -- if I'm not mistaken, they opened up the board. 2 spill? 2 They were able to get in there and find out that it was 3 3 We have not received, to this day, any a programming issue -- the pump had been set by the 4 information to the District that indicated anybody did manufacturer to shut down for a one-hour period. They 5 get sick or --5 didn't know if it was something they had going on or 6 Q Did you do any outreach to people? 6 what. But it was something when the District received 7 7 We did a bunch of outreach. We did Α the pump, that is the condition it came in. 8 8 door-to-door. We handed out flyers. We went to a So they had a little bit of training 9 number of agencies, community meetings. Two of which 9 on-site that day. They got the pump working. I think 10 were televised. We participated with the County. They 10 by noon or so, they understood how to work it, but they 11 held a community outreach for the flood event on April 11 had to be there and available every hour. So that is 30th of 2011. 12 12 why you had the blips occurring. 13 We prepared and manned a booth with a 13 Q So it was not a mechanical issue? 14 whole bunch of spill information we had with 14 Mechanical, no. 15 overflowing manholes. We had literature. We had a Okay. And you included -- the District 16 PowerPoint presentation going of the spills that we had 16 included in their estimates that were given to the on record. The flood that we had. We had questions --17 Water Boards, Mr. Appleton's estimate? 18 if you knew anything, please contact us. We had a 18 Initially, yes, we included three 19 sign-in sheet. Just trying to get the word out there. 19 estimates, and within that was Jeff Appleton's estimate $2\,\mathrm{0}$ $\,$ And again, just trying to do the right thing. We just 20 as well. 21 wanted to do this right and fair, and get a good 21 MS. THORME: Okay. Could you bring up Exhibit 22 assessment of what was happening. 22 9, and I don't know exactly what the page is. 23 Q And did any residents file claims for 23 MS. COLLIER: Okav. 24 damages in their homes with the District? 24 /// 25 A No. 25 BY MS. THORME: Page 482 Page 484 And did the District do some calculations Q Okay. And just to do some housekeeping 1 2 before I get into another issue -- are there drains 2 to correct Mr. Appleton's estimates? inside the electrical pull boxes? 3 3 Α Yes, they did. 4 4 The pull boxes on-site, do have drains. Α Q And those were provided to the Water 5 Q And where do those drains go? 5 **Board?** 6 It's my understanding the drains go to 6 This is -- as far as I can tell, this Α 7 7 the storm drain system. The drains are directly next appears to be the copy of that that went to the board. 8 to the headworks, go to the headworks structure. 8 You can see --9 9 That's --UNIDENTIFIED SPEAKER: Here you go. 10 Q Okay. And can you talk a little bit 10 THE WITNESS: You can see some of these changes 11 about the pump shutting off? The issue of the pump here. Mr. Appleton today testified that -- you know, 11 12 12 he gave a timeline of events. That was kind of a shutting off? 13 Α You mean the diesel bypass pump? 13 stumbling block for us as we begin our initial 14 Q Yes. 14 investigation because we were initially going off of 15 The diesel bypass pump was initiated his timeline. We found it to be a faulty timeline. It 15 16 after the spill at the slide gate. You heard testimony 16 didn't actually match up with power records, alarm 17 17 about that today. indications that we had on-site, and so you can see the 18 And what the operators found out, after 18 evidence. 19 that pump was started and once operations were going 19 At 10 a.m., which changed to 10:30, and 20 20 and processing wastewater into the plant, the pool that resulted in a different value of flow. The 4 MGD 21 would intermittently shut down for about every hour or 21 was changed to 4.2, because it was checked with the 22 22 so. And the operators would have to scramble and try meter, and so there some slight variations there. 23 23 to get the pump started. This is the copy we submitted to the 2.4 That was just about the time that FRM 24 Water Board (indicating). showed up on-site, as Jeff Appleton testified to 25 MS. THORME: Okay. Can you put up Exhibit 55,

Page 483

TRANSCRIPT OF HEARING

1	please? Okay.	1	I'm sorry, I'm just
2	Q Okay. And does this show where the	2	MS. THORME: Could you move maybe move that
3	storage was?	3	microphone higher?
4	A Yes, it does. This shows just for the	4	THE WITNESS: Sure.
5	record, this is a treatment plant, obviously. These	5	MS. THORME: There you go. That should be
6	are the sludge lagoon drying beds. This is the	6	better.
7	headworks structure, and then this is the sludge	7	MR. YOUNG: Just for the record, he's referring
8	beds the lagoon beds.	8	to Exhibit 55 dash
9	Q And where are the storm water sumps that	9	MS. THORME: Yeah. Exhibit 55 dash, 1, yes.
10	were pumping water back to the headworks?	10	MR. YOUNG: Okay.
11	A They are located in various locations.	11	MS. THORME: Yes.
12	What we have is a we do have a site draining	12	O And the water that was stored in the
13	facility. This exhibit that would work better for	13	lagoons and the drying beds, was that eventually pumped
14		14	back and treated?
15	Q No, I want to show where the flooding is	15	A To the best of my knowledge, what we have
16	in relation to those sumps?	16	in the headworks structure is a manifold the
17	A Okay. So what we have here is there is a	17	manifold valve that has one valve for each of the
18	sump over here. You can see it at this location	18	drying beds. Those drying beds have sand filters on
19	·	19	them. The water percolates down in there and travels
20	(indicating). This actually drains. It's actually an elevated pad over here that it has a force main that	20	back to a pipe in the headworks and circulates through
21	·	21	the treatment. Those just happened to be opened, and
22	pumps over here back to gravity.	22	it is my understanding those were opened the next day
23	There is another one right here. And I	23	
24	believe there is one right here. So there is three on-site.	24	and drained in the next day or two. This location here, this is lined with a
25		25	red rock. It's designed to be somewhat impermeable.
23	The site is it consistently has site	23	
	Page 486		Page 488
1	drains like any parking lot or parking structure	1	There is a manhole structure in here.
2	normally would. The majority of it is on gravity, but	2	The reference that Jeff made about it
3	then runs to the force mains. Those force mains pump	3	being about 30 days. That was a new statement about
4	and redirect through a network of pipes, and eventually	4	that. I have never heard of to the best of my own
5	work through the headworks and coming in the headworks	5	knowledge, I can only say that it would have been
6	right here.	6	pumped back. I can't say for sure and
7	Q Okay. So the sumps that were over there	7	Q Okay. Speaking of things that
8	in the floodwaters, were just continuing to pump that	8	Mr. Appleton said, he testified today that he had told
9	floodwater into the treatment plant, is that the way	9	the District numerous times about the lack of the
10	that I understand it?	10	conduit seals. Can you address that, please?
11	A It was yeah, this is the water this	11	A I'm not sure if I'm too familiar with
12	is the water that had encroached on-site, so these	12	what you're asking, but as far as the yearly visits
13	sumps over here were overwhelmed. But you can also see	13	that he made and
14	in another picture that we don't have here, there was a	14	Q Well, he testified that he told the
15	bunch of water back here that was overwhelming this	15	District numerous times that the seals were missing and
16	sump pump as well. So, yes, if you turn it back to the	16	they needed to be replaced?
17	headworks, and now it's going	17	A Yeah, I have never heard that story
18	Q So those sumps were pulling in water that	18	before until this day. And I have not heard that from
19	was not necessarily rainwater falling on the industrial	19	Appleton or anybody.
20	part of the treatment plant?	20	Q And did you review his deposition
21	A For the most part, I would say that is	21	testimony?
22	valid especially in this area	22	A I did.
23	Q Okay. And	23	Q And did he mention that in his deposition
24	THE REPORTER: Excuse me	24	testimony?
25	MR. YOUNG: Could you speak up a little bit?	25	A In his written deposition testimony?
i	Page 487		Page 489
	1 450 407		1 450 407

Q It was the date that his deposition was taken by the Water Board?

A Oh, oh, I did review it. I reviewed the majority of it, and I'm sorry, I don't recall.

MS. THORME: Okay. Yeah, put up Exhibit 44, please.

Q Can you explain what this is?

A Yeah. This is -- what you're seeing here are two things. This is an upper map. I think you have seen this earlier today. This is the treatment plant here (indicating). This is the Security Court area here -- what I refer to as the Security Court area. It is actually made up of many roads.

This is the lagoon. This is the lagoon that encroached into the homes, working their way on to the treatment plant. And it was encroaching up to about a 12-foot elevation before it finally reached a peak, which came across these banks here, and back to the few homes in this area, and a few homes in this area, and all of these homes here (indicating).

The significance of this picture is that what we did is we took this span shot of this overhead map. And what we really wanted to express was that this area is in a bowl. Even though it's upstream from the treatment plant -- upstream location, it dips down

manhole above that red line, is not discharging sewage. So you can see the number of facilities included, and these are the 21 homes that were reported to the State as part of the sewage spill.

red line is discharging sewage. Anything that has a

$\,$ Q $\,$ Okay. So some of the letters that came in where people that had lived on Juanita Street --

A Yes.

Q -- can you tell me if that was near any of the manholes that spilled?

A Juanita Street was not near any manholes that spilled. And the reason it was excluded is because there is a location here -- you cannot see it, but this is along the ocean. It's called the Strand. These home are on an isolated collection system, which pumps over to a forced main lift station. That forced main lift station deposits itself into the District current up here at GBA, meaning it has a check valve that flows in a one-way direction.

Okay. So even though we surcharged and we would have gone down and probably impacted that portion of the pipe, we wouldn't have pushed into that system, because we would have been restricted from that valve.

O So I don't believe this had been shown

Page 492

Page 490

before it goes upstream.This is where the

This is where the flooding occurred. It is also where our spill occurred. When the pump stops we start to surcharge our lines, we discharge through these low-line manholes.

What you can see here is -- you can see the floodwater in blue. This is the swollen lagoon as it is at various locations. It's difficult to see that these lines extend to each manhole. So that manhole right there, goes to that manhole. This one here, comes to that (indicating). So this is whole area was surrounded in water.

This area here by the G15 was surrounded in water. What you see is that along here, we get elevations that are, I believe to be in the 15, 16, 17-foot range where this manhole is here about 10-and-a-half feet.

So these manholes, in our best opinion and strong understanding, that these manholes were excluded from this spill. These manholes were excluded. What you see these two lines being, the blue being the surface elevation of the water, and the red being the calculated hydraulic gradeline that existed in the sewer line.

Anything that has this manhole below that $Page \ 491$

today. This is Exhibit 44. And just -- can you tell
 us what this is -- 49, I'm sorry?
 A What you're seeing here is basically a

A What you're seeing here is basically a variation of the map that you just saw. This is the same map. This shows the treatment plant. This shows the Security Court home locations.

In addition -- well, just for clarification, the black solid line is the District's trump line as it extends out into the satellite agency to collect sewage from them. The dash lines represent the satellite collection system.

The significance of the picture here is the blue. This is the water. This is a combination of our assessment and study that we performed and where that water went to. It was very important for us to know where that water was, what elevation it was at, so that we could therefore determine that discharge rate for each of those manholes.

Coincidently, our calculations that we came up with were within two or three inches to what the county did, and it -- and with that study, again, studying that and quantifying that with the volume of water that passed through the lagoon.

The significant point I would like to make here is that a board member had asked -- Mary or ${\rm Page} \ 493$

124 (Pages 490 to 493)

TRANSCRIPT OF HEARING

```
the last technical witness -- you know, is it possible
                                                                 1
                                                                     These are the water ways, the streams, the creeks, the
2
     that that gradient could possibly affect that water at
                                                                 2
                                                                     oceans which are established within the general basin
3
                                                                 3
     the line or the manhole and produce a different
                                                                     plan, as either a warm water, fishery, a place to wade,
4
     discharge.
                                                                 4
                                                                     a place to drink or swim.
                                                                 5
5
              The important characteristics to remember
                                                                              What you see here is the range on this
6
     is that this is a constant elevation. Water sea level,
                                                                 6
                                                                     particular potential to harm is zero to five. If you
7
                                                                 7
                                                                     remember this, the State feels this spill in and of
     this is the bottom of the bowl. This elevation is 12
8
     feet. That means every manhole that is at only 12 feet
                                                                 8
                                                                     itself should be a five in major.
9
     elevation is covered with water.
                                                                 9
                                                                              Now, I would just like to kind of
10
              Manholes above 12 feet in elevation are
                                                                10
                                                                     highlight some of that. What that means, there is an
11
                                                                11
     not covered in water. So that means that the same
                                                                     extremely high threat to beneficial uses. There is
12
     pressure is present at each one of those manholes
                                                                12
                                                                     significant impacts to aquatic life and human health.
13
     relative to the hydraulic gradeline of the sewer
                                                                13
                                                                              There was high potential for threats in
14
                                                                14
     system.
                                                                     the water to human health. We just don't feel that is
15
              Okay. Can you point out what part of the
                                                                15
                                                                     the case. It was a tragic event. It was an
16
     entire sewer shed that this flooding occurred in?
                                                                16
                                                                     unfortunate event.
17
              This is the boundary of the District's
                                                                17
                                                                              But as you can see from the
18
     service -- service boundary, in which all of the number
                                                                18
                                                                     bacteriological testing that we did in the Oceano
19
     of agencies are encapsulated. It's the City of Arroyo
                                                                19
                                                                     Lagoon, the Oceano Lagoon water itself was highly
                                                                     contaminated with raised levels of bacteria.
20
     Grande, the City of Grover Beach, and Oceano Community
                                                                20
     Services District. Down here is the wastewater
                                                                21
                                                                     BY MS. THORME:
22
                                                                22
     treatment plant, and the flooding occurred right here
                                                                               Excuse me, Mr. Yonker, but we're going to
23
     (indicating).
                                                                23
                                                                     have to move on.
24
                                                                24
          Q Okay. Thank you.
                                                                          Α
                                                                               Sorry.
25
                                                                25
                                                                          Q So the -- I have an exhibit. This is in
          MS. THORME: Can we have Exhibit 52, please?
                                                     Page 494
                                                                                                                     Page 496
         MR. COLLIER: Okav.
                                                                     rebuttal to the ability to pay stuff that was done this
                                                                 2
2
                                                                     morning. So this is Exhibit 117. I will pass it out.
    BY MS. THORME:
3
         Q Did the District propose different harm
                                                                 3
                                                                     If my time can stop while I'm passing.
4
    factors than the prosecution team?
                                                                 4
                                                                          MR. YOUNG: You have about two minutes left.
5
                                                                 5
         A Yes, it did.
                                                                     I'm just wondering, was that going to be sufficient for
6
         Q And did these penalty factors come from
                                                                 6
                                                                     you to finish with this witness?
                                                                 7
7
    the 2010 enforcement policy?
                                                                          MS. THORME: No.
8
                                                                 8
         A This is a copy of the 2010. Not a copy,
                                                                          MR. YOUNG: How much more time would you need
9
                                                                 9
     but it's a copy that I created of the 2010.
                                                                     to --
10
                                                                10
         Q Okay. And -- so the District believes
                                                                          MS. THORME: Pass these down.
11
    that the harm factor should be two instead of five, and
                                                                11
                                                                          MR. YOUNG: -- to complete with this witness?
12
     why do you believe that?
                                                                12
                                                                          MS. THORME: I have just one -- we were going
13
                                                                13
         A Julie -- I'm sorry. The State --
                                                                     through the penalty factors, and so that is what I have
14
         MS. MACEDO: That's okay. We're on a first
                                                                14
                                                                     remaining. I wanted to go through him and then we
15
                                                                15
     name basis. Don't worry about it.
                                                                     still have closing argument.
16
         THE WITNESS: I'm sorry, Ms. Macedo. I'm sorry
                                                                16
                                                                          MR. YOUNG: Okay.
                                                                17
17
     about that -- did a great job of going through the
                                                                          MS. MACEDO: Closing is not counted in your
                                                                18
1.8
     methodology that -- walked each of you through the
                                                                     time.
    process, and let you see the steps that go into it.
                                                                19
                                                                          MS. JAHR: Yes, it's separate.
                                                                20
20
    Albeit, what she failed to do is really show you some
                                                                          MS. THORME: Okay.
     of the definitions that are required. She did kind of
                                                                21
                                                                          MR. YOUNG: Would an extra ten minutes be
22
                                                                22
    talk about them. It is much easier to see them.
                                                                     enough?
23
             You can see here. This is factor one.
                                                                23
                                                                          MS. THORME: It would help. Yes, thank you.
                                                                24
24 This is the very first factor that she worked on. This
                                                                          MR. YOUNG: Would that be sufficient for you to
     is a harm for potential harm and beneficial uses.
                                                                25
                                                                     finish?
                                                     Page 495
                                                                                                                    Page 497
```

1	MS. THORME: We will do our darndest.	1	when he was getting information is that the right
2	MR. YOUNG: Okay.	2	So he was using the 5 million dollars
3	BY MS. THORME:	3	that included costs that were in that LAIF fund, and he
4	Q Okay. So can you explain what this	4	was assuming that that was all money that could be
5	document is, Mr. Yonker?	5	touched, and that is not the case?
6	A This document appears to be a District	6	A That was my understanding of his
7	staff report to the board of director in the San Luis	7	statement today. And if it relates to these numbers
8	Obispo Sanitation District. Subject: Monthly final	8	here, I would say that would not be correct.
9	review. This looks like an overview of the summary	9	Q Okay. So this is the most current cash
10	statement and is describing the current funds as they	10	flow document that we have for the District; is that
11	exist for the various funds relating to those service	11	correct?
12	fees from the various member agencies, as well as other	12	A It's dated August 15th, and it talks
13	funds	13	about a financial summary for July 31st, 2012.
14	Q Okay. Mr. Yonker, if you can look at the	14	Q Okay. And what is the net income year to
15	second page for me	15	date? Is it a negative number?
16	A Okay.	16	A The net income year to date is shown as a
17	Q and it has different operating	17	loss.
18	different funds. Can you tell me the three different	18	Q Okay. All right. If we could go back
19	funds that are there?	19	to
20	A Fund 19 is the operating fund. Fund 20	20	MS. MACEDO: I actually have something for the
21	is	21	record, and I don't care if it's on my time or not.
22	THE REPORTER: I'm sorry, but could you speak	22	But is this the first time the
23	up a little bit?	23	prosecution team is being provided with this documents?
24	THE WITNESS: Yes. Fund 19 is the operating	24	MS. THORME: Yes, because we just got it today
25		25	for rebuttal to the Dr. Horner's testimony.
23	level I'm sorry, the operating fund. And fund 20	2.5	
	Page 498		Page 500
1	is the expansion fund, and fund 26 is the replacement	1	MS. MACEDO: So presumably this document
2	fund.	2	existed as of August 15th, 2010, correct?
3	BY MS. THORME:	3	MS. THORME: 2012.
4	Q Okay. So if you look at the cash with	4	MS. MACEDO: 2012 I'm sorry. Correct?
5	the LAIF, and you add that row, there are some that are	5	MS. THORME: I would believe so, that is the
6	negative well, some that are positive, and it comes	6	date of it.
7	up with what the District wide amount for that cash	7	MS. MACEDO: And so when I asked you if
8	with LAIF?	8	Dr. Horner could leave, and you said yes, and then this
9	A Yes. For let me just see yeah,	9	document comes up at 10:00 at night, you knew
10	cash with LAIF, looking at the District wide, I see	10	Dr. Horner would not be able to respond to this
11	\$3,400,504.	11	document. I just wanted that on the record.
12	Q Okay. And what is the amount in the	12	You can continue.
13	expansion fund?	13	MS. THORME: Okay. So if we can go to Exhibit
14	A The expansion fund would be within the	14	52-8?
15	LAIF?	15	Q Okay. So the Office of Enforcement is
16	Q Yes.	16	proposing 1.1 for culpability; is that your
17	A That is \$5,733, I'm sorry \$5,733,546.	17	understanding?
18	Q And isn't the fund 20, the expansion, the	18	A That's correct.
19	fund that the fund that is funded through	19	Q And the District believes that lower
20	connections the fees that cannot be touched? That	20	number would be a better number; is that correct?
21	is the reserve fund?	21	A We had assessed it and determined it
22	A That is correct. As far as I know, that	22	
23	is the fund that cannot be touched.	23	should be a lower number, so somewhere around 3.5
24			and point 9.
25	Q Okay. And so if we can look at the this is the document that Dr. Horner had this morning	24	Q And quickly, can you say why?
2)		23	A Sure. The testimony is what a reasonable
1	Page 499		Page 501

TRANSCRIPT OF HEARING

1	and prudent person would have done or not done under	1	the State Board required you to report every spill
2	similar circumstances.	2	location; isn't that right?
3	This is a circumstance relating to the	3	A To report every spill location?
4	December 19th spill, and in our opinion, everybody on	4	Q Right.
5	that site was doing everything they could to return	5	A Yes, correct.
6	that plant back into a normal operating plant.	6	Q Why didn't you report then, the headworks
7	They and again, this was an act of God	7	as a discharge point?
8	event. The bypass event, the diesel pipe was in place	8	A The headworks had from my
9	prior to the spill	9	understanding, headworks was discharging up and over
10	Q And it was an emergency situation?	10	the top of the headworks structure back at headworks
11	A And this was an emergency situation.	11	itself, and there was some stuff that was coming out
12	Q Okay. So then the other factor is the	12	and adjacent to the plant.
13	cleanup and cooperation. And so the Office of	13	That was all part of that ponding that
14	Enforcement is proposing a one, is that your	14	you saw in that picture, which was headed to a drain
15	understanding?	15	works, which is headed right back in the headwork
16	A That's correct.	16	structure itself.
17	Q And the District is proposing a lower	17	So at the time, the draining system at
18	number, and what is the main reason for that?	18	the plant was returning that wastewater to the
19	A Well, the District has gone to great	19	headworks structure back to the structure to my to
20	lengths. We have provided numerous documents. We have	20	the best of my knowledge, that was the situation
21	basically laid everything we have on the table. We	21	reported.
22	have been cooperative with the State.	22	Q So you disagree with Mr. Appleton's
23	We have attended numerous meetings up in	23	testimony that it represents and I guess,
24	Sacramento just to make sure that they understand it	24	Dr. Buffleben's testimony, that it was actually a
25	and accept it and see where we're coming from. It's	25	rather significant discharge at that point?
	Page 502		Page 504
	1.180.002		1480001
1	obvious tonight, they don't. They still think we're	1	A I do. I did not hear testimony from
2	referencing tables that weren't mathematically and	2	either of them about the elevation of that grade or
3	inherent based equations. But we have gone, in our	3	that
4	opinion, above and beyond what we could do to try to	4	THE REPORTER: Excuse me
5	help and support and come to an even agreement and do	5	THE WITNESS: that grade relative to the
6	what is fair and	6	hydraulic gradeline on that system, so I disagree with
7	Q Okay. And did the District provide	7	them, yes.
8	evidence of a large loan commitment that it has for its	8	BY MS. MACEDO:
9	cogeneration plant?	9	Q I believe the District showed a slide
10	A Yes.	10	show that was a presentation of sort of acceptable
11	Q And just for reference, for the board	11	methods for calculating SSO's, and one of them was the
12	members, that was in Exhibit 94.	12	duration of the flow method. And you heard testimony
13	And did the District also do a	13	today, that it acceptable in certain instances and in
14	sensitivity analysis to see how the penalty would	14	some instances, we should consider it unreliable.
15	change if the penalty factors were modified?	15	What is your understanding of the
16	A It did.	16	duration and flow method?
17	Q And now we would have you look at Exhibit	17	A Well, the duration and flow method, as
18	61.	18	was indicated in the State's response, is a method
19	Okay. I am going to reserve the rest of	19	which which they still support in this particular
20	my time for redirect.	20	case. They felt it would have been appropriate for a
21	MS. MACEDO: Okay.	21	single manhole. So to that I would say that
22		22	individually, these were single manholes. We took
23	CROSS-EXAMINATION	23	we looked at each one individually and got responses
24	BY MS. MACEDO:	24	from each one of those hydraulically based upon the
25	Q So Mr. Yonker, it's your position that	25	principals and back to the flow equations.
	Page 503		Page 505

TRANSCRIPT OF HEARING

			·
1	Q Yeah.	1	put they have to be up to speed on all the issues,
2	A And what I did see, is I saw several	2	so they can testify accurately. So we have designated
3	manholes that were discharging pit hole locations. You	3	Mr. Yonker as the person most knowledgeable. So when
4	saw testimony of those today in photographs that showed	4	she's saying "you," I want to make it clear, it's the
5	pit hole locations coming out of that water way that	5	District.
6	are in line with the pit hole height, which are	6	MS. MACEDO: But I believe I'm allowed to ask
7	spreadsheet calculations determined as they should be.	7	Mr. Yonker questions as an individual, correct?
8	Q Yeah. I don't mean to interrupt you, but	8	MS. THORME: We did not put him on as an
9	in terms of my question, I meant, you know, how is it	9	individual.
10	applied? Is it something that you have to be there	10	MS. MACEDO: So you're only allowed to testify
11	contemporaneously to observe the flow at the time it is	11	as a District, not as an individual?
12	occurring?	12	THE WITNESS: I would say that is a legal
13	A The way the State Board understood it to	13	question to be decided.
14	mean, is they	14	MR. YOUNG: You know
15	Q I'm sorry. I'm asking for your	15	MS. MACEDO: Okay.
16	understanding.	16	MR. YOUNG: let me just think about this.
17	A My understanding is, no. You do not need	17	He still has to have knowledge of all of
18	to be there to make those kinds of assessments with the	18	these things he's testifying to
19	hydraulic relationship to the discharge	19	MS. THORME: Right. And he does
20	Q Okay. So let me ask you two questions.	20	MR. YOUNG: as an individual.
21	One, did you attend the State Board,	21	MS. THORME: Right. He does have knowledge
22	either training or you know, program that was put on	22	because he's gotten up to speed on all of the topics.
23	that you submitted	23	So he can testify to all the topics, but he may not
24	A I did not attend.	24	have personal knowledge of each thing.
25	Q Okay. And secondly, when you or the	25	MR. YOUNG: Okay. So he's been given
23		23	-
	Page 506		Page 508
1	District used the duration of the flow method, is	1	information, because he's testified as to the funds,
2	was all your methodology conducted after the fact, in	2	right
3	that you were not present during the spill?	3	MS. THORME: Right.
4	A It was conducted after the fact	4	MR. YOUNG: and things of that nature.
5	MS. THORME: Judge, I want to object, because	5	But are you a civil engineer?
6	he's not testifying personally. He is the mouthpiece	6	THE WITNESS: I'm a civil engineer, yes.
7	of the District, because the District as an entity,	7	MR. YOUNG: Okay. Do you have a background in
8	cannot testify. So she keeps asking, "you," "did you,	8	accounting?
9	so I just want it to be clear that he is not testifying	9	THE WITNESS: I do not, but I have been
10	as Mr. Yonker. He's testifying as a person most	10	actively involved with numerous special Districts. I
11	knowledgeable for the District.	11	do
12	MR. YOUNG: Okay.	12	MR. YOUNG: But with this District, are you
13	DR. WOLF: May I ask a question?	13	typically involved?
14	THE WITNESS: Sure.	14	THE WITNESS: I have not been as involved. I
15	DR. WOLF: Could you be a little more specific	15	have helped out a little bit with creating budgetary
16	than most knowledgeable	16	estimates for the fiscal year budgets. With other
17	MS. THORME: Okay	17	Districts, I have actually created fiscal year budgets.
18	DR. WOLF: I mean, his business card must	18	MR. YOUNG: And on an ongoing basis, what is
19	say something else.	19	your relationship with this District?
20	MS. THORME: An entity cannot testify. So you	20	THE WITNESS: I have been providing engineering
21	can't put the District in the witness seat, because the	21	services now for several years for this
22	District does not is not a person. It cannot talk.	22	THE REPORTER: Excuse me, but did you say
23	So on behalf of the District and this is normal in	23	"seven" or "several"?
24	legal cases when an entity has to speak you	24	THE WITNESS: I said several years, perhaps for
25	designate a person most knowledgeable. And they are	25	four years or so of many different types of work.

TRANSCRIPT OF HEARING

```
Primarily in design specifications for rehabilitation
                                                                1
                                                                          DR. WOLF: Yeah. The last one minute.
2
     repair of their capital improvement budget within the
                                                                 2
                                                                          THE WITNESS: Okay. Sorry.
                                                                3
 3
                                                                          DR. WOLF: Sorry, but I couldn't hear you.
     collections systems, as well as the treatment plants.
                                                                 4
     So I have become quite familiar with that facility
                                                                          THE WITNESS: I -- I have been -- assuming you
 5
     regarding the collection system, regarding the
                                                                 5
                                                                     heard everything else that I do for the District and my
 6
                                                                 6
                                                                     services, I have been very active in this spill since
     treatment plant.
 7
                                                                7
               And the facility, specific to this
                                                                     the very beginning. I was not there the day of the
8
     particular case, I have attended board meetings. I
                                                                8
                                                                     spill. I did receive a call that night with questions
9
                                                                9
                                                                     about what may be happening in the collection system,
     have made recommendations for staff reports. I do a
10
     coordination study for the District, coordinate with
                                                                10
                                                                     based upon my knowledge of the collection system. I
11
                                                                11
     the satellite agencies and train them on sewers
                                                                     have done a lot of work with the collection system.
12
     response collectively.
                                                                12
                                                                              And from that point on, I began being
13
                                                                13
                                                                     very involved with it. I helped author and perform the
               So I have been involved with this
14
                                                                     initial five-day report that was due January 3rd of
     District to the point where I'm comfortable. I'm
                                                                14
15
     knowledgeable. I'm not an administrator or the
                                                                15
                                                                     2011.
16
                                                                16
                                                                              I helped prepare the May 31st technical
     District engineer, but I do serve functions of those
17
                                                                17
     tasks.
                                                                     response to the State's investigative report of 2011.
18
           MR. YOUNG: And who do you report to,
                                                                18
                                                                     I have also attended numerous -- approximately seven or
19
     Mr. Wallace?
                                                                19
                                                                     eight meetings. I was there March 18th when
20
                                                                20
                                                                     Mr. Sarmiento and Mr. Fischer came down and did the
          THE WITNESS: I am employed by the Wallace
21
                                                                21
                                                                     initial investigations.
     Group.
22
                                                                22
           MR. YOUNG: And do you report to Mr. Wallace?
                                                                              So I have been fairly active in this
23
           THE WITNESS: I report to my direct manager.
                                                                23
                                                                     particular incident. In areas where I've been called
24
                                                                24
                                                                     upon to be the most competent for the District, I have
          MR. YOUNG: And who is that?
                                                                25
25
                                                                     gotten up to speed. I have read various --
           THE WITNESS: Mr. Zander (phonetic).
                                                                                                                    Page 512
                                                    Page 510
                                                                1
                                                                        MR. YOUNG: Well, the term is actually "most
1
          MR. YOUNG: Mr. --
2
                                                                2
                                                                    knowledgeable," not "most competent," to testify.
          THE WITNESS: Mr. Tom Zander. He works -- he's
                                                                        THE WITNESS: Most knowledgeable. My
3
     the principal of the Wallace Group.
                                                                3
4
                                                                4
          MR. YOUNG: Yeah. And so the information that
                                                                    apologies.
5
                                                                5
                                                                        MR. YOUNG: So --
     you're testifying to, is it coming collectively from
6
     different people within the District?
                                                                6
                                                                        DR. WOLF: I was quite impressed.
7
                                                                7
                                                                        THE WITNESS: Most knowledgeable, for this
          THE WITNESS: It is coming collectively. It
8
                                                                8
                                                                    particular hearing.
     has come from speaking with various operator people
9
                                                                9
                                                                        MR. YOUNG: Okay.
     that were there the day of the event. I received a
                                                                10
10
     call the day of the event to get information about the
                                                                    BY MS. MACEDO:
11
                                                                11
                                                                        Q Well, I will ask my questions, and if
     collection system where it may be spilling.
12
                                                                12
                                                                    there is any clarification about whether you can't
               I have been involved extensively with the
                                                                13
13
     State Operations Enforcement. I have been involved in
                                                                    answer it or whether you're answering it individually,
14
                                                                14
                                                                    I'm happy to have the distinction. I didn't realize
     nearly, if not all, correspondence back and forth
                                                                15
                                                                    that you could not testify as an individual.
15
     between the District. I spent time there for about
                                                                16
16
     seven or eight meetings as we tried to work out the
                                                                            You had a slide up where you had made
17
                                                                17
                                                                    notes that Mr. Appleton had provided, and you claimed
     situation. So I'm basically aware of this particular
                                                                18
18
     incident -- so --
                                                                    that there was some faulty time line, and that you were
19
                                                                    correcting it, and yet you just testified that you were
          DR. WOLF: Could you speak a little louder?
20
                                                                20
          MS. THORME: Yeah, you've got to keep that
                                                                    not on the site the day of the spill, and yet,
21
                                                                21
                                                                    Mr. Appleton was. And so I'm wondering what gave you
     microphone up.
22
                                                                22
                                                                    the authority to change the time line?
          DR. WOLF: I'm really having a hard time
23
                                                                23
                                                                        A Well, one of the differences I saw on the
     hearing you.
                                                                24
24
                                                                    time line was the time line that Mr. Fischer put up
          THE WITNESS: I'm sorry. I'm not used to
                                                                25
     speaking in a microphone. Should I repeat anything?
                                                                    there during his testimony -- it varied drastically
                                                    Page 511
                                                                                                                    Page 513
```

TRANSCRIPT OF HEARING

1	from what Mr. Appleton was saying as well.	1	A I have heard various statements. I can't
2	The District actually had a difficult	2	look at those numbers and say there are tables,
3	time with Mr. Appleton's investigations and timeline	3	which but they're both durational based, as well as
4	initially, because we tried to piece that together to	4	volume based. So a 24-hour duration in terms of that
5	create what had happened on-site. And we were finding	5	2.7, you know, that 2.7 might have peaked at 2:00 in
6	that was not the case on the site that day. We did an	6	the afternoon, and then been excessive until 3:00.
7	investigation on the power consumption records to see	7	That would be a 24-hour period that would need to be
8	when and where the pumps actually failed.	8	considered for that analysis, and I can't talk about
9	We investigated the alarm call outs. We	9	these numbers here.
10	spoke with people who were at that site and knew what	10	Q Okay. Do you agree that the five or so
11	time they arrived and it differed from what	11	inches does not rise to the level of one-hundred-year
12	Mr. Appleton had said what had happened. Initially, he	12	flood?
13	had reported to the State that the spill began at 9:30	13	A As far as I know, over that duration, I
14	or 10:00. It was initially it had to be resolved by	14	do not think that is a one-hundred-year flood.
15	the State, and there was some confusion there.	15	
16	So I understood there was some concern		
17		16	calculation factor slides, you described this as an act
18	may be that the spill started earlier, but this was	17	of God event. Do you know where you got that
	stuff that we pieced together slowly. And I still	18	terminology?
19	disagree with Mr. Appleton's time frame.	19	A Well, act of God in many ways. The
20	BY MS. MACEDO:	20	tree getting stuck in the flap gate. Washing its way
21	Q So that is clearly a response as a person	21	down to the headworks. Intruding the headworks and
22	most knowledgeable, since you weren't there on the day	22	shorting out of the pumps. The flood event that came
23	of	23	up, I would probably say a lot of these community
24	A It is a response of the person most	24	members would call this potentially an act of God
25	knowledgeable	25	event. This was a significant event is maybe
	Page 514		Page 516
1	THE DEDONTED. Fusion and	1	and a decrease at a state of the at the same
1	THE REPORTER: Excuse me	1	mischaracterizing that term.
2	THE WITNESS: and by others. And as far as	2	Q Okay. So you're describing it similar to
3	pulling the power consumption, once power consumption	3	any rainfall being an act of God, the way you're using
4	was reported, I can then analyze it and make that	4	the term?
5	decision. It's something I can believe in and I can	5	A I would not say so because this was a
6	trust.	6	very unique situation. As I mentioned previously in my
7	BY MS. MACEDO:	7	testimony, this was a large watershed. It rained the
8	Q Okay. In terms of the rain event, I	8	day prior. It just made its way down to the lagoon
9	would point you to your Exhibit 45. And this is an	9	while the new rain fell on top of it, and
10	exhibit that you provided. And on December 19th I	10	increased the situation the confluence there with
11	think we actually are not that far off. We submitted	11	the two together, it did not work right. There was
12	these rain totals, and I think they are very much in	12	substantial flooding. That was a situation more than a
13	line with yours. And yet when we got to the penalty	13	normal rainy Saturday.
14	calculator, you claim well, I will take it from	14	Q Is it your understanding that the
15	another angle.	15	District ever intentionally bypassed treatments during
16	Do you know what the permit requirements	16	December 19th or 20th?
17	requires the storm level to be protected against?	17	A Intentionally bypass treatment, yes. We
18	A I believe it's a hundred years	18	pumped
19	THE REPORTER: I'm sorry, you need to repeat	19	MR. JOHNSTON: Can you speak up, please?
20	THE WITNESS: It's a one-hundred-year-storm	20	THE WITNESS: I'm sorry.
21	event.	21	I guess, if you refer to the pumping
22	BY MS. MACEDO:	22	or the the temporary pumping from the headwork
23	Q Okay. And do you know what based on	23	structures to the beds
24	these rainfall totals, do you have an approximation of	24	BY MS. MACEDO:
25	what this worked out to be?	0.5	O Okaya
	what this worked out to be?	25	Q Okay.
	Page 515	25	Page 517

TRANSCRIPT OF HEARING

1	A that temporarily bypasses them.	1	rainfall totals you can see we have had those
2	Q Okay. Do you account for energy loss in	2	rainfall totals before, and we have not had that
3	your methods?	3	flooding issue in the past.
4	A Can you define "energy"?	4	MS. THORME: Okay. No further questions.
5	Q I'm not an engineer, so you are.	5	MR. YOUNG: Okay. Mr. Johnston?
6	Tell him what it is like, Matt.	6	MR. JOHNSTON: I have a couple of questions for
7	(Brief pause in proceedings.)	7	you.
8	BY MS. MACEDO:	8	You contradicted some of Mr. Appleton's
9	Q How much head was in the system?	9	testimony regarding his assertion that there had been
10	A We accounted for head in the system by	10	multiple discussions with the District regarding seals,
11	establishing hydraulic grade line.	11	and the lack of seals in that vault.
12	Q Okay. Where are your observations of the	12	And your statement was that you believe
13	grade?	13	that to be incorrect; is that right? Did I correctly
14	A We observed the grade in numerous	14	characterize that?
15	locations, primarily on the plant itself.	15	THE WITNESS: I am not sure if that is correct.
16	Q Okay.	16	MR. JOHNSTON: Okay. And so and let me just
17	A At two locations.	17	ask you, since you're and I understand you're
18	Q Where were those locations?	18	testifying as for the District, not as an
19	A We saw that occurring at the manhole,	19	individual.
20	which we monitored throughout the duration of the	20	Do you have any way of knowing as to
21	spill.	21	whether Mr. Appleton's testimony was correct or not?
22	Q I'm sorry, did you say the manhole?	22	THE WITNESS: Regarding his annual meetings
23	A There is a manhole which we use. I	23	with the Board of I'm sorry, with the Board of
24	believe it was GB2. It is where the physical pump was	24	Directors on-site
25	actually installed. And that is where we at one point	25	MR. JOHNSTON: He stated that in the period
	Page 518		Page 520
1	nulled off the manhale cover and we could see the	1	hotween 2004 and 2010, that he had brought up multiple
1 2	pulled off the manhole cover, and we could see the sewage within there. And we could see the grade, which	1 2	between 2004 and 2010, that he had brought up multiple
3	we were trying to catch up, because we were pumping at	3	times, the question of the seals. Yes, in those meetings.
4	a higher capacity that the sewer water was dropping	4	THE WITNESS: I cannot specifically state that
5	down.	5	that is the case, no.
6	MR. YOUNG: Ms. Macedo, your time is up.	6	MR. JOHNSTON: That you can't speak to the
7	MS. MACEDO: Okay. That's fine.	7	truth of the matter, one way or the other?
8	MR. YOUNG: Okay. Any redirect?	8	THE WITNESS: I guess it would be speculation.
9	MS. THORME: Just one question.	9	MR. JOHNSTON: Thank you.
10	Mo. Moral. Just one question.	10	The can I look at 49-2, for just a
11	REDIRECT EXAMINATION	11	minute?
12	BY MS. THORME:	12	MS. THORME: Which exhibit?
13	Q How much rain would it have taken to have	13	MR. JOHNSTON: 49-2.
14	one to two feet of flooding the way it was in the	14	MS. JAHR: 49-2.
15	Oceano area, if the flap gates hadn't been opened at	15	MR. JOHNSTON: Thank you.
16	one end and closed at the other?	16	Can you show me in the sewer treatment
17	A How much rain that is over that same	17	plant where the headworks is?
18	location?	18	THE WITNESS: Sure. What you have right here
19	Q Yes.	19	is the border of the treatment plant shown on this red
20	A I don't know I don't have my	20	line here (indicating).
21	calculator. I don't know. I don't know.	21	And you can just barely make out these
22	Q Okay. And has there been any similar	22	various facilities. These are the secondary treatment
23	rain events that haven't caused this flooding in the	23	portions.
24	past?	24	The headwork itself is right where this
25	A Yes, we have had many well, the	25	black line extends down, and this dash line comes
1			
	Page 519		Page 521

```
across. Those are two sewer lines that connect in the
                                                                1
                                                                     working on that, I will start explaining it to save
2
     headwork structure right there. So this is the flap
                                                                2
                                                                     time.
3
                                                                3
     gate water valve that I was talking about where the
                                                                              Again, this is -- oh, thank you.
                                                                4
     stick that had entered in and allowed that Arroyo
                                                                              This is the headworks structure here
5
     Grande Creek to flow backwards into the lagoon, cross
                                                                5
                                                                     (indicating). This is the blue portion, which
6
                                                                6
     the headworks structure and impact the structure right
                                                                     Mr. Johnston is referring to. And also this is the
7
                                                                7
     there. So it was more than just standard day ponding.
                                                                     flooded location around the headworks, which he is
8
     This is actually floodwater at a great depth.
                                                                8
                                                                     saying, how can those two things exist solely and not
9
          MR. JOHNSTON: Okay. So -- the reason I'm
                                                                9
                                                                     put together and not cause an issue.
10
     asking is because there was another -- I believe it was
                                                               10
                                                                              What you see here is a site drain. So
11
     45-1, I'm not sure. There was another graphic that
                                                               11
                                                                     this is a bermed up section. We are required to treat
12
     showed water ponding around the headworks -- maybe it's
                                                               12
                                                                     under our NPDS permit, to treat all storm water
13
     a different -- no, that's not it. It's the one before
                                                               13
                                                                     collection that comes on. So we do collect that storm
14
                                                               14
     that.
                                                                     water. Not to say, it's not -- that it is going to get
15
              Water ponded around the headworks, and --
                                                               15
                                                                     breached. It's clearly getting breached over here, and
16
     okay. Well, I don't know the number.
                                                                     it is getting breached over here.
                                                               16
17
          MS. JAHR: Is it the two pictures?
                                                               17
                                                                              But I guess my assumption would be that
18
          MR. JOHNSTON: It showed -- it showed in
                                                               18
                                                                     this water here is entering a drain system here.
19
     different colors, a small pool of water around the
                                                               19
                                                                     There's several drain systems throughout the system.
20
     headworks --
                                                               20
                                                                     And again, as I mentioned earlier, that is returned
21
          THE WITNESS: That's it.
                                                               21
                                                                     back to the headworks. So that is one possible
22
                                                               22
          MR. JOHNSTON: Thank you.
                                                                     scenario.
23
              When I look at that -- and the reason I'm
                                                               23
                                                                              I'm not saying that I can fully attest to
24
     asking this is because of the question that
                                                               24
                                                                     that, but that is what I would imagine would likely to
25
     Mr. Appleton raised about the sewage coming out of the
                                                               25
                                                                     have happened.
                                                    Page 522
                                                                                                                    Page 524
                                                                         MR. JOHNSTON: Okay. So can you show me the
     gate of the headworks --
                                                                1
2
          THE WITNESS: Yes.
                                                                2
                                                                     location of the berm?
3
                                                                         THE WITNESS: Yes, if it's in this drawing.
          MR. JOHNSTON: -- and there have been numerous
                                                                3
4
                                                                4
     questions on the part of the District's counsel, as to
                                                                         MR. YOUNG: He would need to --
5
     whether anybody established whether that sewage
                                                                5
                                                                         MS. THORME: Bigger.
6
     actually left the premises.
                                                                6
                                                                         THE WITNESS: I'm not sure if there is
7
                                                                7
          THE WITNESS: Okav.
                                                                     topography on this map or not. Some of them have it
8
          MR. JOHNSTON: And when I look at this diagram,
                                                                8
                                                                     and I could show that. I'm still having a hard time
9
                                                                9
     it seems to indicate that there is a pool around the
                                                                     seeing it. I do see lines here, and it's showing
10
     headworks, that is not connected to the light and dark
                                                               10
                                                                    various topography on the map on the system. But there
11
     blue pools on the left that is storm water flooding.
                                                               11
                                                                    is a curve here, and I'm sure there is an elevation
12
          THE WITNESS: That's correct.
                                                               12
                                                                     line, which I can't read from here, which would extend
13
                                                               13
          MR. JOHNSTON: Now, when we look at the 49.2 --
                                                                    down here.
14
     can we have 42.2 again?
                                                               14
                                                                         MR. JOHNSTON: Okay. But the headworks was
          MR. COLLIER: Yes.
15
                                                               15
                                                                    basically connected by surface floodwater to the rest
16
          MR. JOHNSTON: That seems to indicate that the
                                                               16
                                                                    of the flood, and your assumption is that even though
17
     headworks are in a flooded area, that is actually
                                                               17
                                                                    there was water flowing out of headworks, that it was
18
     physically connected to the whole rest of the flooded
                                                               18
                                                                     being pumped along with all the rest of the water, back
19
     area. Can you explain that discrepancy?
                                                               19
                                                                     in the headworks?
20
                                                               20
          THE WITNESS: Sure. Is there a way to possibly
                                                                         THE WITNESS: I would not make a statement that
21
     pull both of those pictures up at the same time?
                                                               21
                                                                    there was no wastewater that exited. I can't do that.
22
          MS. THORME: No, sorry.
                                                               22
                                                                    I can say that there is a storm drain there that does
23
          MS. MACEDO: You're asking for a lot now.
                                                               23
                                                                    accumulate that water back to the headworks. That is
24
          MR. HARRIS: She's good.
                                                               24
                                                                    what it is showing in this picture.
25
          THE WITNESS: Perhaps I can just -- as she's
                                                               25
                                                                             But you are correct, there is water
                                                    Page 523
                                                                                                                   Page 525
```

TRANSCRIPT OF HEARING

1	clearly passing from the Arroyo Grande Creek down to	1	THE WITNESS: I have asked it a different way.
2	that location and exasperating the flooding. So	2	I have asked where the funds come from to operate the
3	obviously it came from onsite offsite. I'm not sure	3	fund. I was told fund 19 is pure rates. And fund 20
4	if it is spilling on the plant or off the plant, or how	4	is funded through hook ups, and fund 26 is a transfer
5	it's happening, but it very likely.	5	from 19.
6	MR. JOHNSTON: Okay. And finally I'd like to	6	MR. JOHNSTON: Okay. And were you told fund 20
7	ask you a little bit about the financial statement that	7	is funded primarily through the hook up
8	we received, as part of your testimony.	8	THE WITNESS: I did not ask it with that
9	Now, can you explain the fund 20 is	9	specific terminology. But I assume that is the case,
10	labeled "expansion"?	10	but I can't
11	THE WITNESS: Yes.	11	MR. JOHNSTON: Thank you.
12	MR. JOHNSTON: Are you familiar with the	12	THE WITNESS: I didn't ask so.
13	funding and budgeting mechanisms of this particular	13	MR. JOHNSTON: I'm done.
14	District?	14	MR. YOUNG: Mr. Jordan.
15	THE WITNESS: I am probably not as experienced	15	MR. JORDAN: Thank you, Mr. Chair.
16	as I need to be, but I can certainly try to answer your	16	So staying on that same form between the
17	question. If you have a question specific about that,	17	time that counsel is handing it out and panicking about
18	I do know some.	18	her time, I've got even less than that probably.
19	MR. JOHNSTON: Okay. Well, my question is, is	19	So where on this form does it show
20	all of the money in fund 20, the result of collection	20	monthly revenues from your customers?
21	fees or is that intermingled with any other money?	21	THE WITNESS: This form is not showing what
22	THE WITNESS: There's	22	you're seeing here is if you go back to page one
23	MR. JOHNSTON: Is there discretionary money	23	if you're looking at page two, go back to page one,
24	that the Board has put in at one point or another for	24	please.
25	an expansion fund?	25	You will see an overall monthly summary,

THE WITNESS: So but that paragraph right there, you can see, it states where their incomes are coming from on a monthly MR. JORDAN: So is this \$276,000 represented in multiple numbers in that fund 19?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	see fund 19 operating on fund 20 expansion and fund 26 replacement. That fund 19 operating fund is established and funded primarily from rates. Those are the collection the sewer rates, that occur on a monthly basis. Fund 20 is funded primarily from hook-ups. So in other words, if a new home hooks up to that and pays the connection fee, that is what funds that fund. MR. JOHNSTON: What are the other sources of funding for fund 20? THE WITNESS: As far as I know, that is a hook-up fund only. MR. JOHNSTON: Can you state that with certainty? THE WITNESS: I can state that that is what I	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	July, the District received payments for June's sewer services that would be fund 19, in a total amount of there is a dollar amount there from each of the various member agencies, the City of Arroyo Grande, the City of Grover Beach, and the CSD. There was a \$2,475 fund 20 connection fee in Arroyo Grande for the month of June. For the month of July, \$1,877 that was earned for the THE REPORTER: Excuse me, could you speak up more? THE WITNESS: So but that paragraph right there, you can see, it states where their incomes are coming from on a monthly MR. JORDAN: So is this \$276,000 represented in multiple numbers in that fund 19? THE WITNESS: Um, as I understand it, this is a
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	see fund 19 operating on fund 20 expansion and fund 26 replacement. That fund 19 operating fund is established and funded primarily from rates. Those are the collection the sewer rates, that occur on a monthly basis. Fund 20 is funded primarily from hook-ups. So in other words, if a new home hooks up to that and pays the connection fee, that is what funds that fund. MR. JOHNSTON: What are the other sources of funding for fund 20? THE WITNESS: As far as I know, that is a hook-up fund only. MR. JOHNSTON: Can you state that with certainty? THE WITNESS: I can state that that is what I believe with certainty. I can't say that is correct,	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	July, the District received payments for June's sewer services that would be fund 19, in a total amount of there is a dollar amount there from each of the various member agencies, the City of Arroyo Grande, the City of Grover Beach, and the CSD. There was a \$2,475 fund 20 connection fee in Arroyo Grande for the month of June. For the month of July, \$1,877 that was earned for the THE REPORTER: Excuse me, could you speak up more? THE WITNESS: So but that paragraph right there, you can see, it states where their incomes are coming from on a monthly MR. JORDAN: So is this \$276,000 represented in multiple numbers in that fund 19? THE WITNESS: Um, as I understand it, this is a cash balance statement at the time, and these funds are
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	see fund 19 operating on fund 20 expansion and fund 26 replacement. That fund 19 operating fund is established and funded primarily from rates. Those are the collection the sewer rates, that occur on a monthly basis. Fund 20 is funded primarily from hook-ups. So in other words, if a new home hooks up to that and pays the connection fee, that is what funds that fund. MR. JOHNSTON: What are the other sources of funding for fund 20? THE WITNESS: As far as I know, that is a hook-up fund only. MR. JOHNSTON: Can you state that with certainty? THE WITNESS: I can state that that is what I believe with certainty. I can't say that is correct, but I believe that is the case. But I guess with	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	July, the District received payments for June's sewer services that would be fund 19, in a total amount of there is a dollar amount there from each of the various member agencies, the City of Arroyo Grande, the City of Grover Beach, and the CSD. There was a \$2,475 fund 20 connection fee in Arroyo Grande for the month of June. For the month of July, \$1,877 that was earned for the THE REPORTER: Excuse me, could you speak up more? THE WITNESS: So but that paragraph right there, you can see, it states where their incomes are coming from on a monthly MR. JORDAN: So is this \$276,000 represented in multiple numbers in that fund 19? THE WITNESS: Um, as I understand it, this is a cash balance statement at the time, and these funds are put into that to represent that current balance.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	see fund 19 operating on fund 20 expansion and fund 26 replacement. That fund 19 operating fund is established and funded primarily from rates. Those are the collection the sewer rates, that occur on a monthly basis. Fund 20 is funded primarily from hook-ups. So in other words, if a new home hooks up to that and pays the connection fee, that is what funds that fund. MR. JOHNSTON: What are the other sources of funding for fund 20? THE WITNESS: As far as I know, that is a hook-up fund only. MR. JOHNSTON: Can you state that with certainty? THE WITNESS: I can state that that is what I believe with certainty. I can't say that is correct, but I believe that is the case. But I guess with ultimate certainty, then I would say, no. That is what	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	July, the District received payments for June's sewer services that would be fund 19, in a total amount of there is a dollar amount there from each of the various member agencies, the City of Arroyo Grande, the City of Grover Beach, and the CSD. There was a \$2,475 fund 20 connection fee in Arroyo Grande for the month of June. For the month of July, \$1,877 that was earned for the THE REPORTER: Excuse me, could you speak up more? THE WITNESS: So but that paragraph right there, you can see, it states where their incomes are coming from on a monthly MR. JORDAN: So is this \$276,000 represented in multiple numbers in that fund 19? THE WITNESS: Um, as I understand it, this is a cash balance statement at the time, and these funds are put into that to represent that current balance. MR. JORDAN: Okay. And in fund 20, what is
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	see fund 19 operating on fund 20 expansion and fund 26 replacement. That fund 19 operating fund is established and funded primarily from rates. Those are the collection the sewer rates, that occur on a monthly basis. Fund 20 is funded primarily from hook-ups. So in other words, if a new home hooks up to that and pays the connection fee, that is what funds that fund. MR. JOHNSTON: What are the other sources of funding for fund 20? THE WITNESS: As far as I know, that is a hook-up fund only. MR. JOHNSTON: Can you state that with certainty? THE WITNESS: I can state that that is what I believe with certainty. I can't say that is correct, but I believe that is the case. But I guess with ultimate certainty, then I would say, no. That is what I'm led to believe about fund 20, it's hook up for	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	July, the District received payments for June's sewer services that would be fund 19, in a total amount of there is a dollar amount there from each of the various member agencies, the City of Arroyo Grande, the City of Grover Beach, and the CSD. There was a \$2,475 fund 20 connection fee in Arroyo Grande for the month of June. For the month of July, \$1,877 that was earned for the THE REPORTER: Excuse me, could you speak up more? THE WITNESS: So but that paragraph right there, you can see, it states where their incomes are coming from on a monthly MR. JORDAN: So is this \$276,000 represented in multiple numbers in that fund 19? THE WITNESS: Um, as I understand it, this is a cash balance statement at the time, and these funds are put into that to represent that current balance. MR. JORDAN: Okay. And in fund 20, what is that money used for?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	see fund 19 operating on fund 20 expansion and fund 26 replacement. That fund 19 operating fund is established and funded primarily from rates. Those are the collection the sewer rates, that occur on a monthly basis. Fund 20 is funded primarily from hook-ups. So in other words, if a new home hooks up to that and pays the connection fee, that is what funds that fund. MR. JOHNSTON: What are the other sources of funding for fund 20? THE WITNESS: As far as I know, that is a hook-up fund only. MR. JOHNSTON: Can you state that with certainty? THE WITNESS: I can state that that is what I believe with certainty. I can't say that is correct, but I believe that is the case. But I guess with ultimate certainty, then I would say, no. That is what I'm led to believe about fund 20, it's hook up for MR. JOHNSTON: You've asked the question in	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	July, the District received payments for June's sewer services that would be fund 19, in a total amount of there is a dollar amount there from each of the various member agencies, the City of Arroyo Grande, the City of Grover Beach, and the CSD. There was a \$2,475 fund 20 connection fee in Arroyo Grande for the month of June. For the month of July, \$1,877 that was earned for the THE REPORTER: Excuse me, could you speak up more? THE WITNESS: So but that paragraph right there, you can see, it states where their incomes are coming from on a monthly MR. TRANSCRIPT OF HEARING

		1	
1	MR. JORDAN: The capital projects?	1	it's a valve
2	THE WITNESS: Exactly.	2	MR. JORDAN: It's a valve.
3	MR. JORDAN: Okay.	3	THE WITNESS: and no, I did not do that.
4	THE WITNESS: So that would be secondary	4	MR. JORDAN: Okay. But was it somebody in the
5	treatment processes, the new centrifuge, that was just	5	Wallace Group that did it?
6	recently purchased. The chlorine contact tank, which	6	THE WITNESS: If I remember correctly, it
7	we built a few years ago.	7	looked like it was written by Bob
8	MR. JORDAN: And you're not in any position to	8	THE REPORTER: I'm sorry
9	provide a list with an itemized budget of what those	9	THE WITNESS: He's
10	projects would be?	10	THE REPORTER: excuse me, what was the name
11	THE WITNESS: I'm sorry	11	you said?
12	MS. THORME: That was an exhibit, and the	12	THE WITNESS: Bob.
13	budget is in an exhibit.	13	MS. MACEDO: Bob.
14	MR. JORDAN: For what years?	14	THE WITNESS: Bob Barlogio. I think it's
15	MS. THORME: For 2012.	15	B-a-r-l-o-g-i-o. He is the chief operator.
16	MR. JORDAN: Okay. You better help me with	16	I think he maybe I'm getting the order
17	that exhibit number, if you can.	17	wrong, but it's prepared by and reviewed by or approved
18	MS. THORME: It's Exhibit 36, is the adopted	18	by, so it was done by the operator.
19	2012-2013 budget.	19	MR. JORDAN: And then the same type of question
20	MR. JORDAN: Okay. Thank you.	20	on the pumps. On the purchase of the pump that for
21	And do you know then, if that designation	21	a period of time it is either unknown or unrealized,
22	of those use of funds, either in the next years' budget	22	that it's only going to run for an hour, and then it
23	or in any future years projected in the capital	23	terminates. Who does that, and how does that happen?
24	projects, can be modified or changed by the District	24	THE WITNESS: Well, we're restricted I will
25	directors?	25	go into a little detail to kind of help you with
	Page 530		Page 532
			<u> </u>
1	THE WITNESS: As I understand it, projects that	1	this we're restricted from operating that pump for
1 2	THE WITNESS: As I understand it, projects that have carry-over budgets or have had carried budgets	1 2	this we're restricted from operating that pump for an extended period of time probably by our APCD permit.
		1	
2	have carry-over budgets or have had carried budgets	2	an extended period of time probably by our APCD permit.
2	have carry-over budgets or have had carried budgets over in the following year, if not extended, I think	2 3	an extended period of time probably by our APCD permit. But it restricts us from putting particulates
2 3 4	have carry-over budgets or have had carried budgets over in the following year, if not extended, I think they can be changed. But it can only	2 3 4	an extended period of time probably by our APCD permit. But it restricts us from putting particulates (phonetic) in the air.
2 3 4 5	have carry-over budgets or have had carried budgets over in the following year, if not extended, I think they can be changed. But it can only MR. JORDAN: And it's if they have a specific	2 3 4 5	an extended period of time probably by our APCD permit. But it restricts us from putting particulates (phonetic) in the air. But primarily more so from running that pump that low, because we just can't produce those types of flow. We would have to shut down the
2 3 4 5 6	have carry-over budgets or have had carried budgets over in the following year, if not extended, I think they can be changed. But it can only MR. JORDAN: And it's if they have a specific list of items, then you designated specific items for a	2 3 4 5 6	an extended period of time probably by our APCD permit. But it restricts us from putting particulates (phonetic) in the air. But primarily more so from running that pump that low, because we just can't produce those types of flow. We would have to shut down the wastewater treatment plant to produce those surcharge
2 3 4 5 6 7 8	have carry-over budgets or have had carried budgets over in the following year, if not extended, I think they can be changed. But it can only MR. JORDAN: And it's if they have a specific list of items, then you designated specific items for a specific price that are going to be accomplished in the next year, or the prior year after THE WITNESS: Yeah.	2 3 4 5 6 7 8	an extended period of time probably by our APCD permit. But it restricts us from putting particulates (phonetic) in the air. But primarily more so from running that pump that low, because we just can't produce those types of flow. We would have to shut down the wastewater treatment plant to produce those surcharge lows. We just can't get 10 MGD's so that is not a pump
2 3 4 5 6 7 8 9	have carry-over budgets or have had carried budgets over in the following year, if not extended, I think they can be changed. But it can only MR. JORDAN: And it's if they have a specific list of items, then you designated specific items for a specific price that are going to be accomplished in the next year, or the prior year after THE WITNESS: Yeah. MR. JORDAN: and then represented by this 4	2 3 4 5 6 7 8 9	an extended period of time probably by our APCD permit. But it restricts us from putting particulates (phonetic) in the air. But primarily more so from running that pump that low, because we just can't produce those types of flow. We would have to shut down the wastewater treatment plant to produce those surcharge lows. We just can't get 10 MGD's so that is not a pump that we have run for an extended period of time.
2 3 4 5 6 7 8 9 10	have carry-over budgets or have had carried budgets over in the following year, if not extended, I think they can be changed. But it can only MR. JORDAN: And it's if they have a specific list of items, then you designated specific items for a specific price that are going to be accomplished in the next year, or the prior year after THE WITNESS: Yeah. MR. JORDAN: and then represented by this 4 million some dollars there, can those actions be	2 3 4 5 6 7 8 9 10	an extended period of time probably by our APCD permit. But it restricts us from putting particulates (phonetic) in the air. But primarily more so from running that pump that low, because we just can't produce those types of flow. We would have to shut down the wastewater treatment plant to produce those surcharge lows. We just can't get 10 MGD's so that is not a pump that we have run for an extended period of time. When we turn it on, it pulls water so the
2 3 4 5 6 7 8 9 10 11	have carry-over budgets or have had carried budgets over in the following year, if not extended, I think they can be changed. But it can only MR. JORDAN: And it's if they have a specific list of items, then you designated specific items for a specific price that are going to be accomplished in the next year, or the prior year after THE WITNESS: Yeah. MR. JORDAN: and then represented by this 4 million some dollars there, can those actions be changed by your District Board?	2 3 4 5 6 7 8 9 10 11	an extended period of time probably by our APCD permit. But it restricts us from putting particulates (phonetic) in the air. But primarily more so from running that pump that low, because we just can't produce those types of flow. We would have to shut down the wastewater treatment plant to produce those surcharge lows. We just can't get 10 MGD's so that is not a pump that we have run for an extended period of time. When we turn it on, it pulls water so the one hour duration, I think, we just have never exceeded
2 3 4 5 6 7 8 9 10 11 12 13	have carry-over budgets or have had carried budgets over in the following year, if not extended, I think they can be changed. But it can only MR. JORDAN: And it's if they have a specific list of items, then you designated specific items for a specific price that are going to be accomplished in the next year, or the prior year after THE WITNESS: Yeah. MR. JORDAN: and then represented by this 4 million some dollars there, can those actions be changed by your District Board? THE WITNESS: Well, I understand that they can.	2 3 4 5 6 7 8 9 10 11 12	an extended period of time probably by our APCD permit. But it restricts us from putting particulates (phonetic) in the air. But primarily more so from running that pump that low, because we just can't produce those types of flow. We would have to shut down the wastewater treatment plant to produce those surcharge lows. We just can't get 10 MGD's so that is not a pump that we have run for an extended period of time. When we turn it on, it pulls water so the one hour duration, I think, we just have never exceeded it. It's never been in a situation where we need to
2 3 4 5 6 7 8 9 10 11 12 13 14	have carry-over budgets or have had carried budgets over in the following year, if not extended, I think they can be changed. But it can only MR. JORDAN: And it's if they have a specific list of items, then you designated specific items for a specific price that are going to be accomplished in the next year, or the prior year after THE WITNESS: Yeah. MR. JORDAN: and then represented by this 4 million some dollars there, can those actions be changed by your District Board? THE WITNESS: Well, I understand that they can. We do a five year look out on the projects, and we	2 3 4 5 6 7 8 9 10 11	an extended period of time probably by our APCD permit. But it restricts us from putting particulates (phonetic) in the air. But primarily more so from running that pump that low, because we just can't produce those types of flow. We would have to shut down the wastewater treatment plant to produce those surcharge lows. We just can't get 10 MGD's so that is not a pump that we have run for an extended period of time. When we turn it on, it pulls water so the one hour duration, I think, we just have never exceeded it. It's never been in a situation where we need to for temporary projects where we bypass temporarily.
2 3 4 5 6 7 8 9 10 11 12 13 14 15	have carry-over budgets or have had carried budgets over in the following year, if not extended, I think they can be changed. But it can only MR. TRANSCRIPT OF HEARING

1	MR. JORDAN: Are the air quality control	1	DR. WOLF: And if you're not sure, you can
2	issues, are those in place in an emergency like this or	2	always
3	just in normal times?	3	THE WITNESS: That may very well be. Speaking
4	THE WITNESS: We're restricted each permit	4	from experience, knowing that from different wastewater
5	in the facility is restricted to different lengths of	5	treatment plants, I have seen different durations of
6	time. There are different requirements for each of the	6	time for different generators.
7	diesel powered engines for back up or generators or	7	DR. WOLF: You
8	whatever it may be and	8	THE WITNESS: I'm not sure. It falls within
9	MR. JORDAN: Regardless of what is going on in	9	that, but that seems to be logical.
10	the ground?	10	DR. WOLF: I think that is the industry saying.
11	THE WITNESS: It	11	Since you have been quite a bit involved
12	MR. JORDAN: I mean, if all your other pumps	12	in helping the District in their compliance, both in
13	have failed	13	terms of permitting and help you bring from your
14	THE WITNESS: I would	14	introduction, the best management practices to the
15	MR. JORDAN: at your facility?	15	facility, have you had in your last four years of
16	THE WITNESS: I would imagine that they may	16	experience, any observation, in terms of some
17	offer some kind of variance to that, if you are	17	enhancements to prevent maintenance program that could
18	experiencing an emergency. They do well, for this	18	be performed, both mechanical and electrical, or
19	instance, we did run it for pretty good amount of time.	19	everything was satisfactory to your observation?
20	The permit is renewed annually. You must	20	THE WITNESS: Preventative maintenance?
21	maintain meter readings for hourly usage times. Charts	21	DR. WOLF: Yes.
22	available for them to inspect.	22	THE WITNESS: We just recently updated the
23	I would assume I would only assume	23	operation for maintenance for the plant, which I
24	that it would have to be regulatory for them to	24	participated in in rewriting some of those portions of
25	understand there would be times of emergency.	25	the treatment plant processes. The District maintains

	AND TORDANI OL TILL		
1	MR. JORDAN: Okay. Thank you.	1	a hock (phonetic) plus system for preventative
1 2	MR. JORDAN: Okay. Thank you. THE WITNESS: Sure.	1 2	a hock (phonetic) plus system for preventative maintenance. And it's very good system, in my opinion,
2	THE WITNESS: Sure.	2	maintenance. And it's very good system, in my opinion,
2	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump.	2 3	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did
2 3 4	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this	2 3 4	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there.
2 3 4 5	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump.	2 3 4 5	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was
2 3 4 5 6	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump. isn't it true that this APCD does provide provisions for testing standby generators and that the provisions for a water treatment plant are the same for	2 3 4 5 6	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there.
2 3 4 5 6 7	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump. isn't it true that this APCD does provide provisions for testing standby generators and that the	2 3 4 5 6 7 8	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there. DR. WOLF: And how long ago was this program established? THE WITNESS: They have been running that
2 3 4 5 6 7 8	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump. isn't it true that this APCD does provide provisions for testing standby generators and that the provisions for a water treatment plant are the same for	2 3 4 5 6 7 8	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there. DR. WOLF: And how long ago was this program established?
2 3 4 5 6 7 8 9 10	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump. isn't it true that this APCD does provide provisions for testing standby generators and that the provisions for a water treatment plant are the same for health care facilities for legal report standby systems? THE WITNESS: As far as I know, this permit	2 3 4 5 6 7 8 9 10	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there. DR. WOLF: And how long ago was this program established? THE WITNESS: They have been running that program for several years now, as far as I know. The manual was updated, I think, two years ago.
2 3 4 5 6 7 8 9	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump. isn't it true that this APCD does provide provisions for testing standby generators and that the provisions for a water treatment plant are the same for health care facilities for legal report standby systems?	2 3 4 5 6 7 8 9	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there. DR. WOLF: And how long ago was this program established? THE WITNESS: They have been running that program for several years now, as far as I know. The
2 3 4 5 6 7 8 9 10 11 12 13	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump. isn't it true that this APCD does provide provisions for testing standby generators and that the provisions for a water treatment plant are the same for health care facilities for legal report standby systems? THE WITNESS: As far as I know, this permit does have an hourly usage on an annual basis, which you can test and make sure that it starts, it operates and	2 3 4 5 6 7 8 9 10 11 12 13	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there. DR. WOLF: And how long ago was this program established? THE WITNESS: They have been running that program for several years now, as far as I know. The manual was updated, I think, two years ago.
2 3 4 5 6 7 8 9 10 11 12 13 14	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump. isn't it true that this APCD does provide provisions for testing standby generators and that the provisions for a water treatment plant are the same for health care facilities for legal report standby systems? THE WITNESS: As far as I know, this permit does have an hourly usage on an annual basis, which you can test and make sure that it starts, it operates and is ready to go when it is called upon.	2 3 4 5 6 7 8 9 10 11	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there. DR. WOLF: And how long ago was this program established? THE WITNESS: They have been running that program for several years now, as far as I know. The manual was updated, I think, two years ago. DR. WOLF: All right. So that was back in
2 3 4 5 6 7 8 9 10 11 12 13 14 15	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump. isn't it true that this APCD does provide provisions for testing standby generators and that the provisions for a water treatment plant are the same for health care facilities for legal report standby systems? THE WITNESS: As far as I know, this permit does have an hourly usage on an annual basis, which you can test and make sure that it starts, it operates and is ready to go when it is called upon. DR. WOLF: And isn't it true that the	2 3 4 5 6 7 8 9 10 11 12 13	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there. DR. WOLF: And how long ago was this program established? THE WITNESS: They have been running that program for several years now, as far as I know. The manual was updated, I think, two years ago. DR. WOLF: All right. So that was back in around 2010? THE WITNESS: I would say that is probably right.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump. isn't it true that this APCD does provide provisions for testing standby generators and that the provisions for a water treatment plant are the same for health care facilities for legal report standby systems? THE WITNESS: As far as I know, this permit does have an hourly usage on an annual basis, which you can test and make sure that it starts, it operates and is ready to go when it is called upon. DR. WOLF: And isn't it true that the calculation from APCD for the county are 30 minutes per	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there. DR. WOLF: And how long ago was this program established? THE WITNESS: They have been running that program for several years now, as far as I know. The manual was updated, I think, two years ago. DR. WOLF: All right. So that was back inaround 2010? THE WITNESS: I would say that is probably right. DR. WOLF: Okay. In the testimony done by the
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump. isn't it true that this APCD does provide provisions for testing standby generators and that the provisions for a water treatment plant are the same for health care facilities for legal report standby systems? THE WITNESS: As far as I know, this permit does have an hourly usage on an annual basis, which you can test and make sure that it starts, it operates and is ready to go when it is called upon. DR. WOLF: And isn't it true that the	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there. DR. WOLF: And how long ago was this program established? THE WITNESS: They have been running that program for several years now, as far as I know. The manual was updated, I think, two years ago. DR. WOLF: All right. So that was back inaround 2010? THE WITNESS: I would say that is probably right. DR. WOLF: Okay. In the testimony done by the electrical expert for the District this morning,
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump. isn't it true that this APCD does provide provisions for testing standby generators and that the provisions for a water treatment plant are the same for health care facilities for legal report standby systems? THE WITNESS: As far as I know, this permit does have an hourly usage on an annual basis, which you can test and make sure that it starts, it operates and is ready to go when it is called upon. DR. WOLF: And isn't it true that the calculation from APCD for the county are 30 minutes per month of operation? THE WITNESS: I believe that is the case with	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there. DR. WOLF: And how long ago was this program established? THE WITNESS: They have been running that program for several years now, as far as I know. The manual was updated, I think, two years ago. DR. WOLF: All right. So that was back in around 2010? THE WITNESS: I would say that is probably right. DR. WOLF: Okay. In the testimony done by the electrical expert for the District this morning, Mr. Thoma, Thoma Electric
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump. isn't it true that this APCD does provide provisions for testing standby generators and that the provisions for a water treatment plant are the same for health care facilities for legal report standby systems? THE WITNESS: As far as I know, this permit does have an hourly usage on an annual basis, which you can test and make sure that it starts, it operates and is ready to go when it is called upon. DR. WOLF: And isn't it true that the calculation from APCD for the county are 30 minutes per month of operation? THE WITNESS: I believe that is the case with this 30 minutes no, I don't think that is the case	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there. DR. WOLF: And how long ago was this program established? THE WITNESS: They have been running that program for several years now, as far as I know. The manual was updated, I think, two years ago. DR. WOLF: All right. So that was back inaround 2010? THE WITNESS: I would say that is probably right. DR. WOLF: Okay. In the testimony done by the electrical expert for the District this morning, Mr. Thoma, Thoma Electric THE WITNESS: Uh-huh.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump. isn't it true that this APCD does provide provisions for testing standby generators and that the provisions for a water treatment plant are the same for health care facilities for legal report standby systems? THE WITNESS: As far as I know, this permit does have an hourly usage on an annual basis, which you can test and make sure that it starts, it operates and is ready to go when it is called upon. DR. WOLF: And isn't it true that the calculation from APCD for the county are 30 minutes per month of operation? THE WITNESS: I believe that is the case with this 30 minutes no, I don't think that is the case with this permit.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there. DR. WOLF: And how long ago was this program established? THE WITNESS: They have been running that program for several years now, as far as I know. The manual was updated, I think, two years ago. DR. WOLF: All right. So that was back inaround 2010? THE WITNESS: I would say that is probably right. DR. WOLF: Okay. In the testimony done by the electrical expert for the District this morning, Mr. Thoma, Thoma Electric THE WITNESS: Uh-huh. DR. WOLF: there seems to be a contradiction
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump. isn't it true that this APCD does provide provisions for testing standby generators and that the provisions for a water treatment plant are the same for health care facilities for legal report standby systems? THE WITNESS: As far as I know, this permit does have an hourly usage on an annual basis, which you can test and make sure that it starts, it operates and is ready to go when it is called upon. DR. WOLF: And isn't it true that the calculation from APCD for the county are 30 minutes per month of operation? THE WITNESS: I believe that is the case with this 30 minutes no, I don't think that is the case with this permit. DR. WOLF: But let me rephrase that.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there. DR. WOLF: And how long ago was this program established? THE WITNESS: They have been running that program for several years now, as far as I know. The manual was updated, I think, two years ago. DR. WOLF: All right. So that was back inaround 2010? THE WITNESS: I would say that is probably right. DR. WOLF: Okay. In the testimony done by the electrical expert for the District this morning, Mr. Thoma, Thoma Electric THE WITNESS: Uh-huh. DR. WOLF: there seems to be a contradiction between his statement, that it was a miscoordination
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump. isn't it true that this APCD does provide provisions for testing standby generators and that the provisions for a water treatment plant are the same for health care facilities for legal report standby systems? THE WITNESS: As far as I know, this permit does have an hourly usage on an annual basis, which you can test and make sure that it starts, it operates and is ready to go when it is called upon. DR. WOLF: And isn't it true that the calculation from APCD for the county are 30 minutes per month of operation? THE WITNESS: I believe that is the case with this 30 minutes no, I don't think that is the case with this permit. DR. WOLF: But let me rephrase that. The accumulative usage is six hours per	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there. DR. WOLF: And how long ago was this program established? THE WITNESS: They have been running that program for several years now, as far as I know. The manual was updated, I think, two years ago. DR. WOLF: All right. So that was back inaround 2010? THE WITNESS: I would say that is probably right. DR. WOLF: Okay. In the testimony done by the electrical expert for the District this morning, Mr. Thoma, Thoma Electric THE WITNESS: Uh-huh. DR. WOLF: there seems to be a contradiction between his statement, that it was a miscoordination problem with certain breakers, and we had a little
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump. isn't it true that this APCD does provide provisions for testing standby generators and that the provisions for a water treatment plant are the same for health care facilities for legal report standby systems? THE WITNESS: As far as I know, this permit does have an hourly usage on an annual basis, which you can test and make sure that it starts, it operates and is ready to go when it is called upon. DR. WOLF: And isn't it true that the calculation from APCD for the county are 30 minutes per month of operation? THE WITNESS: I believe that is the case with this 30 minutes no, I don't think that is the case with this permit. DR. WOLF: But let me rephrase that. The accumulative usage is six hours per year. So you can that is your budget, so you can	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there. DR. WOLF: And how long ago was this program established? THE WITNESS: They have been running that program for several years now, as far as I know. The manual was updated, I think, two years ago. DR. WOLF: All right. So that was back in around 2010? THE WITNESS: I would say that is probably right. DR. WOLF: Okay. In the testimony done by the electrical expert for the District this morning, Mr. Thoma, Thoma Electric THE WITNESS: Uh-huh. DR. WOLF: there seems to be a contradiction between his statement, that it was a miscoordination problem with certain breakers, and we had a little technical exchange on that topic.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	THE WITNESS: Sure. MR. YOUNG: Dr. Wolf? DR. WOLF: I will kind of continue on this question that was made about this particular pump. isn't it true that this APCD does provide provisions for testing standby generators and that the provisions for a water treatment plant are the same for health care facilities for legal report standby systems? THE WITNESS: As far as I know, this permit does have an hourly usage on an annual basis, which you can test and make sure that it starts, it operates and is ready to go when it is called upon. DR. WOLF: And isn't it true that the calculation from APCD for the county are 30 minutes per month of operation? THE WITNESS: I believe that is the case with this 30 minutes no, I don't think that is the case with this permit. DR. WOLF: But let me rephrase that. The accumulative usage is six hours per year. So you can that is your budget, so you can run it one hour every two months, 30 minutes?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	maintenance. And it's very good system, in my opinion, which both cards remind you via e-mail. And I did write specifically about those portions about that, but I was not involved in establishing that. It was probably done by the chief operator out there. DR. WOLF: And how long ago was this program established? TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

```
the shunt trip was the issue. Yet based on the
                                                                1
                                                                          THE WITNESS: Okay.
2
     coordination study that was performed, the results had
                                                                2
                                                                          DR. WOLF: And that it was a piece of equipment
                                                                3
     indicated the fact that there were some miscoordination
                                                                     that was purchased basically, that really was not
4
     between the breakers. Do you have any comment about
                                                                4
                                                                     necessary, but you had the foresight -- that is the
5
                                                                5
                                                                     term, I think that I was --
     this?
6
                                                                6
          THE WITNESS: As far as I know -- as far as I
                                                                         THE WITNESS: The foresight.
7
                                                                7
     know, you're correct. There is still, I believe --
                                                                         DR. WOLF: The foresight.
8
     there remain some issues with the coordination between
                                                                8
                                                                          THE WITNESS: Yes.
9
     the breakers, particularly that of the upper 400 Amp
                                                                9
                                                                          DR. WOLF: Now, from your extensive experience,
10
     (phonetic). I can't remember.
                                                               10
                                                                     isn't it correct that these types of backup pumps are
11
                                                               11
              But what we have done, is this was
                                                                     actually pretty common in the industry, considering
12
     determined to be a shunt trip issue -- and I will come
                                                               12
                                                                     that the City of Pismo, your neighbor, had that same
13
     back to the breaker -- and that was determined in
                                                               13
                                                                     identical piece of equipment?
14
                                                               14
     October of 2011 when a similar event happened, even
                                                                          THE WITNESS: Well, it is a very good
                                                               15
15
     though we created that air gap that Mr. Thoma testified
                                                                     statement, and to that, I would have to say the City of
                                                               16
16
     about, and the water still migrated down and the hit
                                                                     Pismo did not provide us with the same piece of
17
                                                               17
                                                                     equipment. The City of Pismo provided us with a backup
     shunt tripped it, and they were able to institute the
18
                                                               18
     emergency backup pump.
                                                                     pump. But not necessarily a backup pump, which would
19
              And what we did there is we created
                                                               19
                                                                     accommodate the headworks structure, and accommodate
20
                                                               20
                                                                     those flows that which we experience and in that range.
     actually two shunt trips so to not actually cut off all
                                                               21
     breakers and cut off two motors at a time. So if one
                                                                             It -- the reason I said that the industry
22
                                                               22
     were to trip, you still have two motors. This does not
                                                                     has the foresight to purchase that is because I'm not
23
                                                               23
     require four motors to run. Of course, the motors are
                                                                     familiar with too many treatment plants that have that.
24
                                                               24
                                                                             Treatment plants do have auxiliary pumps
     equipped to run independently.
25
                                                               25
              The breakers, yes, I did hear Mr. Thoma
                                                                     for various reasons. Pumping down, as I understand,
                                                                                                                    Page 540
                                                    Page 538
     state that there were some issues. I heard him speak
                                                                1
                                                                     clarifiers to elevated structures, the tanks, many
2
     out of my knowledge range, but it sounded like you
                                                                     portions of the wastewater treatment plant are tanks
3
     understood that there was some hard fuse issues, and I
                                                                3
                                                                     that can be drained out with wet pumps (phonetic). The
4
     thought he referred to you understanding the complexity
                                                                4
                                                                     kind of drain that goes out with trap pumps that do all
5
     of trying to work out those issues.
                                                                5
                                                                     those different operations. A backup pump is certainly
6
          DR. WOLF: Okay.
                                                                6
                                                                     a good thing to have. It comes in handy.
7
                                                                7
          THE WITNESS: And I was not sure if it was
                                                                             The reference I was making is that the
8
                                                                8
                                                                     District had the foresight to purchase one that would
     something that needed to be done, or if it was
9
                                                                9
                                                                     actually accommodate and replace the headworks
     something that was more difficult to do than necessary.
10
     I was not sure from that conversation.
                                                               10
                                                                     structure should it need to be replaced.
11
                                                               11
                                                                          DR. WOLF: Okay. Thank you. The last question
          DR. WOLF: When the District required the
12
                                                               12
                                                                     is, how many acres is the facility?
     diesel powered emergency pump, it was mentioned, I
                                                               13
13
     think by you, that this was a -- I don't want to put
                                                                         THE WITNESS: The facility resides on 7.6 acres
14
                                                               14
     the words in your mouth -- but if I recall -- and it's
                                                                     or so.
15
     getting late, so you know, my brain cells are slowing
                                                               15
                                                                          DR. WOLF: Okay. So 7.6, so we're looking at
16
     down a little bit -- but I think -- and perhaps, you
                                                               16
                                                                     about 19 acre feet of precipitation over your facility.
17
     know, correct my interpretation, but you mentioned that
                                                               17
                                                                     And kind of tying it a little bit back to the first
18
     this was most like an unusual or a really -- what is
                                                               18
                                                                     question that my colleague asked here, you gave a
19
                                                               19
                                                                     hypothesis of the possibility that the headworks drain
     the term that was --
20
                                                               20
          THE WITNESS: Are you talking about the
                                                                     would actually -- the overflow would be pumped back
21
                                                               21
                                                                     into the plant.
     flooding?
22
                                                               22
                                                                             So if we consider 19 acre feet of
          DR. WOLF: Pardon me?
23
                                                               23
          THE WITNESS: The flooding?
                                                                     water -- surface water on the plant, plus the water
24
          DR. WOLF: No. The diesel emergency bypass
                                                               24
                                                                     discharged from the sewage -- you know, I don't want to
25
                                                               25
                                                                     us to go through the math tonight, but it doesn't --
     pump.
```

Page 539

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

```
1
           THE WITNESS: I'm more of a cubic feet person
                                                                1
                                                                     District that it was about 38,000 gallons of water and
2
                                                                2
                                                                     that is how much was backing up. And I know I'm
     or gallon person.
 3
                                                                3
          DR. WOLF: Well, I can do it in cubic feet,
                                                                     talking gallons earlier and I was talking acre feet,
 4
     too. That is not a problem.
                                                                4
                                                                     but -- and I don't want to belabor this because I know
 5
           THE WITNESS: To that I guess I would say that
                                                                5
                                                                     it's getting late -- but it seems that there is -- that
 6
                                                                6
     there are sumps. As far as I know, it is sized to
                                                                     we're looking at very large inconsistencies, and
7
                                                                7
                                                                     quantities, and I recognize it's not an exact science,
     accommodate the precipitation levels. It is not sized
     to accommodate inflow from various water structures.
                                                                8
                                                                     but --
9
                                                                9
     You do also have to remember this is a wastewater
                                                                          THE WITNESS: Well, I guess, understanding the
10
                                                               10
                                                                     seriousness of your inconsistencies, perhaps if you can
     treatment facility.
11
               A good portion of that 7.6 acres is
                                                               11
                                                                     elaborate. Where are those inconsistencies?
12
     comprised of large diameter tanks. Those tanks are
                                                               12
                                                                          DR. WOLF: The inconsistencies, in terms of the
13
     intended to treat that facility -- to treat that water.
                                                               13
                                                                     assumption that all the drain water is basically
14
     Some of it is this large. Slow moving water that is
                                                               14
                                                                     recycled back in the plant --
15
                                                               15
     designed to settle out the solids. Transfer them to
                                                                         THE WITNESS: Oh, sure.
16
     the solid digestion location to treat the actual plant
                                                               16
                                                                          DR. WOLF: -- and also, there does not seem to
17
                                                               17
     water.
                                                                     be an easy way of calculating how much sewage water was
18
                                                               18
               So some of that would be fine within the
                                                                     coming out of the headwork.
19
     treatment system already. What that is, these are
                                                               19
                                                                          THE WITNESS: Oh, out of headwork. I
                                                               20
20
                                                                     apologize. I didn't understand that you were talking
     large 70-diameter tanks, 40-diameter tanks.
21
           DR. WOLF: Correct. But those tanks -- those
                                                               21
                                                                     about the 19th. I thought you were talking about the
22
                                                               22
     tanks were not empty?
                                                                     site and the ability to handle water.
                                                               23
23
          THE WITNESS: They were not.
                                                                              A couple comments there. We -- if you
24
          DR. WOLF: They were not empty?
                                                               24
                                                                     can pull back up the map so I can show you. There are
                                                               25
25
                                                                     several manholes on-site. We discharged from one of
           THE WITNESS: No.
                                                    Page 542
                                                                                                                    Page 544
                                                                     the manholes, which we know put off-site, because the
          DR. WOLF: You know when the event occurred, so
                                                                1
2
                                                                2
     you can't -- you cannot make the assumption that these
                                                                     site does not have water on it typically. So that
3
     tanks were able to capture, you know, this volume of
                                                                3
                                                                     water came on-site.
4
                                                                4
     water?
                                                                              We spilled from a manhole. That manhole
5
                                                                5
          THE WITNESS: Sure. Sure. I guess -- I never
                                                                     commingled with water -- if you can refer to the
6
     performed an analysis of the drainage system on-site.
                                                                6
                                                                     picture here.
7
                                                                7
     I do know that it's there. It works. There's never
                                                                              This is not addressing your headworks,
8
     been a flooding issue on-site, so it accommodates the
                                                                8
                                                                     but we can get there in a second. This is -- this blue
9
                                                                9
     rain. How it does that, I'm not quite sure. It did
                                                                     water represents the Oceano Lagoon water, and it was
10
     not accommodate this incident.
                                                               10
                                                                     probably at a further extent than this. We drew a
11
          DR. WOLF: So you will agree that there is a
                                                               11
                                                                     pictorial for you to help your understanding of what
12
                                                               12
                                                                     happened. The water came this way on the site, and it
     question mark?
13
          THE WITNESS: Well, I have never seen proof in
                                                               13
                                                                     encroached on to the site. At that particular
14
     the past that shows me that we flood frequently and
                                                               14
                                                                     topographical grade line, in which we know water
15
     flooded to the point that we can't accommodate.
                                                               15
                                                                     rose --
16
              I've never seen or heard of the pumps
                                                               16
                                                                          THE REPORTER: Excuse me, could you slow down?
17
                                                               17
     being overrun and not accommodating. So this isn't
                                                                          THE WITNESS: -- we did discharge from this
18
     just a gravity system. So you may be landing water on
                                                               18
                                                                     manhole right here. And that entire time we were
19
     the ground and putting it in a pumping system which is
                                                               19
                                                                     discharging, that water was there, we were spilling
20
                                                               20
     pumping upwards, a combined pumping close to an MGD in
                                                                     into this part, which is interconnected with the Meadow
21
     the treatment works.
                                                               21
                                                                     Creek.
22
                                                               22
          DR. WOLF: Yeah, so --
                                                                              And what we did in this particular
23
                                                               23
          THE WITNESS: That could process a lot of
                                                                     instance, is we needed to evaluate this from a
24
                                                               24
     water.
                                                                     hydraulic study. We spilled in. We carried this dirty
25
          DR. WOLF: I guess it was a statement from the
                                                               25
                                                                     water that now becomes sewage. Now, the analysis that
```

Page 543

```
we did here, is that we said that water at one time was
                                                                    fighters here. There's grass right here. And this is
2
     not there.
                                                                2
                                                                    a -- I'm sorry, this is a dirt portion of the -- this
3
                                                                3
                                                                    is a section that has sumps.
               It encroached up the site over a great
     ridge on the edge of the property and the elevation
                                                                4
                                                                              But this is all asphalt leading to an
                                                                5
     break. It encroached on the site, hung out on the site
                                                                    entire asphalt section back in here. These are the --
 6
     for a while, and then the floodwaters eventually
                                                                6
                                                                    this is all asphalt here. So I would guess -- I mean,
7
                                                                7
     receded. And when that water receded, if you have a
                                                                    taking away the facility, you're maybe looking at 45
8
                                                                8
     wall, for instance, and that water goes above that wall
                                                                    percent, maybe.
9
     line and it's on a slope, that water, the last inch or
                                                                9
                                                                          DR. WOLF: Okay. So about -- your infiltration
10
                                                               10
     so is going to skim off-site and the rest is going to
                                                                    covers about 50 percent of the facility, more or less?
11
     stay on-site, and it will be collected.
                                                               11
                                                                         THE WITNESS: Well, keep in mind, this was a
12
              So what we did is we did a sewer
                                                               12
                                                                    significant rain event. The conditions were highly
13
     assessment of that wastewater that came out of here.
                                                               13
                                                                    saturated. Those were the elevated flows we saw in the
14
     Analyzed across this dimensional water space, and
                                                               14
                                                                    sewer system. So I don't -- I wouldn't consider the
15
                                                               15
     skimmed off that top surface, which would typically be
                                                                    infiltration rate occurring at this event. I would
16
     the elevation of the known elevation.
                                                               16
                                                                    consider run off probably back on to that, that
17
              The county determines a 12-foot water
                                                               17
                                                                    structure itself. In my opinion, in my professional
18
     elevation, minus that grade break elevation. So that
                                                               18
                                                                    opinion.
19
     is the water that went away --
                                                               19
                                                                         DR. WOLF: Thank you very much. I have used
20
                                                               20
          THE REPORTER: Excuse me --
                                                                    enough of your patience --
21
          THE WITNESS: -- and that is what we report --
                                                               21
                                                                         THE WITNESS: Sure.
22
                                                               22
                                                                         DR. WOLF: -- and your time.
     the one that contradicts the statement that was made by
23
                                                               23
     the State in their rebuttal saving that we did not
                                                                         THE REPORTER: Excuse me, could we take a
24
                                                               24
                                                                    break, please? It's been two hours.
     account for on-site storm water.
25
                                                               25
                                                                         MR. YOUNG: Sure.
              So that is how we accounted for the
                                                    Page 546
                                                                                                                   Page 548
                                                                1
     floodwater collecting the wastewater on-site, and the
                                                                                   (Break taken.)
                                                                2
                                                                         MR. YOUNG: All right. So where were we?
2
     fact that it did recede. We obviously knew, taking a
                                                                3
3
     fair stab at this, and trying to do what is right, that
                                                                         MR. HARRIS: Me.
4
     water came on and it commingled. And there has to be
                                                                4
                                                                         MR. YOUNG: Okay. Mr. Harris.
5
                                                                5
                                                                         THE WITNESS: If I could, for the record real
     some kind of account for that.
6
               The practice was that it came up,
                                                                6
                                                                    quickly -- I'm sorry to interject here. I'd like to
7
                                                                7
     breached a grade break, eventually settled back down
                                                                    make a clarification on a question asked of me just
8
                                                                8
     again on the normal water level. It's going to hit
                                                                    moments ago regarding the financial funds for the
                                                                9
9
     that pitch point where it can't go one way or the
                                                                    budget.
                                                               10
10
     other, and half of it stays and half of it leaves.
                                                                              I stated before that fund 20 primarily
11
     Where that break is and the elevation is, that skim off
                                                               11
                                                                    came from rate and hook ups respectively. I would like
12
     of water is considered to be sewage water.
                                                               12
                                                                    to conclude that those do come from rates and
13
          DR. WOLF: Thank you.
                                                               13
                                                                    interest -- hook ups and interest only. So it's a
14
              How much nonpermeable surface do you have
                                                               14
                                                                    clarification I made by speaking with the Board of
                                                                    Director. I just wanted to clarify that.
15
     out of the seven-and-a-half acres?
                                                               15
16
                                                               16
          THE WITNESS: Nonpermeable?
                                                                         MR. YOUNG: Okay. Mr. Harris.
17
                                                               17
                                                                         MR. HARRIS: My first question -- the
          DR. WOLF: Yes.
18
          THE WITNESS: I don't know if we have a good
                                                               18
                                                                    District's great expense and trouble hiring RMC to do
19
     exhibit that will show that. I can do my best at
                                                               19
                                                                    an analysis of the State's estimates of how much was
                                                               20
20
     trying to -- I don't have a quantity for you, but
                                                                    spilled and to offer an alternative.
21
     essentially this structure here, if you follow this red
                                                               21
                                                                              And -- so I assume that the District felt
22
                                                               22
     line, this is all roadway that comes over here. This
                                                                    pretty comfortable with RMC with their ability to
23
                                                               23
                                                                    predict the size of the spill. But the District's
     is all asphalt.
24
                                                               24
               What I'm going to do now is draw in the
                                                                    estimate differs substantially from what RMC came up
     areas of grass. There's grass between these fire
                                                               25
                                                                    with. Can you answer why the District did not adopt or
                                                    Page 547
                                                                                                                   Page 549

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

use RMC's estimate? 1 This methodology, while it was a great 2 2 number in the end, it matches what we feel -- well, THE WITNESS: Well, that is a very good 3 3 matches RMC almost exactly. It matches corrections, question. Getting back to some testimony earlier about myself, the District initially did a five-day report. 4 which we try to apply to the State's methodology 5 And in that five-day report, we considered three 5 through prior meetings and 674 (phonetic) after we 6 different storm methodologies. We considered the 6 corrected some issues we had with theirs. And we were 7 7 very happy with that. We were very pleased it ended up duration of the flow, as well as the pump curve 8 methodology, as well as that of Mr. Appleton. 8 that way. We submitted it all. 9 We submitted all three reports for 9 But in the end, as I mentioned, there is 10 review. We indicated that we thought the most 10 a CIWQS requirement that is part of the current NRP 11 11 that requires you report allocation. It requires that defensible, and the one that fit most in their 12 reporting requirements, which we testified to before, 12 you report manhole-by-manhole basis. This only 13 was the duration and flow method. 13 indicates what is happening at the headworks. 14 14 This is not the spill that occurred. It But we did do a flow-curve analysis. We 15 performed that on our own. We basically took a look at 15 occurred in the entire community. We don't know how to 16 the flow. We spoke with the operators. We asked for 16 distribute that volume right there, around manholes, 17 17 around many locations. Do we do it equally? So we storms that were most significant or related to the 18 went with something that was the most defensible. That December 19th event. 18 19 They provided two storms in general. One 19 was with speaking with the community. That was 20 being in January 2006, I believe. And we took a look 20 receiving photographs. That was applying engineering at the rain events and the flows that were 21 analysis that we could rely on. And for that reason we 22 22 responsible -- the flow that occurred as responsive, submitted that report. 23 23 and we created our own hydrograph, and we kind of However, we held back nothing. We 24 tweaked at it and tweaked at it. And we did an 24 submitted all of our evidence to them. All of our --25 25 we submitted binders, probably four binders. We felt analysis where we kind of extended it and made it match Page 550 Page 552 1 where we thought it should match. like we overwhelmed them, and we asked if we could come 2 2 And based upon the flow that occurred at up to Sacramento and visit with them. We said, we gave 3 the time of the failure, the flow data that we received 3 you so much. We want to make sure you understand it. 4 4 in the two significant rain events, and we ended up We want to sit down at the table with you and go over 5 5 with a value of 600 and -- let's see, which one is this and see what you think. And we had three or four 6 ours? 6 meetings up there, at least, talking about methodology. 7 7 MS. THORME: The bottom. So you know, again, it was a level of 8 8 THE WITNESS: The bottom one. So this is transparency. But maybe at the end of the day, we're 9 9 January 5th, 2011, five-day report to the State Water engineers, we have to be able to stand behind what we Board. We calculated 654,000 gallons --10 10 do and make our judgments in the best interest of our 11 11 MS. THORME: And that is Exhibit 9. pursuit. So we went with number one, methodology. 12 12 MR. HARRIS: Okay. The October 2011 event, the THE WITNESS: This is compared to the RMC 13 13 value, which are, in my mind, the true experts. They shunt trip, you mentioned that the wiring, prior to 14 have the modeling expertise, the knowledge. We came up 14 that, had been rerouted to a wall and a new conduit to 15 15 within 20,0000 gallons of their final number. provide an air gap, but you still had problems on 16 Now, the reason we didn't go with this 16 October 2011. What was that caused by? 17 17 number, as I mentioned, we just couldn't justify it. THE WITNESS: That's correct. What happened 18 18 And you have to think back. This is not the current there was an attempt to fix what we thought was -- if 19 day. This is not under the spotlight of the Water 19 you remember my testimony -- when this first happened, 20 20 Board. the water, we knew had migrated into the conduits. It 21 We did a ton of information. We gathered 21 traveled down to the pumps. It shorted the number 4 22 22 a ton of information and did a ton of work and did our pump, and we found the interior portion of the motor 23 23 due diligence as professionals to try to acquire what moist upon inspection.

24

25

Page 551

We pulled them all out. We sent them to

a repair shop. We had them coated. I believe some of

we felt to be the best fit and most appropriate

methodology, and the most defensible methodology.

TRANSCRIPT OF HEARING

```
the bearings got replaced. We put the pump back in
                                                                 1
                                                                      provided it. And I'm assuming it had not been
2
     place. We thought it was a pump issue. We thought
                                                                 2
                                                                      completed.
3
                                                                 3
     that we could inject that water right in the heart of
                                                                               Why didn't the District -- when that
     the pump. Low and behold, we injected it into the
                                                                 4
                                                                      request came in, why didn't the District provide the
5
     shunt trip, that is what caused the primary breaker
                                                                 5
                                                                      most recent monthly report to Mr. Horner, because
6
                                                                 6
     issue that we had.
                                                                      clearly, it looks like you're producing a monthly
7
                                                                 7
              So we thought by creating that air gap,
                                                                      financial statement?
     as Mr. Thoma testified to today, that that would
                                                                 8
                                                                           THE WITNESS: That's a good question. I'm
9
     resolve the issue of the water migrating up in the
                                                                 9
                                                                      trying to think back.
10
     pumps. That was performed in August 2011.
                                                                10
                                                                               We provided the 2008, 2009, 2010
11
              Then on October 4th of 2011, we had a
                                                                11
                                                                      financial statements, as well as the District budgets.
12
     very similar incident where water migrated in, into
                                                                12
                                                                      In my opinion, the District budgets are an accurate
13
     that pull box, traveling down the conduit. This time
                                                                13
                                                                      representation. Mr. Horner testified to that today,
14
     it was not the conduits. The conduit was still in
                                                                14
                                                                      but --
15
     place. The shunt trip, if you remember, was down in an
                                                                15
                                                                           MR. HARRIS: That is not my question. The
16
     elevated structure. So it had passed through into
                                                                16
                                                                      question is, this is a monthly financial statement,
     that. That is where we truly determined that it was
                                                                17
                                                                      it's not a budget. So if he was asking for the most
18
     the shunt trip itself and not the motors.
                                                                18
                                                                      recent information so he can do an accurate ability to
19
          MR. HARRIS: Earlier, you showed an exhibit
                                                                19
                                                                      pay analysis --
20
     that had some corrective actions listed on it. I don't
                                                                20
                                                                           MS. THORME: Can I just jump in there, because
21
     recall if it was a table that showed --
                                                                21
                                                                      Mr. Horner never asked us for that and --
22
          MS. THORME: Exhibit 9?
                                                                22
                                                                           MR. HARRIS: But you're not testifying, right?
23
          MR. HARRIS: -- and I'm wondering, were those
                                                                23
                                                                           MS. THORME: I understand, but you're -- you
24
     ones that you proposed to do or were they ones that you
                                                                24
                                                                      said that Mr. Horner had asked us for that, and that is
25
     had done in response to the events --
                                                                25
                                                                      not a correct statement.
                                                     Page 554
                                                                                                                     Page 556
1
         THE WITNESS: What we did -- you know our
                                                                1
                                                                          MR. HARRIS: No, I said he asked for the annual
2
     efforts were multifaceted after the event. We were in
                                                                 2
                                                                     financial report, right, the 2011 is what he had asked
3
     the midst of the spill. We were trying to figure out
                                                                 3
4
     what happened, where it happened, how it happened. Who
                                                                 4
                                                                          MS. THORME: Right.
5
                                                                 5
     was effected. What we needed to do. And part of that
                                                                          MR. HARRIS: And it was not forthcoming. And I
                                                                     assume that it was because it had not been completed.
6
     was the recovery process of what we needed to do to
                                                                 6
7
                                                                 7
     make sure this doesn't happen again.
                                                                          MS. THORME: Right.
8
                                                                 8
             So we created a number of issues. For
                                                                          MR. HARRIS: Would it not have been to your
9
                                                                 9
     instance, we noted a high amount of I and I in the
                                                                     advantage and would it not have been the most
     system. So we hadn't in the past done an I and I
                                                                10
                                                                     forthright thing to do is to say, Mr. Horner, but we do
11
                                                                11
     study. So we did that I and I study.
                                                                     have monthly financial statements that we do, and we
12
             We monitored for four weeks. We took a
                                                                12
                                                                     can provide you the most recent one, which would have
13
    look at the inflow of the system. The portion of this
                                                                13
                                                                     taken him up to date to whatever month that was.
14
    rewiring over the -- over the wall. We did a breaker
                                                                14
                                                                          MS. THORME: Well, legally we received a
15
     study, that we spoke about --
                                                                15
                                                                     subpoena from the prosecution team. We responded to
16
         MR. HARRIS: I will just cut to the chase. So
                                                                16
                                                                     the request that they had, and they asked for specific
17
     of those that were suggested, how many of those were
                                                                17
                                                                     things, including the actual term that he used, which
18
                                                                18
     completed?
                                                                     the District does not have because they don't have
19
         THE WITNESS: I believe all of them had been
                                                                19
                                                                     documents by that term. So we produced documents in
20
                                                                20
     completed.
                                                                     response to the subpoena, which were produced on August
                                                                     13th, and that document came after that date.
21
         MR. HARRIS: Okay. The report that was
                                                                21
22
     recently -- the monthly financial report that was
                                                                22
                                                                          MR. HARRIS: This document came after, but you
     recently provided, Mr. Horner testified earlier in the
                                                                23
                                                                     had one for June, May, April.
                                                                24
24
     day that, I believe, had tried to get the 2012, 2011
                                                                          MS. THORME: But they didn't request those
     annual financial report, and that the District had not
                                                                25
                                                                     documents.
                                                     Page 555
                                                                                                                     Page 557
```

TRANSCRIPT OF HEARING

```
1
          MR. HARRIS: Okav. You had mentioned
                                                                   of a hundred-vear event?
2
     earlier -- you had used the term earlier when we were
                                                               2
                                                                        THE WITNESS: I do not think the intensity that
3
     talking about what you do when floodwaters -- when it
                                                               3
                                                                   I saw of that two-day period meets that, that event.
4
     was bypassed and over to the sludge pumps?
                                                               4
                                                                   There was significant flooding, which would be
5
          THE WITNESS: Yes.
                                                               5
                                                                   characteristics of a potential 85-year or 80-year
6
          MR. HARRIS: Based on your understanding of the
                                                               6
                                                                   flood, 100-year flood. I don't know.
7
                                                               7
     Federal regs (phonetic), what is the definition of
                                                                        MR. HARRIS: Okay. So that would mean that you
8
                                                               8
     "bypass"? Does that action meet the definition of
                                                                   did not meet that permit requirement then, in your NPDS
9
     bypass?
                                                               9
                                                                   permit?
10
          THE WITNESS: That was just bypassed on-site
                                                              10
                                                                        THE WITNESS: Not according to my knowledge of
11
                                                              11
     for temporary storage. Bypass did not occur. It did
                                                                   the event.
12
     not bypass --
                                                              12
                                                                        MR. HARRIS: Okay. Thank you very much.
13
          MR. HARRIS: So it does not meet the definition
                                                              13
                                                                        MS. MACEDO: I have -- I'm sorry to interrupt,
14
                                                              14
                                                                   but just to respond to Ms. Thorme's interaction with
     of Federal law as bypass as you --
          THE WITNESS: My understanding is that portion
                                                                   Mr. Harris, I just wanted to -- switch me to D, please.
15
                                                              15
16
     of what I consider to be a bypass, did not bypass the
                                                              16
                                                                            She mentioned the subpoena, and since I'm
17
                                                              17
                                                                   the one that issued it, i just wanted to point out
     definition --
18
          MR. HARRIS: Okay. So it's a misuse of the
                                                                   request number 13, which gave the District an
                                                              18
19
     term?
                                                              19
                                                                   opportunity to provide any documentation that they
20
                                                              20
                                                                   wanted the Board to consider, related to the District's
          THE WITNESS: Correct.
21
          MR. HARRIS: Okay. Earlier you stated that you
                                                              21
                                                                   ability to pay. That's it.
22
     did not believe that the precipitation that occurred on
                                                              22
                                                                        MR. YOUNG: Did you ask for any monthly
     or around the event was one-hundred-year flood; is that
                                                              23
23
                                                                   financial statements?
24
                                                              24
                                                                        MS. MACEDO: We asked for -- Mr. Horner reviews
     correct?
25
                                                              25
          THE WITNESS: That I did not believe that, yes.
                                                                   comprehensive annual financial reports. They provided
                                                   Page 558
                                                                                                                  Page 560
1
          MR. HARRIS: Correct. But the permit contains
                                                               1
                                                                   three -- the previous three fiscal years of audit
2
     language that says I believe that wastewater treatment
                                                               2
                                                                   financial reports, and then 13 was designed to be a
3
     plant must be built, maintained to withstand a hundred
                                                               3
                                                                   catch-all that they were given the opportunity to
4
     year, 24-hour event, correct?
                                                               4
                                                                   provide anything else, because we knew that we had
5
                                                               5
          MS. THORME: No, that is not correct?
                                                                   public budgets. They had given us documents and
                                                               6
6
          THE WITNESS: That's not correct.
                                                                   settlement discussions.
7
                                                               7
          MR. HARRIS: Will you correct me, please?
                                                                             So 13 was designed to -- anything else
8
          THE WITNESS: I believe it says
                                                               8
                                                                   you want the Board or us to look at, because at this
9
                                                               9
     one-hundred-year storm.
                                                                   point, the burden has shifted to them to prove it as an
10
          MR. HARRIS: Okay. One-hundred-year storm, but
                                                              10
                                                                   affirmative defense.
11
     we determined this was not one-hundred-year storm?
                                                              11
                                                                        MR. YOUNG: Okay.
                                                              12
12
          THE WITNESS: Well, there's -- there's a number
                                                                        MS. MACEDO: Sorry to interrupt.
                                                              13
13
     of requirements to classify a one-hundred-year storm.
                                                                        MR. YOUNG: Mr. Yonker, you had testified that
14
     It's duration and time and quantity and volume.
                                                              14
                                                                   no customers of the District submitted any claims; is
15
          MR. HARRIS: So do you think that this -- so
                                                              15
                                                                   that correct?
16
     let's focus on the permits. So the permit has
                                                              16
                                                                        THE WITNESS: That's correct.
     requirements in there that you -- they must be built,
                                                              17
17
                                                                        MR. YOUNG: Did the District inform its
18
     maintained to hold up to a one-hundred-year event
                                                              18
                                                                   customers that they could file claims?
19
     storm, whatever you want to call it.
                                                              19
                                                                        THE WITNESS: Not that I'm aware of.
20
                                                              20
                                                                        MR. YOUNG: Do you know if the District
              Would you agree with that general
21
     statement? We can go to the regs (phonetic) and look
                                                              21
                                                                   informed or offered to pay for any damage within their
22
                                                              22
                                                                   customers' homes or property that may have been
     at it, but --
23
                                                              23
                                                                   affected by the spill?
          THE WITNESS: Sure.
                                                              24
                                                                        THE WITNESS: I do not think we did. I know
24
          MR. HARRIS: Okay. Do you think this storm was
     of such a size or duration, that it met that threshold
                                                              25
                                                                   this was a significant wet-day storm, as opposed to a
                                                   Page 559
                                                                                                                 Page 561
```

TRANSCRIPT OF HEARING

```
standard-dry day, you know, somewhat different in the
                                                                1
                                                                         MR. JEFFRIES: The bottom of the page.
2
     past. The significant impact that I saw was guite a
                                                               2
                                                                         MR. YOUNG: On the bottom of page one.
3
                                                               3
     bit of flood damage.
                                                                         MR. JEFFRIES: And it ends up on the back side
4
                                                                    of page one. And it says, "because its contracted
          MR. YOUNG: My question is, did the District
                                                                4
5
     offer to compensate or reimburse any of its customers
                                                                5
                                                                    payroll services, funds are transferred periodically to
6
     who may have been affected by the spill within their
                                                                6
                                                                    the LAIF, in order to cover these expenses."
7
                                                               7
                                                                         THE WITNESS: Well, my answer to that would be
     homes or property?
8
                                                               8
          THE WITNESS: I do not believe so.
                                                                    that funds 20 is a protected fund, potentially funds --
9
          MR. YOUNG: Okay. Mr. Jeffries?
                                                                9
                                                                         THE REPORTER: I'm sorry, but could you please
10
          MR. JEFFRIES: Let me ask you the question a
                                                               10
                                                                    speak louder and slow down? You are trailing off at
11
                                                               11
     little bit differently than Mr. Young did.
                                                                    the end.
12
              Were there any insurance companies on
                                                               12
                                                                         MS. JAHR: Could you just restate that for us?
13
     behalf of their clients, ask for payment for
                                                               13
                                                                         THE WITNESS: Oh, sure.
                                                               14
14
                                                                             Fund 20 is a statement that I made saying
     reimbursement?
15
                                                               15
          THE WITNESS: No.
                                                                    it's protective fund. As far as I know, fund 20 can't
16
          MR. JEFFRIES: That you know of?
                                                               16
                                                                    be touched, so it is possible that is a fund 19
17
                                                               17
          THE WITNESS: None that I know of.
                                                                    transfer. I'm not sure.
18
          MR. JEFFRIES: Okay. I'm a little concerned
                                                               18
                                                                         MR. JEFFRIES: Well, then how would you know
19
     about the restricted funds, because I serve as a chair
                                                               19
                                                                    when you're transferring funds, you're not transferring
                                                               20
20
     of a special district, and we have restricted funds.
                                                                    funds that are restricted when they are commingled?
     We show that on a different line, so it shows
                                                               21
                                                                         THE WITNESS: That is a very good question. We
22
     restricted funds. And we do not commingle our funds in
                                                               22
                                                                    do have an ability to pay slides that we prepared,
23
     LAIF accounts or any other type of accounts. But I
                                                               23
                                                                    which we talked about. The legalities are restricted
24
     noticed in this particular financial statement, which I
                                                               24
                                                                    funds, if you would like to say that.
                                                               25
                                                                         MR. JEFFRIES: No. I think you've pretty well
     think should have been submitted earlier today instead
                                                    Page 562
                                                                                                                   Page 564
     waiting till late tonight -- it's poor judgment on your
                                                               1
                                                                    answered my question, and I know you're not an
2
     representatives to do that. Not only that, but if you
                                                                2
                                                                    accountant so -- but I just wanted to point that out
     add up the cash of life across, it's off by a dollar.
3
                                                               3
                                                                    that it might be better if you had it separated. It
4
              It should read $3,400,505, instead of 504
                                                                4
                                                                    would be easier to understand.
5
                                                                5
     dollars. What's a dollar when you're talking about
                                                                             My next question is, the information the
6
     millions.
                                                                6
                                                                    RMC used to come up with the calculations of the amount
7
                                                               7
               But I'm assuming that that $3,400,504, as
                                                                    of the spill, most of those numbers were submitted by
8
     you show, is restricted funds and cash flow, as well?
                                                               8
                                                                    your agency; is that right?
                                                               9
9
     Is that -- I know you're not an accountant, but do
                                                                         THE WITNESS: I would not say most of them, but
10
                                                               10
     vou --
                                                                    I would say a portion of them, yes.
11
                                                                         MR. JEFFRIES: Okay. And is that why you think
          THE WITNESS: Well, I'm not an attorney, and I
                                                               11
12
     don't claim to be. To the best of my knowledge, this
                                                               12
                                                                    that your calculations and their calculations were
13
     fund cannot be touched. It must be utilized for the
                                                               13
                                                                    pretty close to the same, because you supplied some of
14
     purposes for which it is collected.
                                                               14
                                                                    your numbers to them?
15
                                                                         THE WITNESS: No. We can pull up a sheet that
          MR. JEFFRIES: Okay. And then it goes back
                                                               15
16
     here, it says life transfers. It says here on Rabobank
                                                               16
                                                                    shows where the calculations came from and where they
17
     funds as of July 31st, a reconciled cash balance of
                                                                    were performed by a professional stamped engineer as
                                                               17
18
     Rabobank, a total of $23,587.
                                                               18
                                                                    the RMC expert testified, he did not fully review them,
19
                                                               19
                                                                    but he did give them --
              This is an account that processes LAIF
20
                                                               20
     transfers for the issuance of payroll checks through
                                                                         MR. JEFFRIES: Yeah, his testimony said he did
21
     the District. Now, if that is the case that those are
                                                               21
                                                                    not go back and review all of the numbers because he
22
                                                               22
     all restricted funds, why are you using them for
                                                                    received them from the agency.
23
                                                               23
                                                                         THE WITNESS: We gave him a cursory review, and
     pavroll?
                                                               24
24
          THE WITNESS: Well, I'm going to have to catch
                                                                    they were performed by a professional and felt they
     up with where you are. Could you point that out to me?
                                                               25
                                                                    were appropriate.
                                                    Page 563
                                                                                                                   Page 565
```

TRANSCRIPT OF HEARING

1	MR. JEFFRIES: Now, you didn't have anybody	1	MR. JEFFRIES: Was there any investigation?
2	that just took it as to audit yours or RMC's analogy	2	THE WITNESS: Yes.
3	and didn't receive any calculated numbers from your	3	MR. JEFFRIES: Okay. And can you explain what
4	agency to calculate the spill?	4	you found?
5	THE WITNESS: I'm sorry, but can you repeat	5	THE WITNESS: I can explain the investigation.
6	that question?	6	I can explain the investigation from our end, and I can
7	MR. JEFFRIES: Well, what I'm trying to get at	7	explain the lack of the investigation from the State's
8	is, I just asked you that RMC reused some of your	8	end.
9	numbers that you supplied?	9	When the State contests hearsay, that the
10	THE WITNESS: Uh-huh.	10	homeowner states it was bubbling, the State was there
11	MR. JEFFRIES: And you said you had documents	11	to speak to the homeowner, but yet never took pictures
12	that showed that, but was there any review of those	12	to show where it actually existed relative to the
13	calculations by another independent company that	13	picture.
14	started from scratch?	14	My picture shows a driveway in the
15	THE WITNESS: There was not. The reason that	15	picture. I have a picture showing the dry weather and
16	there needs to be	16	wet weather and where that location is, as well as
17	MR. JEFFRIES: That's fine. You answered my	17	where it isn't in the bubbling and the lack of bubbling
18	question.	18	in the water.
19	THE WITNESS: Okay.	19	I also I'm pretty familiar with that
20	MR. JEFFRIES: The next question I have is that	20	system. That is a satellite collections system. And
21	photograph that showed some flooding that was taken by	21	if you are familiar with sewer systems I'm sorry if
22	the T.V. station	22	you are. I don't mean to belabor the point.
23	THE WITNESS: Yes.	23	But sewer systems run in segments,
24	MR. JEFFRIES: and you said that it and	24	typically 300 feet before there is a manhole for access
25	you showed another slide. The one slide by the	25	purposes. At the turn of that collection system, there
23		2 3	
	Page 566		Page 568
1	television station showed some bubbling coming up, and	1	is not a manhole. There simply is a clean-out. That
2	it was stated by the prosecution team that that was	2	clean-out is nothing more than a pipe that goes to a 45
3	from the clean-out location?	3	and entered out to a clean-out.
4	THE WITNESS: That's correct.	4	That clean-out is a four-inch structure
5	MR. JEFFRIES: Your testimony, if I understood	5	that was referenced in their calculation that was
6	you correctly, said by showing another photograph, that	6	underestimated, that allows the municipal crews to get
7	that location was not the same. It was a different	7	in there and clean that line because
8	location?	8	MR. JEFFRIES: All right. To clean it out.
9	THE WITNESS: That's correct.	9	THE WITNESS: So in this particular instance
10	MR. JEFFRIES: Okay.	10	if you can zoom in there on that picture on the bottom.
11	THE WITNESS: It's the same location, but they	11	Okay. At the end of that arrow is it
12	misplaced where the actual clean-out was.	12	possible to get it any bigger?
13	MR. JEFFRIES: Well, if I remember correctly,	13	Okay. At the very end of that arrow,
14	looking at those two photographs, yours was shown	14	spray painted green, is that clean-out. That clean-out
15	several feet away from where the photograph showed the	15	spray painted green by the satellite operations
16	bubbling.	16	facility, we coordinated with them to go down after the
17	THE WITNESS: It was about 20 feet away.	17	spill and locate all of their clean-outs and the
18	MR. JEFFRIES: Okay. So how do you attribute	18	facilities.
19	the bubbling coming up in that particular location,	19	Some of those clean-outs were buried
20	than the location where you pointed it out?	20	under the grass and debris, and so we actually had to
21	THE WITNESS: I don't	21	have them locate them and spray paint them green. So
22	MR. JEFFRIES: Is there another is there	22	that facility was actually located by their operation's
23	another clean-out there, or is there another manhole?	23	department and spray painted green and clearly
24	THE WITNESS: There is no other clean-out.	24	identified.
25	There is no other manhole. That is	25	The picture that you see presented by the
2 3	Page 567	2 3	Page 569

TRANSCRIPT OF HEARING

SEPTEMBER 7, 2012

```
State, which I'm sure we can pull up, is actually more
                                                                1
                                                                         MR. JEFFRIES: -- and you have no technical
2
     in line with that RV on the right and much closer to
                                                                2
                                                                    data to back that up?
3
                                                                3
     the windshield. There are no facilities down there.
                                                                         THE WITNESS: The technical data would be my
     There are no homes down there. This is the last home
                                                                4
                                                                    field visits down there to verify it was nothing. We
 5
     here. So this home has to connect upstream into the
                                                                5
                                                                    also have -- just to follow through -- we have the --
 6
     picture from where we are. If it doesn't, it can't
                                                                6
                                                                    we have surveyed grade geographical information system
7
                                                                7
     affect that line, and therefore cannot travel to the
                                                                    from our collection systems.
8
                                                                8
     treatment plant.
                                                                             That means we have it spacially and
9
              And if you look at that picture there on
                                                                9
                                                                    data-wise that we can position them spatially across
10
     the very back right -- what I'm seeing is a wind sheer
                                                               10
                                                                    the aerial map relative to the facility on the grounds,
11
     coming up from the RV. So in the very back, you have a
                                                                    so we know in terms of inverts so we know exactly where
                                                               11
12
     marsh back there. It's open ocean, and you can see the
                                                               12
                                                                    they are. This collection system is tied into that
13
     surface disturbance in the linear fashion in the back
                                                               13
                                                                    map, and we know where it exists. There is no facility
14
     of the picture. That is the wind going across there.
                                                               14
                                                                    down there that I'm aware of.
15
                                                               15
     You can see it better in the video that I witnessed,
                                                                         MR. JEFFRIES: You stated that -- and I think
16
     but that is the wind sheer.
                                                               16
                                                                    others from your group have stated -- that they never
17
                                                               17
                                                                    had an event like this at that facility; is that
              It's my opinion, that possibly that wind
18
     sheer is coming down the side of that 20-by-10 foot
                                                               18
                                                                    correct?
19
     trailer, or something along those lines. The actual
                                                               19
                                                                         THE WITNESS: That's correct.
20
     location of the clean-out is much closer to that saw
                                                               20
                                                                         MR. JEFFRIES: And have you done any
21
     horse that you see in the middle. It is to the right.
                                                               21
                                                                    background, as far as the miracle of 1997 floods that
22
                                                               22
                                                                    we had in this area, where we had cars floating down
     There is a grass berm where the road begins and the
23
                                                               23
     clean-out is down there.
                                                                    Higuera Street? The creek along 101 down the Pismo
24
          MR. JEFFRIES: So your theory --
                                                               24
                                                                    Beach was overflowing onto the 101.
25
                                                               25
          THE WITNESS: Right by --
                                                                         THE WITNESS: The background I have done has
                                                    Page 570
                                                                                                                   Page 572
                                                                    been community outreach through the county's program
          MR. JEFERIES: -- is that little disturbance in
                                                                1
2
     that right-hand corner of that photo, is wind sheer off
                                                                    where we attended a flood meeting. And the intent of
                                                                2
     of that motorhome that is sitting there?
3
                                                                3
                                                                    the flooding meeting was to educate the people on the
4
                                                                4
          THE WITNESS: I don't see that as being a
                                                                    event. How it happened. Why it happened, and what
5
                                                                5
     strong argument being made by the State. There is no
                                                                    they are going to do. That they have a series of
6
     photograph of a dry condition. They're down there
                                                                6
                                                                    events they are looking to put in place so make sure
7
     speaking to the residents. You would think they would
                                                                7
                                                                    this doesn't happen again.
8
                                                                8
     have the resident pointing to it and the photograph
                                                                             And at that time, I did hear stories like
9
                                                                9
     saying -- I'm sorry --
                                                                    that. But I also heard stories, at that time, there
10
          MR. JEFFRIES: Why would he be wading out there
                                                               10
                                                                    has never been an issue. We have heard testimony from
11
     in that water with sewage bubbling out?
                                                               11
                                                                    the public comments today that there have been storms
12
          THE WITNESS: The State went down and spoke
                                                               12
                                                                    that have been severe without flooding, and that is
13
                                                               13
     with these residents just last week in prior weeks --
                                                                    because the flap gates were operating or because people
14
     in August trying to get additional information about
                                                               14
                                                                    manually manipulated the flap gates.
15
     the spills. Spoke to this particular incident --
                                                               15
                                                                         MR. JEFFRIES: But part of your testimony is
16
     individual. His evidence was submitted as hearsay. It
                                                               16
                                                                    it's an act of God and that is the reason we had the
17
                                                                    flooding and that is the reason the plant failed. That
     was recognized as hearsay.
                                                               17
18
              And it lacks the photographic evidence,
                                                               18
                                                                    was part of your testimony that you gave; is that
19
                                                               19
                                                                    correct?
     in my opinion, to support that as a spill. I do not
                                                               20
20
     see that as a spill. It is not any kind of spill I
                                                                         THE WITNESS: That was correct, in terms of the
21
     have seen in the past. It is a surface disturbance,
                                                               21
                                                                    penalty factor that was presented by the State in my
22
                                                               22
     but certainly not caused --
                                                                    dispute to that.
23
                                                               23
                                                                         MR. JEFFRIES: You were not present the day of
          MR. JEFFRIES: So your theory is strictly it's
24
                                                               24
     a wind sheer --
                                                                    the 19th of December; is that correct?
25
                                                               25
                                                                         THE WITNESS: I was not on-site, no.
          THE WITNESS: I would --
```

TRANSCRIPT OF HEARING

```
1
          MR. JEFFRIES: And what day did you get
                                                                     We wanted to do this right. We wanted to be fair. And
2
     on-site?
                                                                2
                                                                     we disagreed with the penalty of volume that came up
3
                                                                3
                                                                     with the State that came up where the overall fine is
          THE WITNESS: I got on-site in the following
4
     few days. Perhaps on the -- let's see, Sunday would
                                                                     associated with that.
5
     have been the 19th. So perhaps by Tuesday or Wednesday
                                                                 5
                                                                              And we wanted to do a third party
6
                                                                 6
     of that week.
                                                                     analysis, because we wanted this to be fair and
7
                                                                7
                                                                     correct. We hired two independent third party mutually
          MR. JEFFRIES: Well, since you're the most
8
                                                                8
     responsible engineer for that particular plant,
                                                                     exclusive engineer professionals, both very, very
9
     wouldn't you think it would be important for you to be
                                                                9
                                                                     reputable, and we assigned them the task that we
10
     there?
                                                                10
                                                                     assigned them to take a look at, so there was no
11
                                                                11
          THE WITNESS: I'm most knowledgeable. I was --
                                                                     reason.
12
     I was at home that day with my family. I received a
                                                                12
                                                                          MR. HARRIS: So RMC was one of them, right?
13
     phone call about 7:00. I was informed of the events.
                                                                13
                                                                          THE WITNESS: RMC, yes.
14
                                                                14
                                                                          MR. HARRIS: Thank you.
     I was asked to provide information on the collection
15
                                                                15
     system because the operator wanted to get out and
                                                                          MR. YOUNG: Mr. Johnston?
16
     provide information.
                                                                16
                                                                          MR. JOHNSTON: Yes, just a couple of quick
17
                                                                17
              I'm knowledgeable about the systems and I
                                                                     questions.
18
     knew where the manholes were and where it was spilling
                                                                18
                                                                               I'm still trying to get my head around
19
     from at the time. So they went out -- as I understand
                                                                19
                                                                     the different ability to pay arguments made by the
20
                                                                20
     it, they were intending to go out and try to post the
                                                                     District and the prosecution team.
21
                                                                21
     locations.
                                                                              You testified that fund 20 cannot legally
22
              So I missed the flood event. That is
                                                                22
                                                                     be used for any purpose other than plant expansion; is
23
                                                                23
     true. I have gathered more information than I ever
                                                                     that correct?
24
     have wanted to gather and studied it. I have reviewed
                                                                24
                                                                          THE WITNESS: As I understand it, it can't be
                                                                25
     lots of it. And so I have not touched it, but I have
                                                                     used for any purpose other than the purposes that it is
                                                    Page 574
                                                                                                                    Page 576
                                                                     collected for.
1
     seen it.
                                                                1
2
                                                                2
                                                                          MR. JOHNSTON: Can it be -- can the District
          MR. JEFFRIES: Well, I asked a question -- I
                                                                     borrow against it for other purposes? In other words,
3
     know that -- I can't remember the gentleman's name, but
                                                                3
4
                                                                 4
     he was an electrical contractor, said they reengineered
                                                                     can they loan money to themselves for operating
5
                                                                 5
     the conduits, so they have an air gap; is that correct?
                                                                     expenses or other purposes out of that fund?
6
          THE WITNESS: The air gap that I believe you're
                                                                 6
                                                                          THE WITNESS: I -- let's see. Loan -- so
7
                                                                7
     referring to is the conduits that run over the headwork
                                                                     borrow against it for what purposes?
8
     structural wall. I can show you the exhibit and where
                                                                8
                                                                          MR. JOHNSTON: For -- let's say for general
9
                                                                9
                                                                     unrestricted operating purposes, whether it would be
     it's actually --
10
          MR. JEFFRIES: No, my question is, are those
                                                                10
                                                                     paying payroll, paying a fine, whatever it is,
11
                                                                11
                                                                     nonexpansion purposes?
     now sealed?
12
          THE WITNESS: Yes.
                                                                12
                                                                          THE WITNESS: I would say no.
13
                                                                13
          MR. JEFFRIES: Okay. Thank you.
                                                                          MR. JOHNSTON: Okay. I'm looking at the
14
          MR. YOUNG: Mr. Harris, then Mr. Johnston.
                                                                14
                                                                     exhibit you guys gave us, the financial report for
          MR. HARRIS: Can you tell me why the District,
                                                                     August 15th, 2012. And I'm looking at the balance
15
                                                                15
16
     when they hired CH2M Hill, did not have the RMC
                                                                16
                                                                     sheet portion of it, the last page, and if you look
     methodology peer review linked to the State's, as they
                                                                17
                                                                     cross the top at the cash balance, it shows that the
17
18
     did yours?
                                                                18
                                                                     operating fund has a $698,000 negative cash balance.
19
          THE WITNESS: I'm sorry, when we hired CHM2
                                                                19
                                                                     The fund 26 replacement fund, has $286,000 positive
20
                                                                20
     Hill, they did not have the RMC --
                                                                     balance. And the fund 20 expansion has a $4,300,000 --
21
          MR. HARRIS: No, why they did not look at the
                                                                21
                                                                     I'm rounding -- positive balance.
22
     RMC methodology for calculating the spill volume?
                                                                22
                                                                              It looks to me, looking at this, as
23
          THE WITNESS: We hired two third parties. It
                                                                23
                                                                     though the only way you can have an almost $700,000
24
     was not a cheap thing for us to do. It was a very
                                                                24
                                                                     cash negative cash balance in the operating fund, is if
     extensive process. It was part of our due diligence.
                                                                25
                                                                     you're borrowing from one of the other funds.
                                                    Page 575
                                                                                                                    Page 577
```

TRANSCRIPT OF HEARING

1	And I and there is not enough money in	1	what is its fiscal year?
2	the replacement fund to borrow from. There's only	2	THE WITNESS: The fiscal year begins in July.
3	\$286,000. You can't borrow \$700,000 from \$286,000.	3	MR. YOUNG: July 1st?
4	So it looks to me like the District is	4	THE WITNESS: Yes.
5	borrowing that \$700,000 deficit in the operating fund	5	MR. YOUNG: Okay. Do you know at the end of
6	from the expansion fund.	6	June, what the balance was in fund 19?
7	Can you give me an alternate explanation?	7	THE WITNESS: I do not know that.
8	THE WITNESS: I don't have an answer for that.	8	MR. YOUNG: The statement prior to this one, do
9	MR. JOHNSTON: Okay. The second question is,	9	you know if it had a negative balance?
10	there was testimony that the rates the current rates	10	THE WITNESS: That fund, I believe has been
11	were \$16 approximately?	11	negative. When I look at the recent bar chart that I
12	THE WITNESS: Yes. I do remember that, yes.	12	reviewed, I believe I see this where it was just
13	MR. JOHNSTON: And is that approximately,	13	starting to come out of the negative. So yes, I would
14	correct?	14	believe June is probably negative from my recollection.
15	THE WITNESS: It looks like it's about \$14.83	15	MR. YOUNG: And was money being transferred out
16	or something.	16	of that operating fund from the expansion fund?
17	MR. JOHNSTON: Okay. And can you just explain	17	THE WITNESS: I don't think that is the case.
18	a little bit about the rates structure to me? If I'm	18	I know at one time I want to say at one time they
19	in Oceano, do I pay a sewage fee to Oceano, and also to	19	used to transfer in fund 26, because fund 26 has no
20	the South San Luis Obispo County District, or do I pay	20	source for funding.
21	a sewage fee to Oceano that pays a portion to the South	21	But I don't I believe that would come
22	County District?	22	from transfer 19, but I don't believe that is something
23	THE WITNESS: Pretty much the former. They do	23	the District has done recently.
24	it each their own way. But they collect wholly for	24	MR. YOUNG: Okay. Thank you.
25	both services from the residents of those communities,	25	THE WITNESS: Sure.
	Page 578		Page 580
1	and then the District receives those funds directly	1	MR. YOUNG: All right. That concludes the
2	from agencies.	2	testimony for this witness, I believe.
3	MR. JOHNSTON: Okay. So the member agencies	3	And is that all you have for your case
4	collect from the residents, and then they remit a	4	THE WITNESS: Thank you.
5	portion to the District?	5	MR. YOUNG: through Mr. Yonkers?
6	THE WITNESS: That's correct. The member	6	MS. THORME: I was just going to ask him we
7	agency collects according to their own rate structure,	7	have how much time left?
8	base structure, but the 14 approximately 83, somewhere	8	MR. YOUNG: Well, we're doing closing arguments
9	around there is earmarked for the District services and	9	at this point.
10	that is the treatment portion of water services.	10	MS. THORME: Okay. Well, I would like to move
11	MR. JOHNSTON: Okay. So the and do you have	11	all the remaining documents into evidence because there
12	any idea what the sewage rates are for the three	12	was no objection. So just for housekeeping purposes,
13	Districts that would incorporate both the collection	13	we ask that all the District's documents will be moved
14	rate and the treatment rate?	14	in.
15	THE WITNESS: I want to say somewhere around	15	MR. YOUNG: Okay.
16	\$45 sounds right to me. They do different structures.	16	MS. JAHR: Yes, they were moved.
17	I have called three member agencies in the past. It's	17	MS. THORME: Thank you.
18	been quite some time. I believe that one of them is	18	MS. MACEDO: Yes, to the extent that we have
19	based upon water usage. The other is based upon a flat	19	dissolved all the objections regarding the prosecution
20	sewer rate. But the ballpark number that is off the	20	team's documents, I move that regarding our documents
21	top of my head is about \$45, in which the District gets	21	as well, and I believe the last known exhibit for the
22	14 or something.	22	hearing is the 118, which was provided to the Board and
23		23	council, which was a copy of the prosecution team's
	MR. JOHNSTON: Thank you.		
24	THE WITNESS: Sure.	24	PowerPoint presentation used today.

SEPTEMBER 7, 2012

culpability without justification. And there was no 1 MR. YOUNG: Okay. So we have five minutes for 2 closing arguments, and the District goes first, and 2 credit given for cooperation or stelar sewer system 3 3 then the prosecution goes last. spill history, where there has been no sewer spills 4 MS. MACEDO: And then we're done. 4 from this District in 25 years. 5 5 MR. YOUNG: Yeah. I'm just curious, are there They failed to justify any alleged 6 any members of the public that were not here when we 6 economic benefit, given the evidence that was presented 7 took their statements that still want to address the 7 today or excessive staff costs. We've never been 8 8 Board? provided with any timesheets to justify hour-by-hour, 9 Okay. Good. All right. 9 the cost that they are claiming. 10 10 MS. THORME: Okay. So you -- and I apologize, And they also failed to recognize that 11 but this isn't the most coherent closing argument ever, 11 there are severe road blocks to the ability to pay, and since it is nearly midnight at this point, but I will 12 12 that evidence was in Exhibit 98, among other places. 13 13 But Exhibit B, we laid out, based on the budget, which do my best. 14 14 is also an exhibit, which is how the District works and So you heard a lot of evidence today and 15 a lot of argument, and your job tonight, after -- when 15 funds their projects, that it was a very difficult 16 you deliberate this case, is to weigh the facts and 16 ability to pay problem. They have a large loan, which 17 judge the credibility of the witnesses, and I need you 17 was also in evidence, that they have to pay. 18 to remember who has the burden of proof in this case. 18 So at the very least, we would ask the 19 So the prosecution team has the burden to 19 Board to decrease the fine or decrease the volume or 20 20 disprove the District's spill volume estimates, and the decrease the factors, which are all, as you know, there 21 burden to prove each of the harm factors selected with 21 is sensitivity analysis, that if you move any of those 22 22 things in that spreadsheet, that the numbers go up or evidence. 23 23 The prosecution team failed to show that down. 24 the District's spill volume estimate was unreasonable. 24 We would also ask you that you seriously 25 They just said, basically they would do it differently. 25 consider the upset and bypass defenses. They are in Page 582 Page 584 1 And particularly with the CIWOS the permit for a reason. And discharger State that 1 2 requirement, as they currently exist, the 2 those words in that permit actually mean something. 3 manhole-by-manhole approach was the approach that was Even if the Water Boards never allow those defenses to 3 4 told to them by Jim Fischer, and that is what they did. 4 exist. And since the clean water act is strict 5 5 The prosecution team failed to justify liability, there are no other defenses besides upset 6 each of the enforcement factors, and the harm factor is 6 and bypass. That is it. 7 7 much higher than any other ACL. And the District met its burden to meet 8 8 If you look at Exhibit 101, which is up for each of these things. They showed that there was 9 9 on the screen right now, this shows numerous ACL an exceptional incident causing intentional and documents that we turned in as evidence in this case. temporary noncompliance and the causes identified. We 10 11 This document does not encompass all of them. We did 11 know what those things are. 12 not prepare this document. This was prepared by the 12 The permitted facility, at that time, was 13 13 prosecution team. being properly operated and had not had a spill in 25 14 But as you see, the red line in the 14 years. 15 middle is the District. And that is the harm factor of 15 The District submitted the required 16 five. Every other one of these was a harm factor of 16 notice. There was no counter evidence that the notice 17 17 was not timely, and they took the necessary remedial one to four. And numerous of these, which we will talk 18 about in a minute on the other side of this, were for 18 measures. 19 much larger spills. And some of these spills happened 19 Next slide, please. 20 20 on the same day as this. Upset is an affirmative defense. And 21 The District was not given any recovery 21 they threw out a red herring that this was not a 22 22 technology based requirement, and we didn't address the credit, even though it tried to store as much as 23 possible and was working very hard and had the backup 23 fact that it was technology based. A zero spill 24

24

25

Page 583

standard is technology based.

If you have one spill, you have violated

25

pump to push things through the treatment plant.

They gave them a higher than neutral

that technology based standard, and that was in our
2
     briefs, and we are argued it numerous times, even
3
     though it was not recognized by the prosecution team.
     And in the 9th circuit, which is where we live, they
 5
     had actually recognized the upset defense, and the
 6
     cases that were cited by the prosecution team were all
7
     District Court cases in New Jersey and Connecticut and
8
     other places that cannot overrule the 9th circuit. And
9
     we did showcases that actually found that sewer spills
10
     can be upsets.

And the other is bypass. And this assists with many of the alleged violations, including the storm water violation and part of the storage. So the District -- the prosecution team tried to say that this was not an intentional spill, and therefore, bypass does not reply.

But they took -- the District took
intentional acts to protect the integrity of the
wastewater treatment plant. And Mr. Appleton testified
that he intentionally did certain things, such as
intentionally close the input gates to stop the water
from coming to the treatment plant to protect the
headworks and to protect the downstream secondary
treatment from washing out.

and a \$700,000 penalty for 43 million gallons from raw sewage.

And I would like to point out in Exhibit 89 dash -- page 8. This regional board has been reasonable in the past. In one of your own ACL's, you had 1.8 -- 1.2 million dollar penalty, and \$800,000 of it was suspended if certain things happened. And 200 was in penalty and 200 was in SEP. So I would say that you have in the past, exercised great flexibility. And this was a recent ACL, so it was under the Enforcement policy as is.

So we would just urge you to please use the flexibility that you have. Either to recognize the defenses that are in the permit, or to exercise your flexibility in either the spill volume amount or the harm factors.

Thank you very much for sitting through this entire day. I know it has been painful.

MR. YOUNG: Okay. You went over by three minutes. I didn't want to stop you. I just wanted to let you know, so she has the same amount of time. So eight minutes.

MS. MACEDO: Thank you.

Rate payers are understandably concerned about the penalty in this matter. However, the Board

Page 586

Page 588

There are bugs in that treatment process, but if you wash them out, they are not going to work anymore, and then you would have had the effluent not meeting standards, which it did during the entire time.

He shut down the sumps that had the storm water to stop that storm water from coming back and creating more of a problem and washing out the treatment plant. And they intentionally set wastewater to the sludge lagoons.

So that was an unavoidable bypass to prevent severe property damage to the downstream part of the plant. There were no feasible alternatives at that time. They are on the ground. That is when you look at alternatives. And they had the bypass pump there for the one thing that they considered would happen, was that all the influent pumps would go down. And again, they submitted the notice as was required. So we believe that they met all of these things.

So if we can have Exhibit 101, page one, please.

So finally, I would ask you to consider consistency. There were many other larger spills. If you look at that top spill right there (indicating). Victor Valley happened also December 19th, 2010 -- 43 million gallons. They were given two cents a gallon,

should recognize that there are options that theDistrict has.

First, to the extent to believe that
there was a negligent third party, such as the Wallace
Group, that can seek contribution from it.

Secondly, the homeowners may have other options to recoup costs for water intrusion claims.

Mr. Horner testified that the District has the ability to pay, and the District can pay this penalty without passing on any fine to its rate payer.

Keep in mind that the District put on hired experts and spent significant legal fees fighting this fee, but continues to risk water quality impact based on Katie DiSimone's testimony.

It is up to you to weigh the credibility of the hired experts versus the witnesses put on by the prosecution team, who included the former CPO, Jeff Appleton, who has nothing to gain by assisting the prosecution team and was present on the day of the spill.

The District presented not a single witness who was present on the day of the spill. The district presented not a single witness who was present at the plant on the day of the spill.

THE REPORTER: Excuse me. Could you slow down

```
please? It's late.
                                                                 1
                                                                              While the prosecution team has not spent
2
                                                                 2
                                                                     significant time during today's hearing on the upset
          MS. MACEDO: I apologize.
3
                                                                 3
                                                                     and bypass defenses, we did cover these defenses in
               Let's look at the experts the District
4
     presented.
                                                                     great detail in our rebuttal brief. The reason we did
5
                                                                 5
                                                                     not spend much time on them is, because it is clear
               RMC used 14 nonflooding events for
6
     comparison. And yet, under the District's permit, it
                                                                 6
                                                                     legally, they do not apply. They apply only to
7
                                                                 7
     is responsible for the discharge of any storm water
                                                                     technology-based effluent limitation, such as B.O.D.
8
                                                                 8
     that mixes with sewage.
                                                                     and T.S.S., and not discharge violations such as this.
9
               Furthermore, RMC presented no adequate
                                                                 9
                                                                              The main issues for the Board to decide
10
     explanation or analysis of Monday's spill. CH2M Hill
                                                                10
                                                                     is that the District did not use proper maintenance.
11
     conducted a peer review of the District's method, but
                                                                11
                                                                     The volume of the spill largely determines the amount
12
     incorporated any errors and unreliable -- unreliability
                                                                12
                                                                     of the penalty, and the District's method is clearly
13
     in the District's volume calculation in its own
                                                                13
                                                                     after the facts.
14
                                                                14
                                                                              After this spill, they then looked around
     conclusions.
15
                                                                15
               Contrast that with evidence that the
                                                                     at the manholes and guessed at what flowed out of them.
16
                                                                16
                                                                     The Board and the prosecution team must use the penalty
     prosecution team presented.
17
                                                                17
                                                                     calculator, per the enforcement policy.
               There were several unresolved issues that
18
                                                                              Any variation of the proposed penalty,
     were known and should have been repaired prior to the
                                                                18
19
     spill. Not just the electrical issue that may or may
                                                                19
                                                                     must use the calculator and the factors. An express --
                                                                20
                                                                     excuse me.
20
     not have been the cause of the overflow, but the wear
21
     on the wires that led to fires because of standing
                                                                21
                                                                              While you can modify the factors to the
22
                                                                22
                                                                     extent you simply want to change the amount of the
     water issues at the plant.
23
                                                                23
               In addition, an SOP related to a valve
                                                                     penalty, you must make an express finding to do so
24
     effective response time on the day of the spill. A
                                                                24
                                                                     under step seven, as required by the policy.
25
                                                                25
                                                                              As the Board evaluates the penalty
     backup pump worked only intermittently. A leaky
                                                                                                                    Page 592

                                                                 5
     question to Ms. DiSimone during cross-examination when
                                                                     Policy.
6
     she asked if it would be better to see money spent on
                                                                 6
                                                                               We thank the board for its considerable
7
                                                                 7
     plant improvements versus penalties.
                                                                     effort in preparing for this hearing, it's thoughtful
8
                                                                 8
              It is disappointing to hear that the
                                                                     questions, and it's anticipated order.
                                                                 9
9
                                                                          MR. YOUNG: Okay. Let's see where we're at.
     District's suggestion that penalties be used as a
                                                                     On my list, we would have a recommendation by the
     budgeting and planning mechanism. If proper funds had
                                                                10
11
     been budgeted and implemented when the problems were
                                                                11
                                                                     executive officer.
12
     first recognized, we would not have to be here
                                                                12
                                                                          MS. JAHR: Right. We should close the public
13
     discussing the District's preference to spend money at
                                                                13
                                                                     hearing.
14
     the plant over penalties.
                                                                14
                                                                          MR. YOUNG: Before that?
15
                                                                15
              The District had the chance in 2004,
                                                                          MS. JAHR: Yeah. The public hearing should now
16
     2005, 2006, 2007, 2008, 2009 and 2010 to invest in its
                                                                16
                                                                     be closed.
17
                                                                17
     plant and it chose not to. It is now too late to avoid
                                                                          MS. MACEDO: Yes.
18
     a penalty in lieu of saying, "Oh, we have upgrades we
                                                                18
                                                                          MR. YOUNG: Okay. Yeah, there's no -- we're
19
     need to do."
                                                                19
                                                                     done with the cases.
20
                                                                20
              However, it is not too late for the Board
                                                                          MS. MACEDO: Yes.
21
     to send the District a message about the importance of
                                                                21
                                                                          MR. YOUNG: Definitely. I thought that was
22
                                                                22
     prompt attention to identify problems and deficiency.
                                                                     kind of --
23
              The Board should enforce this message and
                                                                23
                                                                          MS. JAHR: That's a good thing to do.
24
                                                                24
     approve the ACLC in the amount the prosecution team has
                                                                          MR. YOUNG: Right. We're done with the
25
     requested.
                                                                25
                                                                     testimony portion of this hearing.
                                                     Page 591
                                                                                                                    Page 593
```

TRANSCRIPT OF HEARING

1	MS. MACEDO: Yes.	1	So I hear what you're saying. I
2	MR. YOUNG: In fact, we were even before you	2	understand what you're saying, but I just want to let
3	gave your closing arguments.	3	you know that I may not be available.
4	Okay. What are the recommendations by	4	MR. YOUNG: That's all right. I mean, we
5	the executive officers?	5	have
6	MR. JEFFRIES: Go home.	6	MR. JEFFRIES: I know you have a quorum, but
7	MR. JOHNSTON: Closed sessions.	7	I
8	MR. YOUNG: Well, I think what is obvious, is	8	MR. HARRIS: I think, Mr. Jeffries, if we pick
9	that we don't have the time to deliberate tonight. It	9	something early October, I you know, we can make the
10	is actually tomorrow. It's after midnight.	10	request to the State Board, to the OCC, to make sure
11	We need time to sit and talk to one	11	that if you are not reappointed, that you are
12	another and go over our notes and discuss this. And so	12	allowed to stay on passed that date.
13	it's I don't know how much time it is going to take,	13	MR. YOUNG: There is a grace period.
14	but we can't do justice trying to do it now.	14	MR. HARRIS: Well, that is true, but the
15	So we are going to have to renotice this	15	governor's office is telling everybody to not plan on
16	for a we can't meet otherwise, or we can't get	16	staying through the grace period, so I'm suggesting
17	together on our own and just talk about this. It has	17	that we would make that request to the office of chief
18	to be a noticed hearing.	18	counsel to
19	But we will go into a closed session to	19	MR. JEFFRIES: Well, yeah. I know that you
20	do so, which is how we notice this proceeding. And we	20	have enough people to make a quorum, but I it's
21	can't do it before 10 days anyway.	21	just well, if that was the case, then I wouldn't
22	MS. JAHR: Correct.	22	have sat here through all these hours.
23	MR. YOUNG: And you're not going to be	23	MR. YOUNG: Right. And
24	available for at least 14 days?	24	MS. THORME: I just want to put an objection on
25	MS. JAHR: I will be available October 1st.	25	the record to continuing it for deliberation for many
	Page 594		Page 596
1	MR. YOUNG: October 1st?	1	reasons.
		1 -	
2	MS. JAHR: And after.	2	One, it allows people to look at evidence
3	MR. YOUNG: I'm wondering if we can pick	3	that they might not have looked at if they were had
3 4	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your	3 4	that they might not have looked at if they were had gone into deliberation right now. You give people
3 4 5	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your honeymoon.	3 4 5	that they might not have looked at if they were had gone into deliberation right now. You give people weeks of time. This is why you sequester a jury so
3 4 5 6	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your honeymoon. MS. JAHR: Yes.	3 4 5 6	that they might not have looked at if they were had gone into deliberation right now. You give people weeks of time. This is why you sequester a jury so they don't get to look at other stuff.
3 4 5 6 7	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your honeymoon. MS. JAHR: Yes. MR. YOUNG: while we are together, can we	3 4 5 6 7	that they might not have looked at if they were had gone into deliberation right now. You give people weeks of time. This is why you sequester a jury so they don't get to look at other stuff. The fact that one of the board members
3 4 5 6 7 8	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your honeymoon. MS. JAHR: Yes. MR. YOUNG: while we are together, can we pick a date now to convene?	3 4 5 6 7 8	that they might not have looked at if they were had gone into deliberation right now. You give people weeks of time. This is why you sequester a jury so they don't get to look at other stuff. The fact that one of the board members may not be here, and it's just highly unusual for in
3 4 5 6 7 8 9	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your honeymoon. MS. JAHR: Yes. MR. YOUNG: while we are together, can we pick a date now to convene? MR. JEFFRIES: Mr. Chair, I need to remind you	3 4 5 6 7 8	that they might not have looked at if they were had gone into deliberation right now. You give people weeks of time. This is why you sequester a jury so they don't get to look at other stuff. The fact that one of the board members may not be here, and it's just highly unusual for in this type of a case, for you to put over deliberation.
3 4 5 6 7 8 9	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your honeymoon. MS. JAHR: Yes. MR. YOUNG: while we are together, can we pick a date now to convene? MR. JEFFRIES: Mr. Chair, I need to remind you that through	3 4 5 6 7 8 9	that they might not have looked at if they were had gone into deliberation right now. You give people weeks of time. This is why you sequester a jury so they don't get to look at other stuff. The fact that one of the board members may not be here, and it's just highly unusual for in this type of a case, for you to put over deliberation. MR. YOUNG: Well, I mean, we could have
3 4 5 6 7 8 9 10	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your honeymoon. MS. JAHR: Yes. MR. YOUNG: while we are together, can we pick a date now to convene? MR. JEFFRIES: Mr. Chair, I need to remind you that through MS. MACEDO: Does this have to be on the record	3 4 5 6 7 8 9 10	that they might not have looked at if they were had gone into deliberation right now. You give people weeks of time. This is why you sequester a jury so they don't get to look at other stuff. The fact that one of the board members may not be here, and it's just highly unusual for in this type of a case, for you to put over deliberation. MR. YOUNG: Well, I mean, we could have continued the hearing, too.
3 4 5 6 7 8 9 10 11	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your honeymoon. MS. JAHR: Yes. MR. YOUNG: while we are together, can we pick a date now to convene? MR. JEFFRIES: Mr. Chair, I need to remind you that through MS. MACEDO: Does this have to be on the record for the court reporter?	3 4 5 6 7 8 9 10 11	that they might not have looked at if they were had gone into deliberation right now. You give people weeks of time. This is why you sequester a jury so they don't get to look at other stuff. The fact that one of the board members may not be here, and it's just highly unusual for in this type of a case, for you to put over deliberation. MR. YOUNG: Well, I mean, we could have continued the hearing, too. MR. JEFFRIES: Yes.
3 4 5 6 7 8 9 10 11 12 13	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your honeymoon. MS. JAHR: Yes. MR. YOUNG: while we are together, can we pick a date now to convene? MR. JEFFRIES: Mr. Chair, I need to remind you that through MS. MACEDO: Does this have to be on the record for the court reporter? MR. JEFFRIES: No.	3 4 5 6 7 8 9 10 11 12 13	that they might not have looked at if they were had gone into deliberation right now. You give people weeks of time. This is why you sequester a jury so they don't get to look at other stuff. The fact that one of the board members may not be here, and it's just highly unusual for in this type of a case, for you to put over deliberation. MR. YOUNG: Well, I mean, we could have continued the hearing, too. MR. JEFFRIES: Yes. MR. HARRIS: Right.
3 4 5 6 7 8 9 10 11 12 13	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your honeymoon. MS. JAHR: Yes. MR. YOUNG: while we are together, can we pick a date now to convene? MR. JEFFRIES: Mr. Chair, I need to remind you that through MS. MACEDO: Does this have to be on the record for the court reporter? MR. JEFFRIES: No. MS. THORME: Yes.	3 4 5 6 7 8 9 10 11 12 13	that they might not have looked at if they were had gone into deliberation right now. You give people weeks of time. This is why you sequester a jury so they don't get to look at other stuff. The fact that one of the board members may not be here, and it's just highly unusual for in this type of a case, for you to put over deliberation. MR. YOUNG: Well, I mean, we could have continued the hearing, too. MR. JEFFRIES: Yes. MR. HARRIS: Right. MR. YOUNG: At 6:00, I could have said, we have
3 4 5 6 7 8 9 10 11 12 13 14 15	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your honeymoon. MS. JAHR: Yes. MR. YOUNG: while we are together, can we pick a date now to convene? MR. JEFFRIES: Mr. Chair, I need to remind you that through MS. MACEDO: Does this have to be on the record for the court reporter? MR. JEFFRIES: No. MS. THORME: Yes. MS. MACEDO: Just for the date?	3 4 5 6 7 8 9 10 11 12 13 14	that they might not have looked at if they were had gone into deliberation right now. You give people weeks of time. This is why you sequester a jury so they don't get to look at other stuff. The fact that one of the board members may not be here, and it's just highly unusual for in this type of a case, for you to put over deliberation. MR. YOUNG: Well, I mean, we could have continued the hearing, too. MR. JEFFRIES: Yes. MR. HARRIS: Right. MR. YOUNG: At 6:00, I could have said, we have got to stop. We will renotice this and continue it for
3 4 5 6 7 8 9 10 11 12 13 14 15 16	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your honeymoon. MS. JAHR: Yes. MR. YOUNG: while we are together, can we pick a date now to convene? MR. JEFFRIES: Mr. Chair, I need to remind you that through MS. MACEDO: Does this have to be on the record for the court reporter? MR. JEFFRIES: No. MS. THORME: Yes. MS. MACEDO: Just for the date? MR. YOUNG: Yes. I think it should be on the	3 4 5 6 7 8 9 10 11 12 13 14 15 16	that they might not have looked at if they were had gone into deliberation right now. You give people weeks of time. This is why you sequester a jury so they don't get to look at other stuff. The fact that one of the board members may not be here, and it's just highly unusual for in this type of a case, for you to put over deliberation. MR. YOUNG: Well, I mean, we could have continued the hearing, too. MR. JEFFRIES: Yes. MR. HARRIS: Right. MR. YOUNG: At 6:00, I could have said, we have got to stop. We will renotice this and continue it for a later time.
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your honeymoon. MS. JAHR: Yes. MR. YOUNG: while we are together, can we pick a date now to convene? MR. JEFFRIES: Mr. Chair, I need to remind you that through MS. MACEDO: Does this have to be on the record for the court reporter? MR. JEFFRIES: No. MS. THORME: Yes. MS. MACEDO: Just for the date? MR. YOUNG: Yes. I think it should be on the record, yeah.	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	that they might not have looked at if they were had gone into deliberation right now. You give people weeks of time. This is why you sequester a jury so they don't get to look at other stuff. The fact that one of the board members may not be here, and it's just highly unusual for in this type of a case, for you to put over deliberation. MR. YOUNG: Well, I mean, we could have continued the hearing, too. MR. JEFFRIES: Yes. MR. HARRIS: Right. MR. YOUNG: At 6:00, I could have said, we have got to stop. We will renotice this and continue it for a later time. The objection is just to the deliberation
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your honeymoon. MS. JAHR: Yes. MR. YOUNG: while we are together, can we pick a date now to convene? MR. JEFFRIES: Mr. Chair, I need to remind you that through MS. MACEDO: Does this have to be on the record for the court reporter? MR. JEFFRIES: No. MS. THORME: Yes. MS. MACEDO: Just for the date? MR. YOUNG: Yes. I think it should be on the record, yeah. MS. MACEDO: Okay.	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	that they might not have looked at if they were had gone into deliberation right now. You give people weeks of time. This is why you sequester a jury so they don't get to look at other stuff. The fact that one of the board members may not be here, and it's just highly unusual for in this type of a case, for you to put over deliberation. MR. YOUNG: Well, I mean, we could have continued the hearing, too. MR. JEFFRIES: Yes. MR. HARRIS: Right. MR. YOUNG: At 6:00, I could have said, we have got to stop. We will renotice this and continue it for a later time. The objection is just to the deliberation portion of it, correct?
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your honeymoon. MS. JAHR: Yes. MR. YOUNG: while we are together, can we pick a date now to convene? MR. JEFFRIES: Mr. Chair, I need to remind you that through MS. MACEDO: Does this have to be on the record for the court reporter? MR. JEFFRIES: No. MS. THORME: Yes. MS. MACEDO: Just for the date? MR. YOUNG: Yes. I think it should be on the record, yeah. MS. MACEDO: Okay. MR. YOUNG: Yeah.	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	that they might not have looked at if they were had gone into deliberation right now. You give people weeks of time. This is why you sequester a jury so they don't get to look at other stuff. The fact that one of the board members may not be here, and it's just highly unusual for in this type of a case, for you to put over deliberation. MR. YOUNG: Well, I mean, we could have continued the hearing, too. MR. JEFFRIES: Yes. MR. HARRIS: Right. MR. YOUNG: At 6:00, I could have said, we have got to stop. We will renotice this and continue it for a later time. The objection is just to the deliberation portion of it, correct? MS. THORME: Yes. I just it would be nice
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your honeymoon. MS. JAHR: Yes. MR. YOUNG: while we are together, can we pick a date now to convene? MR. JEFFRIES: Mr. Chair, I need to remind you that through MS. MACEDO: Does this have to be on the record for the court reporter? MR. JEFFRIES: No. MS. THORME: Yes. MS. MACEDO: Just for the date? MR. YOUNG: Yes. I think it should be on the record, yeah. MS. MACEDO: Okay. MR. YOUNG: Yeah. MR. JEFFRIES: I started to say, Mr. Chair, I	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	that they might not have looked at if they were had gone into deliberation right now. You give people weeks of time. This is why you sequester a jury so they don't get to look at other stuff. The fact that one of the board members may not be here, and it's just highly unusual for in this type of a case, for you to put over deliberation. MR. YOUNG: Well, I mean, we could have continued the hearing, too. MR. JEFFRIES: Yes. MR. HARRIS: Right. MR. YOUNG: At 6:00, I could have said, we have got to stop. We will renotice this and continue it for a later time. The objection is just to the deliberation portion of it, correct? MS. THORME: Yes. I just it would be nice to have an end to this sooner.
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	MR. YOUNG: I'm wondering if we can pick MR. JOHNSTON: You are supposed to go on your honeymoon. MS. JAHR: Yes. MR. YOUNG: while we are together, can we pick a date now to convene? MR. JEFFRIES: Mr. Chair, I need to remind you that through MS. MACEDO: Does this have to be on the record for the court reporter? MR. JEFFRIES: No. MS. THORME: Yes. MS. MACEDO: Just for the date? MR. YOUNG: Yes. I think it should be on the record, yeah. MS. MACEDO: Okay. MR. YOUNG: Yeah. MR. JEFFRIES: I started to say, Mr. Chair, I have sat here since 8:30 this morning yesterday	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	that they might not have looked at if they were had gone into deliberation right now. You give people weeks of time. This is why you sequester a jury so they don't get to look at other stuff. TRANSCRIPT OF HEARING

		1	1
1	MR. YOUNG: You were, and you have been taking	1	MR. JORDAN: Yes. So what's the difference
2	notes	2	between a one-hour lunch break and
3	MS. JAHR: I know.	3	MS. JAHR: a sleep break?
4	MR. YOUNG: and you're part of the advisory	4	MR. JORDAN: a nine-hour sleep break?
5	team.	5	MS. JAHR: Because it is really now another
6		6	day. And so you have to notice it for
7	MS. JAHR: I know.	7	
	MR. YOUNG: She's going on her honeymoon.		MR. JORDAN: Okay. But we're already in
8	MR. JEFFRIES: Well, I mean, Mr. Johnston	8	another day.
9	just	9	MR. JAHR: Right. But we're it's part of
10	MS. JAHR: We have ten days. We can't	10	the same hearing. We have not taken a break. Once you
11	DR. WOLF: May I ask a question, because I	11	take that break, really, that eight-hour sleep break,
12	think you bring up a good point.	12	it's really another day. You're not
13	How unusual is it to in similar	13	MR. JORDAN: I'm sorry.
14	circumstances, to split it into two days? I mean, if	14	MR. HARRIS: We have to
15	we looked at similar cases, would we be the exception	15	MR. YOUNG: Come on. Come on.
16	to the rule here? Unheard of or	16	MR. JOHNSTON: Mr. Chair, I have to say, I have
17	MS. JAHR: Generally, I would say a 12-hour	17	a long-scheduled trip to the East Coast that is
18	hearing well, wait, no a 16-hour hearing is the	18	scheduled to start on September 26th, and I'm scheduled
19	exception to the rule. It is not at all unusual to	19	to return on October 10th.
20	continue a hearing when there is no time. And I would	20	MR. YOUNG: Oh, God.
21	say after midnight, depending how long deliberation	21	MR. JOHNSTON: I scheduled it around our
22	takes, it is not unreasonable to continue the hearing.	22	meeting for this hearing.
23	As far as your statement about doing it	23	MR. YOUNG: Are you going to be in California?
24	before Friday, we have to have notice for the meeting	24	MR. JOHNSTON: I'm going to be looking at
25	for ten days prior, so we can't legally do it before	25	leaves change colors in Maine.
			_
	Page 598		Page 600
1	Monday.	1	MR. HARRIS: That is highly overrated.
2	MS. THORME: You can't just hold this meeting	2	MR. JOHNSTON: I'm sure it is. Would you have
3	over	3	a little conversation about that?
4	MS. JAHR: No.	4	MR. YOUNG: And when are you coming back?
5	MS. THORME: and set it for another date	5	MS. JAHR: I come back September 30th.
6	MS. JAHR: No.	6	DR. WOLF: I'm a local. I can be here in five
7	MS. THORME: tomorrow?	7	minutes
8		8	
9	MR. YOUNG: Because we didn't give notice to do	9	MR. HARRIS: How about JeanPierre, once the
	that.	1	harvest season starts, you're not available?
10	MS. JAHR: Right.	10	DR. WOLF: For you, I will go talk to my grapes
11	MR. YOUNG: We have to notice everything we do.	11	and move around the harvest time.
12	MR. JEFFRIES: Well, we didn't notice it for	12	MS. JAHR: We could have
13	today either so	13	MR. YOUNG: Are you if we can have a closed
14	MS. JAHR: Actually, yeah, what happens after	14	session, are you able to participate by phone?
15	midnight?	15	MS. JAHR: In London?
16	MS. THORME: We've got all day today.	16	MR. YOUNG: Yes.
17	DR. WOLF: I just thought I would ask that	17	MS. JAHR: I don't know how much that would
18	question.	18	cost.
19	MS. JAHR: Exactly.	19	MR. YOUNG: Well -
20	MR. JORDAN: Okay. What is the difference	20	MR. JAHR: My phone does not cover
21	I'm sorry.	21	international.
22	MR. YOUNG: Okay. So let's try to figure this	22	MR. YOUNG: There's Skype.
23	out.	23	MS. MACEDO: I do know that it is eight hours
24	MR. JORDAN: I just it's midnight	24	ahead. I do know that.
25	MS. JAHR: It's tomorrow already.	25	MR. THOMAS: She will be
	Page 599		Page 601

TRANSCRIPT OF HEARING

			j
1	THE REPORTER: I'm sorry, but could you	1	MR. HARRIS: Yes. Sorry.
2	identify yourself?	2	MR. JOHNSTON: Damn.
3	MR. THOMAS: I'm Michael Thomas.	3	MR. HARRIS: So you should both download Skype
4	THE REPORTER: Thank you.	4	on your computers.
5	MR. THOMAS: She will be on her honeymoon so	5	MR. YOUNG: Will you be back on the 1st?
6	MR. YOUNG: I understand that.	6	MS. JAHR: Yes. On the 1st, I'm available.
7	MR. THOMAS: We're asking her to	7	MR. YOUNG: On the 1st.
8	MR. YOUNG: It's for two hours. I mean	8	Okay. Is that the best option we have?
9	MR. THOMAS: I think it's an extraordinary	9	MS. JAHR: I don't know anyone else's
10	request.	10	schedules.
11	MR. JEFFRIES: It will	11	MR. YOUNG: Yeah. Well, I mean, I'm concerned
12	MS. JAHR: You know, it's an eight-hour time	12	about waiting that long to do this.
13	difference, so if you want to meet during the day, you	13	MS. JAHR: I know.
14	are going to be meeting	14	MR. YOUNG: And so I really would like to
15	MR. JEFFRIES: It will be noon here and 8:00	15	advance this as much as we can, even if one or two
16	there.	16	people have to call in.
17	MS. JAHR: Yeah.	17	MR. JEFFRIES: We've been discussing this for
18	MR. YOUNG: I mean, what I'm hearing is, it is	18	15 minutes. We could have been deliberating.
19	either we do it before September 26th and you come back	19	MS. THORME: Yeah.
20	on the 30? When do you leave?	20	MR. YOUNG: Well
21	MS. JAHR: Friday.	21	DR. WOLF: I'm still awake.
22	MR. JEFFRIES: Next Friday.	22	MR. JEFFRIES: I suggest that we go into closed
23	MS. JAHR: In 5 days or 6, 7 days.	23	session, and let's see what the board where they
24	MR. HARRIS: Well, the other option	24	are.
25	MS. JAHR: The 17th is the soonest we can	25	MR. YOUNG: Okay.
	Page 602		Page 604
	1 age 002		1 age 004
1	legally notice it, if I got a notice out immediately.	1	MR. JEFFRIES: And if it is not going to work,
2	MR. HARRIS: I was saying, the other option	2	then we will reschedule.
3	would be to I think we can hang on so that	3	MR. YOUNG: Okay.
4	Mr. Jeffries, and we can do without Mr. Johnston	4	MS. JAHR: We need to announce it.
5	MS. JAHR: Or he can also appear	5	MR. YOUNG: The board is going to go into
6	telephonically, if he's willing.	6	closed session right now and
7	MR. YOUNG: All right.	7	MS. JAHR: for deliberation.
8	MR. HARRIS: That's actually a good idea. That	8	MR. YOUNG: for deliberation purposes.
9	would be easier.	9	(Break taken.)
10	MS. JAHR: But he might not be willing to do	10	MR. YOUNG: We'll go back on the record, and it
11	that.	11	is now 12:45 a.m., so
12	MR. JOHNSTON: I'm not on my honeymoon. I am	12	MR. JOHNSTON: It's a new record.
13	hopefully going to have a lot of fun, but I'm not going	13	MR. YOUNG: Yeah. It took us this amount of
14	to be on my honeymoon.	14	time just to decide how to do what we want to do, okay.
15	MR. HARRIS: So you are willing to stand in for	15	So we have not made a decision on the issues. We don't
16	a closed session, Mr. Johnston?	16	have time to do that. We have briefly discussed what
17	MR. JOHNSTON: Yeah.	17	to do, and we all need time to come up with that. It
18	MR. HARRIS: Okay.	18	just cannot be shoe-horned in.
19	MR. YOUNG: Okay.	19	MS. JAHR: I just I'm sorry, I just want to
20	MR. JOHNSTON: Let me ask another question. We	20	clarify. When you say talk about this, you mean
21	have a closed-session meeting noticed for the 18th, I	21	discuss it in a closed session, and not in any other
22	believe.	22	way?
23	MR. HARRIS: But it is personnel issues, it's	23	MR. YOUNG: Yeah.
24	•	24	MS. HARRIS: Deliberate.
	not	l	
25	MD 10HNSTON: It's specified?	125	MID V() IN(C: \N/A ha\/A not hoon able to get to
25	MR. JOHNSTON: It's specified? Page 603	25	MR. YOUNG: We have not been able to get to Page 605

TRANSCRIPT OF HEARING

		1	
1	that yet, because there is too much for each of us to	1	went on. That's nothing that we can anticipate. It
2	share and talk about, and we all have notes. And so we	2	just happens as people testify, and the different Board
3	are going to renotice a closed-session hearing for	3	members have questions that they want to get
4	deliberation for October 3rd at 10:00 a.m., and we will	4	answered.
5	be here in this building to do it.	5	Okay. Thank you very much.
6	MR. HARRIS: For three hours? A closed session	6	MS. THORME: Thank you.
7	for three hours?	7	MS. MACEDO: Thank you.
8	MR. YOUNG: Well, we might as well notice it	8	MR. YOUNG: Good night, and we will see you
9	for longer than that.	9	possibly October 3rd. Okay. We're done.
10	MR. JOHNSTON: Four hours.	10	(Proceedings concluded Saturday 8, 2012 at 12:58 a.m.)
11	MS. JAHR: Notice it for more than three hours.	11	***
12	MR. YOUNG: I would say four hours. Notice it	12	
13	for four hours.	13	
14	MR. HARRIS: Yeah.	14	
15	MR. YOUNG: But that is what so we're	15	
16	protected.	16	
17	MR. HARRIS: Okay.	17	
18	MR. YOUNG: So there is nothing we can do more	18	
19	at this point.	19	
20	But the board is not going to be	20	
21	deliberating at all. We can't talk to each other about	21	
22	this. And so that is kind of the problem that we have	22	
23	to notice this, so we can all come together again, and	23	
24	do the deliberation.	24	
25	MS. THORME: And then will you report out after	25	
	Page 606		Page 608
	- 404 444		
1	that closed session in public?		
2	MR. YOUNG: Yeah. Yeah. I mean, my sense is,		
3	as the chair, we will want to produce an order with		
4	findings in it and rationale. And that may take time		
5	to do. And I'm sure it is going to take time. I don't		
6	know if that can be done during that deliberation		
7	period. So we may have something in writing we can		
8	share. But if we make a decision, we're going to		
9	report that out.		
10	Is there anything else for us to discuss,		
11	Jessie?		
12	MS. JAHR: The only other thing is that the ex		
13	parte rules will apply.		
14	MR. YOUNG: The ex parte rules will apply, and		
15	Board members are free to look at their notes and look		
16	at whatever documents that have been given to them.		
17	But other than that, we're not going to be talking to		
18	one another or to anyone else about this.		
19	So I want to thank everybody for staying		
20	around this late. It went way longer than we thought.		
21	But we were trying to get all the testimony in that we		
22	can and give ample time to both sides, and for due		
23	consideration for what is going on.		
24	I know that a great part of the reason		
25	this took so long is all of the Board's questions that
